Dear Josh:

At Woods Hole a few summers ago, you suggested to me a chromosomal mechanism to explain the behavior of my non-Mendelizing strep. resistant mutants. I recall that I considered at the time that my data overruled your hypothesis, but now I no longer recall the hypothesis itself.

If you still do entertain that view or any other, as an alternative to the non-chromosomal mechanism which I have proposed, I would appreciate a note from you about it, for I am now in the process of organizing and writing up some recent data on this system, and I wish to consider all alternatives which have been suggested.

With best regards to yourself
and Esther,

As ever,

Ruth
