Dear Dr Lederberg,

Greetings to all at Wisconsin!

As you can see, the Hallidays are now back in Brisbane, after a most enjoyable six months in Europe, and are finding it very difficult to "settle down."

I am hoping to get a few simple class experiments going in bacterial genetics, later in the year. Would you mind please sending me some cultures for this purpose?
(+ parent type)
Some auxotrophs of E. coli K12 for recombination, and a suitable Salmonella system for transduction, would be greatly appreciated.

Best regards to yourself and Esther, and also to Bob and Mari.

Sincerely,

Bill Halliday.
