## CAN DROPSY IN ITS VARIOUS FORMS BE CURED?

This is a question so often asked. When we remember the long reign of in which it has swayed its fearful sceptre; when we reflect that no clime, no age, no sex or condition of life can exempt or even give us partial security against its fearful ravages; when we remember that the young and the old, the good and the vicious, the peasant in his humble hut, and the autocrat upon his gilded throne, are equally exposed and equally susceptible to its unyielding fetters; when we look abroad and trace its destruction back as it has swept over the broad face of the earth, and like a monster of Death, has borne to the tomb thousands and tens of thousands of the fairest and brightest of the human family; when we figure up the long catalogue of victims who have been swept away by its resistless powers, we do not wonder that the question has been so often asked, with deep solicitude, "Is Dropsy a curable disease?"

Read and reflect.

### DR. H. H. GREEN TREATS DROPSY SUCCESSFULLY.

A valuable discovery outside any medical book or published opinion—a vegetable preparation entirely harmless, removes all symptoms of Dropsy in eight to twenty days; cures cases pronounced hopeless by the best of physicians. From the first dose the symptoms rapidly disappear, and inside of ten days at least two-thirds of all the symptoms are removed; thirty to sixty days to effect a permanent cure.

Ten day's treatment furnished free in order that the patient may realize the great merit of my treatment, after which they can pro

ceed with the treatment, or not, as they choose. Some may cry humbug without knowing anything about it, but remember it does not cost you anything to realize the great merits of my treatment for yourself.

Send to Dr. H. H. Green for ten days' treatment, directions and terms. He cures Dropsy in its various forms—dropsy of the chest (hydrothorax), generally called heart dropsy; dropsy of the abdomen (ascites); dropsy of the scrotum (hydrocele); cellular dropsy (anasarca), known as general dropsy, and other forms of dropsy readily yield to

### DR. H. H. GREEN'S TREATMENT.

Some may say your case is complicated and Green cannot cure you; be not discouraged, all cases of Dropsy are complicated, more or less. Dr. Green is constantly curing persons of Dropsy—cases of long standing, complicated cases, cases that have been tapped a number of times, cases that have been worn out by the best of physicians, cases that have been pronounced hopeless by the best of physicians.

Remember, ten days' treatment furnished free.

Under this proposition can any person be wicked enough to cry humbug?

If you order ten days' treatment, send seven cents in stamps to pay postage, and carefully answer the following questions:

1st. Your age. 2d. How long have you been afflicted with Dropsy? 3d. Did you or not have a dry, hacking cough? Do you now cough up a watery mucus? 4th. Is your urine scanty and high colored? 5th. Have you been tapped? If so, how often, and what quantities of water taken each time and its color? 6th. Have you or not great thirst for water? 7th. Have blistered or bursted and dripped water? 8th. Will your fingers leave

pitts by pressing them on the ankles or elsewhere? 9th. How badly are you swollen now? 10th. Where did the swelling commence? 11th. Have you great difficulty of breathing, especially on slight exertions and at night? 12th. Are you frequently aroused at night by alarming dreams, and at the time have a sense of suffocation and great desire for fresh air, throwing open your mouth to breathe? 13th. How are your digestive organs? 14th. Have you a pain or numbness, either from abdomen to thigh, or from chest to shoulder? 15th. Is your pulse generally quick and irregular? 16th. Are your bowels costive? 17th. Can you lie on both sides? 18th. State if any other prominent symptoms. 19th. What is the value of your property?

By answering all these questions I may be enabled to know what kind of Dropsy you have and in what stage. Very few persons have all these symptoms.

### TESTIMONIALS:

MURRAY COUNTY, GA., Jan. 21, 1878.

I hereby certify that about the 15th September, 1877, I went for Dr. Moore, at Tilton, Ga., to go and see my son. On inquiry by Dr. Moore, he told me my son had Dropsy, and requested me to call Dr. H. H. Green, saying he was the man to cure Dropsy. I immediately called on Dr. Green. He and Dr. Moore both came to see my son that evening. On examination, said my son had general Dropsy (anasarca). He was swollen from sole of his feet to crown of his head.

Dr. Green commenced treating him with his new plan of treatment, and in eight or ten days all symptoms of Dropsy had disappeared, and he gained strength rapidly, and is in good health now. I do believe his treatment will cure all cases of Dropsy, if his directions are strictly followed. My son's age, seven years.

JAMES BRACKET.

WALKER COUNTY, GA., Oct. 27, 1877.

I hereby certify that I was badly afflicted with Dropsy of the chest (Hydrothorax), generally called heart Dropsy. It was becoming general Dropsy. My feet and legs were badly swollen. My breathing was very difficult; my pulse quick and irregular. It was thought I could not live a week. About the first of April last I sent to Dr. H. H. Green, of Tilton, Ga., and he commenced treating me under his new plan of treatment, and in the course of ten or twelve days all symptoms of Dropsy had disappeared, and I gained strength rapidly, and soon was able to attend to the domestic business about the farm. I have no return of the disease. I do believe his treatment will cure all cases of Dropsy, if taken in time. My age is seventy-three years.

WM. MYERS.

EATONTON, GA., Dec. 17, 1877.

