Dear Josh:

In some conversations of last summer you expressed interest in variability of sequence in proteins and in thermal proteinoids. Related to those considerations, we have been finding an astonishingly high degree of uniformity in composition in various fractions from DEAE-cellulose, and a new indication of sequential uniformity as well. Those data have been reviewed with F. Sanger, T. Wieland, etc. I am sending some of the data in the event that you may find them of interest.

Sincerely,

Sid
