

August 6, 1956

Dear Sol:

I've just gotten back from Woods Hole, and am sending you the following cultures forthwith: W-3112 = Lac₂⁻ S⁺ ; W-3127 = Lac₄⁻. Both stocks are F- prototrophs. W-1177, which you may have been using, carries Lac₁⁻. (See CSH 1951). Esther will look over her Cst-Lac⁻ double mutants.

We are hoping to revert to protoplasts soon; if they are not already buried in the mass of stuff on my desk, could you send me the recipes and sample of lipase? I had a nice talk with FitzJames in London.

Sincerely,