DR. GREEN—Dear Sir: I wrote you in my last letter that I was going to send you a certificate. In your answer you said if you did not get it by the 15th instant it would be too late, for your circulars would be in print. Was sorry I could not send it to you in time, for I know if I had not commenced with your medicine I could not have lived. I was treated by seven of the best physicians in this country, and all failed to give relief for more than a few hours at a time. I could not lie down day nor night, and had not in eight weeks. When I would go to sleep my breath would leave me, and would have to throw water in my face before I could catch my breath. My clothes were always kept wet by throwing water on me in this way. I was swollen so it looked like I would burst all over. My legs were as large as a common man's body. In fact, I could not walk, eat nor sleep. Would ha lo for breath. Suf-

ferred no one can tell. All my friends gave me out, and in fact I myself prepared, so far as to fix up my affairs, and told my wife how and where to bury me. At last, having heard of your medicine by a friend whom you had cured of heart Dropsy, he induced me to try it. I told him there was no use, as I had tried so many doctors to no purpose. He said he knew you could do me good, and I found it so. I have not kept my bed a day since. I got clear of the water under the influence of your medicine. I attend to my business regularly. At times I feel a fullness in my chest, and then I take a dose or two of your medicine, and it relieves me. I am in great deal better health than I have been for years. I commenced Dr. Green's treatment in March, 1877. If you see proper to use this letter, do so. Yours respectfully,

J. P. JENKINS.

Extract from a letter from P. C. Dill:

CLAY HILL, GA., June 12, 1877.

DR. GREEN—Dear Sir: I make the effort to write to you—the first effort I have made to write to any one in six months. You are a stranger to me, but hope you will allow me to say to you that I shall never be able to repay you for the benefits received from your medicine. Hope you will accept my most grateful thanks for the present. I feel that as soon as I can I must go to Tilton to see you personally. I think I can say, with all truth, that I am to-day a living wonder among all who knew me. There is not a day passes but that some person calls and must have me tell them about Dr. Green's medicine; how it did me so much good after being treated by the best medical talent in the country to no benefit. There are no symptoms of return. There was a little swelling about my feet. I think it was caused by the sores on my legs,

just above the feet. I am entirely clear of any swelling now. I think, in the least, you have reduced my weight, by taking out the water, 98 pounds. I am doing some of the sweetest sleeping I have done for four years, and oh! who knows how to appreciate such a blessing more than one who, for the last two years, night after night, spent sitting on the side of the bed, or up in a chair.

With much respect, your thankful patient,  
P. C. DILL.

—  
CORBINDALE, GA., Oct. 23, 1878.

This is to certify that my wife was badly afflicted with Dropsy. I had a physician to treat her who failed to arrest the progress of the disease, or give her any relief whatever. She was swollen from the sole of her feet to the crown of her head. About the 20th of December, 1876, I sent for Dr. H. H. Green, having heard of his wonderful success in the cure of Dropsy. He said my wife had (anasarca) general Dropsy, and that it was fast merging into jaundice. Said he could cure her if his directions were strictly adhered to. He commenced treating her under his new plan of treatment, and in the course of eight or ten days all symptoms of the disease were gone, and she gained strength rapidly. She has been in good health ever since. Has done her domestic work about the house. Took Dropsy before she was confined. After she was confined the disease advanced very fast. Dr. Green commenced treating her about three weeks after she was confined. I believe his treatment will cure all cases of Dropsy if his directions are strictly followed. His treatment appears entirely harmless, and removes all symptoms of Dropsy like a charm. Her age, thirty-seven years.

L. S. FAITH.

—

TUNNEL HILL, GA., Nov. 20, 1877.

This is to certify that I was badly afflicted with Dropsy of the chest (Hydrothorax). I could get no relief. In March last I called on the celebrated Dr. Linly, one of the firm of Green, Linly & Bentley, of Charlotte, N. C. He said I had a plain case of valvular disease of the heart; that he could not cure me. He gave me a bottle of medicine; said it would regulate my pulse, but it did me no good. I was considerably swollen in chest; my feet and legs were swollen; great difficulty of breathing; my pulse was irregular, and generally quick. I frequently had palpitation of the heart. About the first of April last Dr. Green commenced treating me under his new plan of treating Dropsy, and from the first dose of his medicine I commenced improving. In a few days I had received great relief; in twenty days all symptoms of the disease were removed, and I gained strength, and soon was able to go to work. No signs of return of the disease, and I am in as good health as could be expected. I suffer occasionally with flatulence. I believe Dr. Green's treatment will cure all cases of Dropsy, if possible to be cured. My age, sixty-three years.

JOHN C. FREEMAN.

MURRAY COUNTY, GA., Oct. 20, 1879.

I hereby certify that my son, Wesley Johnson, was badly afflicted with Dropsy. I had him treated by good physicians, and they failed to arrest the progress of the disease, or give any relief whatever. He was swollen from the sole of his foot to the crown of his head; as much, apparently, as the skin would admit of. He could scarcely breathe or speak from pressure on the lungs. About the 10th of October, 1875, Dr. H. H. Green commenced treating him under the new plan

of treatment. In the course of thirteen days all symptoms of Dropsy were gone, and he has remained in good health ever since. I honestly believe his plan of treatment will cure all cases of Dropsy if directions are adhered to. My son is nineteen years old.

RICHARD JOHNSON.

MURRAY COUNTY, GA., Oct. 20, 1879.

I hereby certify that I am well acquainted with Richard Johnson and his son, Wesley Johnson, and know that he has stated facts in the foregoing certificate

B. F. WOFFORD,

Former Representative Murray county.

NEAR RINGGOLD, GA., Oct. 12, 1878.

