Dr. Joshua Lederberg
Department of Genetics
Stanford University
~~Palo Alto~~, California
Stanford

Dear Dr. Lederberg:

We are interested in obtaining some flagellated, non-motile strains of bacteria such as the strain of Salmonella sandiego and the 3, 15:eh strain reported by Bruner and Edwards in 1946. A letter to Dr. Bruner elicited the information that he no longer had these strains and he referred us to Dr. Edwards. Dr. Edwards has also lost them but suggested that you might possibly have them. If you should have cultures of these flagellated, nonmotile strains, we would very much appreciate receiving transplants.

Sincerely yours,

Louis D. Smith

SMITH, L. DS

I am referring this letter to Dr. Bruce Stocker in London who has been working actively with such paralyzed mutants and could more readily furnish verified stocks. J. L.
