

March 6, 1975

Mr. David R. Calhoun
Editor
Yearbook of Science and Future
Encyclopaedia Britannica
425 North Michigan Avenue
Chicago, Illinois 60611

Dear Mr. Calhoun,

I just wanted to pass on that the recent conference at Asilomar on recombinant DNA, hazards and opportunities, stands as probably the most noteworthy scientific event of 1975 both from a journalistic and scientific standpoint. I wonder if this has been accommodated adequately in the current volume of the Science and Technology Yearbook, and if not if there might still be time within the next few weeks to enter a special contribution on it.

You may note that I have given special treatment to this subject over a period of several years, I think entirely deservedly.

If you do not already have such a piece, I would be glad to attempt to prepare one if you will let me know the proper word size, room for illustration, etc. ~~Undoubtedly~~ ^{Undoubtedly} deserves between 1 and 2 thousand words for a quick news report, and perhaps next year a more extensive full article.

I enclose a couple of news clippings and an extract from one of my own statements just to remind you of the content - however, this is not for publication in its present form.

Sincerely yours,

Joshua Lederberg
Professor of Genetics
