

Godel's Theorem or Why I am a scientist

There was once a mathematician named Gödel
who with me while descending into Hell
Said with sardonic smile-
Rodbell,
You should wish for inconsistencies in Life
Then you can avoid all Strife
Because, with their conspiracy you can establish Laws
Provided you hide their intrinsic flaws.
Ah, you say, You believe in Consistency above all
Therein lies your blessed and defiant strength.
Except, my friend, with such stability
You can't prove the measure of anything, including length.
So, with this axiomatic parable -Gödel's proof,
I have become not a spoof,
But a scientist-a kind of
Fantasist.
In this way I can struggle forever without Afront
Struggling but Smiling, Free as a Bird-
Aloof
For to every problem I confront
I can safely say, There is nothing to Proof.