DR. H. H. GREEN, Tilton, Ga.—Dear Sir: I say that about the first of May, 1877, I was taken down with Dropsy. I had been for several months with a misery at my heart and a shortness of breath. About the first of May, 1877, I called on Dr. Broyles, about as good a physician as there was about here, and he said that I had heart disease, and commenced treating me. I did not mend any; commenced swelling worse than I had been. I told Dr. Broyles I had Dropsy. He said I had, but it was caused by the disease of my heart. I asked him whether the Dropsy caused the heart disease or the heart disease the Dropsy. He said it was the disease of the heart that caused the Dropsy. I continued to swell and get worse. I got so that I could not lie down without losing my breath, and my heart appeared like it would miss a beat in every four or five beats. About the 20th of June, 1877, I happened to hear of your wonderful success in the treatment of Dropsy, and I told the doctor that I was going to send to you. He said he did not think you could do me any good, but that I could do so.

I sent my son to see you, and you sent me ten days' treatment, free of charge. I commenced taking it according to directions. I had not lay down to sleep in five or six weeks before. The second night after I commenced your treatment I lay down about half the night, and the third night I lay easy all night, and haven't been troubled with that smothering at my heart since. That has been about sixteen months ago. I have been able to work ever since I took your treatment. I am confident that your medicine has lengthened my days, for I don't think that I could have lived but a very short time without your treatment. My age is sixty-five years. I will now close. May the Lord give you good success with your medicine, for I believe it will cure Dropsy of any kind.

JOHN HANSARD.

MURRAY COUNTY, GA., Oct. 21, 1879.

I hereby certify that my wife was badly afflicted with Dropsy. She was swollen from her waist to the end of her toes, as much as the skin could possibly admit of. She could not lay down. She could scarcely breathe or talk; it was with great difficulty that she could raise off a chair. She had been afflicted with Dropsy, more or less, for years. Dr. H. H. Green commenced treating her, under his new plan of treatment, about the 20th of April, 1876. The swelling and all symptoms of Dropsy disappeared rapidly. In the course of twelve or fourteen days the symptoms of Dropsy had all disappeared. She gained strength rapidly, and has performed her domestic duties about the house ever since. She is stouter than she has been in several years before. She is thirty-four years old, and the mother of five children.

B. F. MILLER.

EATONTON, GA., Dec. 23, 1877.

I do hereby certify that I was badly afflicted with Dropsy of the chest, generally known as heart-Dropsy (Hydrothorax). The disease made its appearance in the spring of 1875, and advanced slowly. I had good physicians to treat me. They failed to arrest the progress of the disease, and I was in a hopeless condition. I was confined to my bed; my feet and legs swollen as tight, apparently, as the skin would admit; my body badly swollen; I could scarcely breathe or talk from pressure on my lungs; my pulse excited and irregular; palpitation of the heart, etc. Knowing of the wonderful effect of Dr. H. H. Green's treatment in a case of Dropsy of abdomen of one of my neighbors, I wrote to him for medicine, and commenced his treatment about the first of April last. In the course of ten or twelve days I was up and going about, and all symptoms of Dropsy had disappeared. I gained strength rapidly, and in the course of six weeks I went to work, and have continued in business ever since. I am firmly convinced that Dr. H. H. Green's remedy will cure all cases of Dropsy if taken in time, and his directions strictly adhered to. I am forty-six years old.

L. H. GARFIELD.

WALHALLA, S. C., May 9, 1879.

DR. H. H. GREEN—Dear Sir: It is with pleasure that I send you this certificate, which you are certainly entitled to, for the restoration of my wife from apparently a speedy death. I will here give a brief history of her case:

My wife is about 37 years old; gave birth to her fourth child on the 11th of October last. In about ten days was up and attending to the lightest domestic affairs. In a few days, however, she commenced swelling in

the region of the lower part of the abdomen. The swelling soon reached her thighs, and advanced downward, until it reached her toes. It then commenced an upward movement, and soon her hands and face were very badly swollen. In the early stage of the case I consulted a doctor. He gave me a prescription, but it did no good whatever. I then called in the best doctor of the county. He attended on her three weeks, but she still grew worse daily. I then called in another physician; he gave some relief, and said she must be tapped. There had been so many frightful tales of sudden death from tapping told my wife, that she would not consent. But, finally, on the 12th of January, 1879, her breathing became very short and difficult, she consented to be tapped. About one and a half gallons of water was drawn off, which seemed to not be half, from the size of her abdomen. For the next three days we thought she was dying all the time, and in four days she was as full of water as ever. Her doctor seemed puzzled to know what to do, as all of his remedies seemed to fail to give any relief, even tapping. About this time we received about a dozen prescriptions from Indian doctors and sympathizing friends. One of them reduced the swelling a little in the legs. Previous to this, however, one of her legs had bursted, and the water dropped at the rate of about one drop in three seconds, for several weeks. On the 22d of February she was tapped again, and one and a half gallons of water drawn off, and in four days she was about as full of water as ever, and in great pain—had palpitation of the heart, and breathing very hard. I now lost all hopes of her ever getting well. About the 5th of March, the Rev. J. Owens came ten miles to bring one of your circulars to us. I wrote to you at once, and in four days received a sample box

