Dear Joshua

Thank you so much for strains and information. Now I can go ahead with experiments. I shall also to gather more critical evidence for SM "induction" of S^+ . Especially because these "mutants" behave like S^+ makers. They segregate in crosses and could be ~~transferred from~~ F^+ used as selective marker for F^+ strains. I am puzzled by that.

I hope Tom will get my letter soon and write to Wakeman. It will be wonderful to have him here

Best regards for Esther and you
yours
Waclaw
