Cold Spring Harbor (L.I.-N.Y.)

April 16<sup>th</sup> 1958

Dear Dr. Lederberg,

Thank you for your letter dated March 6, that I found on arriving at Cold Spring Harbor last month.

I knew that Stocker had tried transduction by phage in Salmonella but without success. I have been more lucky and I got Colicinogenic transfer by phage lysates. It is however not very efficient and selection of the transformed cells is at the limit of my technical possibilities. I am now trying transduction by phage with Coli strains.

I am now arranging for my travel in June. I expect to arrive in Madison by June 9<sup>th</sup> at 1 or 2 p.m. and spend the afternoon with you. I hope that this date will be convenient for you because my program is very tight as I have only one month to travel to California and back, and it would be difficult to alter the plans.

Are you going to the Chicago Meeting of the S.A.B.? I shall be there and hope to meet you.

I am very sincerely yours  
Koch. Fredericq