of your great remedy. I consulted our family physician while waiting for the mail which brought the medicine, and asked him if he could not give some medicine to remove the water, and prevent its returning so soon. He said there was no medicine under the sun that could remove the water; he was doing the best he could with the case, and there was no use of him concealing the fact that she must die, as there was no chance of her recovery. He said he would go home with me and tap her again. The mail was now open; I received your medicine, and read the directions; you did not say tap, so I thought this an excellent opportunity to test your claims for your remedy. This, March 9, 1879, she took one dose, and in twenty-four hours about half of the swelling in the legs had assuaged, and a perceptible decrease in the abdomen; the second dose removed nearly all the swelling in the legs, and about half from the abdomen; the third dose removed all the swelling and left apparently no water in the abdomen; and by the time the sample-box was taken, she was up and attending to the lightest household duties, when ten days before we had to carry her to the bed, or to a chair. She was as helpless as a child. Hundreds of people who were acquainted with her case are now greatly surprised to see her up again. She has now been taking your medicine two months, and is apparently well, but at your request, continues to take it to make the cure permanent and sure. I can very safely recommend your remedy for Dropsy, and would advise the afflicted of this terrible disease to apply to you. Wishing you success in your great work for the relief of the afflicted, I remain,

Yours respectfully,

JAMES N. RUTHERFORD.

---

MACON, GA., April 11, 1879.  
 DR. H. H. GREEN, Tilton, Ga.—Dear Sir;

I have used your Dropsy medicine in two bad cases. The first was an old lady with ascites and general dropsy so badly that she had not been able to lie down in bed in two or three weeks. The relief was prompt, and in a few days she was able to take her natural rest, and by the time she had used the first box of Dropsy Balls, she was able to look after her domestic duties.

The second case was a gentleman of middle age. Bad case of general dropsy. His attending physician said all the hope was in tapping, and that could only prolong life. He had been tapped once every three weeks for three times, taking about two and a half gallons of water each time from the abdomen. Being a friend, I visited him, and persuaded him to try your Dropsy remedy, and offered to furnish him the medicine free, if he would only try it. He did try it with the happiest results, and in less than six weeks was able to go out and attend to his professional duties.

From what I have seen, I have no hesitation in saying it will remove the water in every case of Dropsy, and that quickly, if directions are strictly followed, and without that debility we should naturally expect from the free and full aqueous discharges which this medicine produces. The action of your medicine seems to be entirely physiological, drawing the discharge almost exclusively from the surplus water in the system, hence it is not debilitating, as is the case with ordinary hydragogue cathartics, and the most feeble need have no hesitation in using it according to directions.

Many thanks, dear doctor, for the medicine furnished, as it accomplished everything you claimed for it, hence I cordially recommend it to all that have Dropsy in any form, and especially would I recommend the medical

profession to lay aside prejudice for once, and try Dr. H. H. Green's Dropsy Remedy. You can use this letter as you see fit.

Yours, etc., A. L. CLINKSCALES, M.D.

[NOTE—Dr. Clinkscales is secretary and a member of a Medical Board of Georgia, formerly a Professor of Anatomy in a Medical College.]

NELSONVILLE, FRANKLIN Co., ALA., }  
February 1, 1878. }

DR. H. H. GREEN, Tilton, Ga.—Dear Sir: After considerable delay, I proceed to give you a history of my case previous to your treatment of it. In the autumn of 1874, I was taken with a severe cough. In April, 1875, I was suddenly seized with a difficulty of breathing. I seemed to be smothering. I could not lie down at night. If I did so, I had to be raised up frequently to keep me from smothering to death. I called in three of the best physicians in North Alabama. One of them pronounced it asthma, another a disease of the heart, and the other said I had rotten liver. Each of them treated my case according to his diagnosis until my feet and ankles began to swell, then the humiliating acknowledgment was made that it was Dropsy. I then obtained the services of an Indian root doctor, whose treatment improved my condition for a short time, then I was worse than ever before. About the 20th of December, 1875, the erysipelas seized my lower extremities. My condition was then horrible. My legs swelled until they were large enough for two, and were fiery red and as sore as a boil, for boils they were. My right leg bursted in several places, and first and last, a barrel of matter run out of the several openings. About this time I was tapped by Dr. W. W. Weatherford, and about a gallon and a half of water drawn from me.

I then lay down, face downward, and went to sleep, and when I awoke I was wet from my head to my heels. The water ran through both the feather and straw beds on to the floor. In this condition I was hauled to Prentiss county, Mississippi, and put under the treatment of Dr. J. W. Rogers, an excellent physician. He cured my legs of erysipelas, but not the Dropsy. Your medicine removed all the water from me in eighteen days. The water has accumulated a little since, but your medicine promptly removed it. I would have been in my grave long before now if I had not obtained your medicine. You ought to advertise it more extensively, so that all Dropsy patients could obtain it. There is no exaggeration in this statement, except, perhaps, the barrel of matter which ran from my leg, and that is close to the mark. I wish you to print a hundred thousand copies of this certificate, and send them by mail everywhere.

Gratefully yours,

JAMES K. WEST, M.D.

[NOTE—I treated Dr. West in the fall of 1876.—H. H. GREEN.]

FROM JOSEPH MELTON.

PINEAPPLE, ALA., Sept. 24, 1878.

DR. H. H. GREEN, Tilton, Ga.—Dear Sir: I am afflicted with Dropsy, and considered hopeless. Please send me ten days' treatment, directions, etc. My age is fifty-six years; have had dropsy over a year; my urine is scanty and highly colored; my legs pit by pressing on them; my pulse irregular and quick; my bowels very costive. I have had five physicians to try their skill on my case. The last one gave me some relief.

