Dr. Joshua Lederberg
Department of Medical Genetics
University of Wisconsin
Madison, Wisconsin

Dear Joshua:

The organism WH-8-Sm unfortunately does not yield its DNA readily in my hands. I've had no success extracting anything with the phenol method which will transform, but there doesn't seem to be much 260 material extracted either. I'll give it one more trial using a method which ruptures the cells and then extract with the Sevag procedure.

Enclosed you will find my curriculum vitae.

With best regards,

Sincerely,

Sol H. Goodgal
