

Memo from  
JOSHUA LEDERBERG

To: Dave Rammler  
*Syntra*

Membrane factors and antibiotic sensitivity

A very powerful tool would be the isolation of conditional mutants, e.g. temperature-dependent antibiotic-sensitives, to correlate the resynthesis of membrane-components with antibiotic sensitivity.

I hope you can clean up your multitudinous obligations in some finite time; and let me know when you're ready to proceed with a coherent segment of the general program you've outlined.

Have you established a deadline?

-----  
I think you pointed out Cleeland's paper to me (Inf & Immun. 2:371 10/70)  
*of SBact 104: ~~233~~ 323 10/70.*  
*also* *518*  
(thermal transitions).