[LATER.]

October 11, 1878.

DR. H. H. GREEN—Dear Sir: Received your letter and medicine. I find it to act just

as you said in your letter. I have only used it six days, and have very satisfactory results thus far. I feel better every way; breathe easier—can now take a long breath; the swelling is greatly reduced; my legs and feet are reduced to about one-half their usual size, and I can take exercise. Find inclosed fifteen dollars, first payment. Please forward medicine at once.

[LATER.]

I am so much better. Am able to ride all over my farm horse-back; took a trip day before yesterday to Greenville, about twenty-four miles, and stood the trip finely. Enclosed find five dollars, which, with the ten dollars sent you a few days ago, makes the second fifteen, and last payment for treating my case. I am about well.

[LATER—FROM DR. DAVID ADAMS.]

PINEAPPLE, ALA., Feb. 13, 1879.

DR. H. H. GREEN, Tilton, Ga.—Dear Sir: I saw Mr. Joseph Melton to-day. His has been an aggravated case of dropsy. I treated him near a year ago with only partial relief, and concluded he would never be better; but to the surprise of every one, since he commenced with your treatment, he has greatly improved. His first symptoms were hydrothoras, with irregular action of the heart, difficult breathing, etc.; then general anasarca, with ascites soon following. He was then very large and an object of pity, spending sleepless nights and days, much of his time sitting on bedside by day and by night. Now he lies down and sleeps soundly all night; can ride out several miles with little inconvenience, and can walk all about his place with comparative ease. You will surely merit some reputation (he is a man of influence) and will add something to your credit in the treatment of dropsy, if you have any aspiration that way.

Yours truly,

DAVID ADAMS, M.D.

From S. G. ROBINSON.

CHICKAMAUGA STATION, TENN., }  
 July 25, 1879. }

DR. H. H. GREEN—Dear Sir: I will write what your treatment did for my wife. She was treated by two physicians, to no effect, in February last. I heard of your success in treating dropsy, and wrote to you. You sent me the medicine, etc. Her breathing had become very difficult. She could not lie down; was badly swollen. I sent for Dr. Joe Gillispie, of Chickamauga, and Dr. Fowler, of Ringgold, Ga., to examine her. They both said she had dropsy; was full of water. And Dr. Fowler said the water was collecting around her heart; that she was liable to die at any moment. I told them of having ordered your medicine, and they both advised me to give her your medicine at once; said it had done wonders, and it might cure her. She commenced your treatment, and in twenty-four hours she could lay down and sleep all night. In six days she was reduced to near her natural size. She took two boxes of your dropsy medicine, and I consider her perfectly cured of dropsy. She would have been in the grave long ago if I had not obtained your medicine, etc.

Respectfully, S. G. ROBINSON.

From WILLARD C. SMITH.

WARESBORO, WARE CO., GA., }  
 May 10, 1879. }

This is to certify that my sister, Martha A. E. Smith, has been badly afflicted with heart dropsy. She was badly swollen; great difficulty in breathing; pulse irregular and quick; bowels costive; could not lie down; had palpitation of the heart. She had been afflicted about twelve months. I accidentally saw a circular of Dr. H. H. Green's, of Tilton, Ga.,

on cure of dropsy, and I at once applied to him to treat my sister. He commenced treating her about the first of January, 1879, and the effects of his treatment were wonderful. She improved rapidly, and in a few days she could lie down and rest well all night. She was able in a short time to be up and attend her house work, and is in good health now. Use this as you see proper. Her age 30 years. Respectfully,

WILLARD C. SMITH, P. M.

From Mrs. JAMES A. COLSON.

QUINCY, FLA., Feb 4, 1879.

DR. GREEN, Tilton, Ga.—Dear Sir: I accidentally came in possession of one of your circulars yesterday. I have been a constant sufferer from dropsy for five or six years; for the last fourteen months words will not express what I have suffered. Death will never be any worse. I made my husband promise where I should be buried, and had no idea one day but that the next I should be a lifeless corpse. Night after night I would sit on the side of my bed and pant for breath—if I dropped to sleep, all signs of breathing would leave me; they would have to stand by and throw water in my face to keep breath in me. Sat up in a rocking chair for six weeks; if I tried to raise anything in my hand, I would loose my breath; my lips would turn almost black. No tongue can tell my suffering. I have been badly swollen for fourteen months; my legs have bursted and dripped water; were sore for five months; all the physicians say I am a living wonder—say my case is very complicated. I am thirty-nine years old. Swelling commenced in my chest; digestive organs not good; pulse quick and irregular; bowels costive. Send ten days medicine, directions, etc., at once.

[LATER.]

March 4, 1879.

DR. GREEN, Tilton, Ga.—Have taken your Dropsy Balls, and must say that so far I have derived great benefit from them. I am feeling very well indeed; swelling nearly all gone. Commenced your treatment on the 24th of February, eight days ago.

[LATER.]

March 12, 1879.

DR. GREEN—I must confess I was very much disappointed to-day in not receiving any medicine from you. Your ten days' treatment did me so much good. The swelling has all left me entirely, but I am afraid it will return. I thought you would let me have time in making payments. Every one who has seen me is perfectly surprised at my rapid improvement. As my case has baffled the most prominent physicians here, they say if you cure me you will gain one of the greatest names imaginable.

[LATER.]

April 12, 1879.

