Dear Josh:

Attached is a preprint of a long overdue paper which I have finally gotten into press. I always disliked this work because I had no inkling of the mechanism of the mutagenic effect, and this is still the situation. However, I am now excited about the work, and happy to get it published, because we have been able to start collecting new types of non-chromosomal ~~mutant~~ mutations, using streptomycin as a mutagen.

I am planning to be in California from November 4-18, thanks to the Cell Biology meeting in San Francisco. I hope you will be at Stanford during this time, and that I'll have a chance for a visit with you and with Esther. My plans are to come down to Stanford for a day or two after the Cell Biology meeting, probably for the weekend.

Looking forward, etc. (as they say in Britain)

As ever,

Ruth

Sager, R.
