Dr. P. Dorolle
Deputy Director
World Health Organization
Geneva, Switzerland

Dear Dr. Dorolle:

I was most interested to see your article "Old Plagues in the Jet Age" in a recent issue of the WHO Chronicle. I had not before seen such a frank discussion of the possibilities of renewed outbreaks of pandemic disease, an issue whose neglect has troubled me for some time. I would be most appreciative if you would favor me with a reprint copy of this article, and other writings that you may have available on the same subject. I would also be grateful for any bibliographies that might be especially pertinent to it.

Sincerely yours,

Joshua Lederberg
Professor of Genetics