DR. GREEN, Tilton, Ga.—Dear Sir: I feel proud to know that God, through His all-wise instrumentality, has taught some kind physician there was a cure for Dropsy. Our most eminent physicians said my case was entirely hopeless until they saw my radical improvement under your treatment. Thank God, a good friend from Tallahassee has come to my relief, and loans me twenty dollars to send you. Hasten to send me more medicine, as I feel a slight accumulation of water in my abdomen.

Very respectfully,

MRS. JAMES A. COLSON.

ATLANTA, GA., April 27, 1876.

DR. H. H. GREEN—Dear Sir: I now proceed to give you a brief detail of my case of Dropsy. I had Dropsy two years before I

heard of you, and had three physicians to treat my case. I took to my bed the first of December, 1875. I soon became helpless, and had not laid down square on my pillow for several weeks before I took to my bed. I could scarcely breathe, and had slept but little in thirty days from pressure on my lungs. My doctors had pronounced my case hopeless. On the 9th day of January, 1876, my doctors told my wife if she had any talk she wanted to make to me, she had better do so soon, and if she wanted to see me die, to not leave me a moment, for I would die soon—was subject to die in a moment. I had heard of you that day, and I wrote to you about my case. You arrived at my house on the 11th day of January; examined me; said it was a bad case; had Dropsy of the chest, (Hydrothorax,) but if I would take your medicine and strictly follow your directions you could cure me. I did so, and in three or four days I could help myself very well. On the fifth day I went to Mrs. Ransoms', about forty yards, and stayed an hour; on the 14th day I walked to my brothers, two and a half miles, and stayed with him two days, and then walked home quite easily. I continued to take your valuable medicine for about twenty-five days, when all appearance of Dropsy was gone. It commenced leaving from the first dose of your medicine I took, and disappeared rapidly; in fact, it acted like a charm in my case, which was a bad one. I am fifty-six years old; have lived in this neighborhood for fifty-three years; I have been a citizen of this county longer than any person in it. I believe your medicine will remove all dropsical affections from any and all sexes and conditions, whether old or young. In the cure of my case you have made yourself a big name in and around Atlanta. I am now at work in my blacksmith

shop again, and am stouter than I have been for years before. I write this so others can see for themselves, and if they have Dropsy to not delay, but go at once and procure your treatment and live. You can use this as you see proper, but be assured you have my best wishes for yourself and medicine. I must close for want of room.

Respectfully and fraternally,  
 THOMAS M. SMITH.

From W. S. KNOTT.

LEBANON, KY., Feb. 19, 1879.

DR. H. H. GREEN, TILTON, GA.—Dear Sir: Your circular was handed me by our Baptist minister, Dr. Graves. Have had dropsy since October, 1877, and am greatly distressed with the disease. I cough up a watery mucus; have been tapped ten times, the tapping being from three to seven weeks between times, and from two and a half to three gallons of water taken each time; have had my legs punctured and they would drip water. Swelling commenced in my ankles; considerable difficulty in breathing; at times have a sense of suffocation; frequently have a soreness between shoulders, and down my spine; for the last six months my abdomen, feet, legs, back and scrotum swelled very much; my thighs and legs are twice as large as should be, scrotum very large for last six months. I am constantly taking medicine to act on my kidneys and bowels. Please send me some of your medicine, directions, etc., to this place.

[LATER.] March 3, 1879.

Received your valuable medicine last Wednesday. Was greatly surprised at your promptness. Was not getting along as well, was making arrangements to be tapped again the same evening I got your medicine. Commenced taking your medicine as directed,

and from the first dose to the present, I have been greatly relieved, more so than any tapping. Now only six days using medicine, and I must say to you that the water has nearly all left my legs, and greatly reduced in my abdomen. I am relieved of short breathing, or nearly so. I sleep on my back, or either side. Will write you again at the end of the ten days medicine.

[LATER.] March 9, 1879.

DR. H. H. GREEN, TILTON, GA.—Dear Sir: I have taken the ten days' medicine. It has had a very satisfactory effect, for which I return my sincere thanks. I consider your medicine all that you claim for it. I feel assured that I am going to be permanently relieved by your treatment. I send you \$14, all I can get now. Please send me more medicine on receipt of this.

[LATER.] March 26, 1879.

Am still improving. I am satisfied your medicine will cure me, and has been the means of rescuing me, besides I came by it accidentally. When I received your medicine and directions I thought it would prostrate me, but determined to try it, and much relief was received. If I had money I would be willing to give you \$500 for the relief I have received from your valuable medicine.

Yours truly, W. S. KNOTT.

From ALEX. B. SHARP.

GRAYHAMVILLE, S. C.

