Dear Joshua:

It always seems to be later than I think!

Next week I begin the 6th microbe course again (Paul Levine will be away this time) and a week or so later will like to ^{start} do the E. coli exercise. In the meantime I've neglected to transfer the stocks at ^{sufficiently} frequent intervals and they can't be revived. Paul has two of the ones we used last year, W-6 and W-1177, but will like very much to have their "F" reciprocals, W-2163 and W-1817, so that we can do a couple of simple demonstrations of compatibility. Last year everything worked nicely except the aeration

phenocopy -- but it was done
at room temperature, and I
wasn't too surprised. This time
will in some way to give 'em
a chance at 37°.

So. I'd be most grateful if
you could send me the
pair

W. 2163

W. 1817.

It all constitutes a most
satisfying exercise -- both
for the students and for the
instructor!

With best wishes,

Red

John R. Kayser.
