

Otto Kandler,  
Radiation Laboratory  
University of California  
Berkeley, California

Berkeley, February 4, 1957.

Dear Dr. Lederberg:

Thank you very much indeed for your kind letter of February 1. and your interesting papers. The reason for my Berkeley address is that I hold a Rockefeller fellowship for one year, which is almost over now. We leave here on February 21. During my stay in the U.S. I continued my work on photosynthesis and worked for the last few months in the Radiation Laboratory in Berkeley.

On my trip back East I plan to visit Chicago and Madison and would like very much to meet you. The best day for me would be Monday, Feb. 25 and I only hope that this will still be convenient for you.

If for any reason we should not be able to meet now, maybe you are able to extent a trip to Europe some time to Munich, Botanical Institute of the University, Menzingerstrasse 67, where our permanent home is. We shall be back there from about March 25 on.

Unfortunately there is but one set of reprints of our 1954 papers in Arch. d. Mikrobiol. left over. I shall be glad to let you have it for some time and will enclose it; perhaps I can pick it up on my visit.

Looking forward to a discussion I am yours

very sincerely,

Otto Kandler

*Hochachtungsvollen Dank für  
die Güte von Herrn  
Hewmann, mit herzlichster  
Erwiderung*