DR. H. H. GREEN—Dear Sir: I will now give you the details of my sickness before and after your treatment. In Aug., 1877, was taken with pain in left side; called a doctor; he said my spleen was enlarged; said it was as large as a man's head, caused by having malarial fever; he gave me medicine for both but it done me no good, as I had fever continually afterwards. In the spring and sum-

mer of 1878 my stomach seemed to enlarge and I had diarrhoea. I kept taking medicine from one and another, but did the diarrhoea no good. One of my doctors said I did not have a sound organ in my body and advised my parents to send me to Charleston to the hospital. So they sent me to Charleston. The doctor at the hospital told me I had fever cake of spleen and liver, and he would cure me in a short time. I was there from November, 1878, until Jan. 7th, 1879. I went home. I was much weaker than when I went to hospital. A short time after I came home my feet and legs began to swell, and the swelling advanced upward and into my stomach until I thought I would burst. I was almost as large as a barrel. I could not help myself any way, not even turn in bed, and still had the diarrhoea. Deriving no benefit from my physician I gave up all hopes of a cure. It was just then, in February, 1879, a lady sent me one of your circulars. After reading it I at once ordered your ten day's trial treatment. On receipt of your medicine I at once commenced taking your medicine and discontinued the use of all other. It gave me great relief from the first dose. While taking your medicine the people would call in to see me. It was their opinion I could not live, I was so radically reduced by running of the water. The physicians called in to see me and said I would kill myself if I continued taking your medicine, and also told my friends I would not live a week; but talk of that kind could not stop me from taking your medicine, for I knew how much better I felt. I continued following your directions and ordering medicine from you, and I gained strength. In June I felt that I could do light work. In July I went to Grahamville, where I am now. I can do anything I want to and walk where I

choose. I am a wonder to those who saw me when so low. There is no doubt I would have been mouldering in the clay if it had not been for your medicine and God's blessing. I do not believe there is another doctor in the world that can effect such cures as you do. I have gained twelve pounds in the last six weeks; will do what I can to extend your practice. May a blessing be upon you and your medicine. Your humble servant,

ALEX. B. SHARP.

[LATER.]

BEAUFORT, S. C., Dec. 31, 1879.

DR. H. H. GREEN—Dear Sir: I suppose you may be somewhat surprised to hear from me again. Now, doctor, I am working in a machine shop in Beaufort and am feeling well.

ALEX. B. SHARP.

GREEN BUSH, WALKER CO., GA.,

December 20, 1879.

DR. H. H. GREEN, TILTON, GA.—Dear Sir: The effects of your treatment in the case of Jeff New was wonderful. He had had dropsy since September, 1878; had three physicians to treat him. He grew worse all the time. Two of his physicians said he was incurable. When I procured your treatment for in him Aug. last, he was then in a very bad condition; he was badly swollen; had great difficulty in breathing; was nearly helpless, etc. Your treatment relieved radically and he soon was going about, and there is no sign of the disease returning; he is in good health. I heartily recommend your treatment for dropsy to all who are afflicted with that terrible disease. His age is 26 years. Use this as you see fit. Respectfully,

R. C. CUDD.

JACKSON STATION, PIKE CO., S. C.,

December 8, 1879.

DR. H. H. GREEN, TILTON, GA.—Dear Sir:

It is with pleasure that I send you this certificate which you are certainly entitled to for the restoration of my health. I will give a brief history of my case. In September, 1878, I was taken with chills and fever. We called our family physician who is one of the best doctors in our county. In November, 1878, I began to grow worse. Every day my breathing became very difficult. I felt like I would smother to death. I had to set up to get my breath, and I grew worse daily until the first of February, 1879. Then my physician said I had palpitation and must not be alarmed so much. About this time my feet and legs began to swell and I was soon swollen as bad as I could be from my waist down. The doctor's remedies all failed to give me relief. He then said I had dropsy in the worst form, and there were no chance for me. Then we called an eminent physician that lived several miles off. He at once said he saw no chance for me to live. I then had fever two or three days in each week. In July, 1879, all my symptoms grew worse; had very great difficulty in breathing; had great desire for fresh air; pain in my abdomen and in my chest and shoulder; pulse irregular and quick; could not lie down. The doctor said I must be tapped; that would give relief for a short time only. Before this I had my legs punctured. They dripped water a week and was very badly inflamed and give me great pain. About this time a very eminent doctor came from Georgia to see me. He and my attending physician tapped me. It gave me but very little relief. The physician said it was no use for him to come to see me any more, for it was a complicated disease, and all the physicians in the world could not cure me; said he had done all he could do for me. So the family requested this other physician to do all he

could. He said he saw no chance to do me any good. It seemed I would surely smother. About this time a friend stepped in with one of your circulars and told us to read it. We wrote to you at once for a trial box of your medicine. From the first dose of your medicine I found great relief and the swelling and all symptoms of dropsy rapidly disappeared, and I am in better health than I have been for years past. I was under your treatment sixty days through your request, though I felt perfectly well in half that time, and I don't think any one can possibly be any worse afflicted with dropsy than I was when you began to treat me. I would advise any one afflicted with this dreadful disease to send to you for treatment and be cured. I can safely say I believe you can cure dropsy of any kind. My age is 46 years. Use this as you see proper. Respectfully,

N. MEYER.

NOTE—Read the following. It is in connection with the foregoing case:

From DR. A. PRESKITT.

MCBEANS DEPOT, GA., Nov. 13, 1879.

DR. H. H. GREEN—Dear Sir: I was attending a case of General Dropsy some time since at Jackson Station, S. C., and, finding it, as we physicians thought, incurable, I recommended your treatment, as I had previously seen your circular, and the case I fully believe was cured by your treatment, and I now have a case which cannot be remedied unless by you. It has been standing for some time, but no doctor was called until a few days ago when I was called. He is about fifty years of age. So I told him I could not cure him but you could, and promised to write you for him

From DR. JOE A. GILLISPIE.

CHICAMAUGA, TENN., Oct. 1, 1879.

DR. GREEN, TILTON, GA.—For some three years my wife was treated by the best physicians in the country for ascites and disease of the heart with only temporary relief. I had determined on tapping. A friend sent me one of your circulars. To satisfy myself I visited quite a number of your patients. The benefits they received from the use of your Dropsy medicine determined me to give it a trial. The result thus far has been quite satisfactory. She is now, and has been for more than a year, able in part to look after her domestic affairs, with general health much improved, and think her cure would have been permanent had it not been complicated with heart disease. She keeps your medicine and takes a dose every two or three weeks which readily controls the accumulation of water. I would most assuredly recommend to all persons afflicted with Dropsy in all its forms the use of your Dropsy Balls.

CALHOUN, GA., Sept. 20, 1879.

I hereby certify that my grand mother was badly afflicted with Dropsy. I called a good physician to see her. He told me she had Dropsy and did not think she could be cured, as she was old, being in her 76th year, but said he would do all he could to relieve her suffering and make her remaining days as easy as possible. She grew from bad to worse. Her body and lower extremities were swollen until the latter had bursted and water dripped from them. Continually her breathing was very difficult. She had to be propped up to keep her from smothering. Twice she was thought to be dying. Her physician finally told me that she could not possibly live but a short time, and that I need not be

alarmed at her death any moment; that his medicine had ceased to take effect and that her case was utterly hopeless. She had not lain in bed for five weeks, but had to be propped in a chair. She was entirely helpless. About the 10th of last June I accidentally met Dr. H. H. Green, of Tilton, Ga., who said he felt confident he could cure her, and proposed to furnish ten days' treatment free as a test of his medicine, and to the great surprise of myself and neighbors she began to recover from the first dose of Dr. Green's medicine, and after taking the second dose she was so reduced by the running off of the water that she could sleep at night on a bed, and before the ten days' free treatment was out she had gained strength enough to wait on herself at night, and it was no longer necessary to sit with her at night. She is now in moderate good health; has been visiting several times, and last Sabbath, to the surprise of all who knew her, she attended church in Calhoun, a distance of three miles from where she lives. Dr. H. H. Green's treatment did all he claimed for it.

Respectfully, A. M. FRIX.

From N. W. SCOTT.

BUTLER GA., May 24, 1877.

DR. H. H. GREEN—Dear Sir: I went to see T. McGee, of this county, upon whom you certainly have performed one of the most remarkable cures I ever saw; his case of dropsy was a hopeless one, and I found him plowing.

LONDON, OHIO, March 4, 1880.

H. H. GREEN, Tilton Ga.—Dear Sir: I was afflicted since 1875, suffered with general debility until 1877; I commenced swelling; I at once consulted one of the leading physicians in Columbus, Ohio, who pronounced

my trouble Bright's Disease. He gave me the usual treatment for dropsy, (hydragogues), etc.; afterwards I tried two other physicians; I suffered from difficulty in breathing and general weakness. In February, 1879, I concluded to go to Blount Springs, Ala., as my case had become more aggravated; the waters there did me no good. After being there about two weeks, Mr. Williams, general ticket agent of N. & S. A. R. R., recommended me to you as his father had been cured by you. I was so low I almost despaired of getting home, but concluded your medicine would be the last remedy. I sent to you for medicine and went home; I commenced your treatment the 3d of April, 1879; after taking two or three doses, I could sleep well and begin to gain strength and felt better than I had in years. By the last of April I had decreased in weight forty-three pounds by being relieved of the water. My friends and neighbors look upon my cure as that of a miracle. I continued to take your medicine until first of June, and have not taken anything since. I have not the strength of former years, but feel as well as I have in many years. I am at my post in drug store every day, save Sunday. In conclusion, I wish to bear this testimony in the midst of this skeptical world, that I attribute my trip South, and my cure through your agency, to a special providence of God.

What some might call accidental, I attribute wholly to my Heavenly Father's care and guidance. He led me South and He gave that kindness of heart which responded so quickly to the affections of others, which led a stranger to interest himself in my behalf, etc. I remain, yours,

AUBURN SMITH.

I prepare a vegetable pill which is entirely

harmless, and is a sure specific for chills and fever, fever and ague, intermittent fever, etc.; is also a sure preventive of all malarial fevers. I will send a box of these pills by mail, postage paid, on receipt of three dollars; have used them over 20 years; never known a single case where they failed to make a permanent cure.

H. H. GREEN,  
Tilton, Ga.

TILTON, GA., Nov. 19, 1877.

We, the undersigned, do hereby certify that we are personally acquainted with Dr. H. H. Green, of this place. He is a man of standing, and for truth and veracity he is entitled to full faith and credit. And we further certify that the general character and reputation of his treatment for Dropsy is wonderful, and far excels anything that we ever heard of for success:

[SEAL]

W. J. UNDERWOOD, Ordinary.

[SEAL]

H. C. HAMILTON, Clerk Superior Court.

DEAR SIR—

Please read this circular carefully, and send it to some person afflicted with dropsy. By so doing you may be instrumental in relieving suffering humanity, as well as accommodating me. There is no humbuggery about this matter, and my proposition to furnish ten days' treatment free of any charge, and telling what may be expected from the same, ought to be sufficient at least to prompt the sufferers of this terrible disease to try the ten days' free treatment. It is entirely harmless, and costs the patient nothing to realize the great merit of my treatment.

Could furnish hundreds of such testimonials as this circular contains, but it is unnecessary.

In ordering medicine, be sure to answer questions, and send stamp as directed on pages 3 and 4 of this circular. Respectfully,

H. H. GREEN.
