

RELIEVING PAIN QUICKLY with RADWAY'S READY RELIEF

For Muscular Aches and Pains

WARMTH works wonders—when you use Radway's for the relief of pain. Apply it freely, it will not blister, rub the affected part gently or vigorously until the skin reddens slightly and a comforting warmth is felt, and the muscular ache or pain you felt begins to pass away.

Radway's Ready Relief—three R's—is easy to use and is suitable for children as well as adults. It has a pleasant medicinal odor that quickly evaporates after rubbing. Radway's is not oily or greasy; it does not soil the clothing. It is truly the Family Liniment of many uses, for the worker or athlete, for man or woman, whoever has tired, sore muscles to unlimber, or a muscular ache or pain from exertion, exposure or injury to relieve.

This bottle of Radway's Ready Relief, Warmth in a Bottle, will prove to you its time-tested value as a pain reliever that should always be on your medicine shelf, ready and safe to use by every member of the family when needed.

MUSCLES SORE?

From Work? From Athletic Exercise? From Exposure? Try this and see how quickly you can get welcome relief: Apply Radway's Ready Relief freely to the sore muscles. Rub gently or vigorously until a glowing warmth is felt. You will soon feel relieved and refreshed and ready to take up where you have left off.

After a hard day's work or play, when you feel almost too tired to get to bed, see how refreshing and relaxing this can be: A warm shower or tub or sponge, followed by a gentle rub down with Radway's.

Just in from a chilly, wet, blustery day—and you feel that a cold is getting its grip on you: relax in a warm bath; follow it with a brisk rub with Radway's over your throat, chest and back, then quickly to bed for a good night's rest. The chances are better than even that in the morning you'll wake up rested, free from the aches that made you fear the coming of a cold.

FEET GET COLD EASILY? Protect them by increasing the superficial circulation of blood. Rub a little Radway's on your feet before going out on a cold day and repeat when your feet begin to feel cold. Refresh your tired ankles and feet with a stimulating foot bath — a basin of warm water with a tablespoonful of Radway's mixed into it will give quick comfort.

MINOR SPRAINS AND STRAINS. Apply heat as quickly as possible, either by immersing the injured part in hot water or by applying cloths wrung out of hot water. Between applications, rub gently with Radway's Ready Relief. Still better — after massaging with Radway's, cover with cloth wrung out of hot water and place over this a dry cloth to keep the heat in as much as possible. If the sprain is severe, it should have the attention of a physician

as soon as possible, but the application of Radway's is even then a good first aid measure.

TOOTHACHE. When toothache is caused by a cavity in the tooth, a small piece of absorbent cotton saturated with Radway's, pushed into the cavity and repeated as often as necessary, will often keep the pain away until the dentist can be seen.

NEURALGIA. Nerve pain in the face, between the ribs, along the arm or leg, can often be quickly mitigated by the application of Radway's with vigorous massage. The affected part should be covered with hot compresses as suggested in the directions for use.

HEADACHE. Relief of certain types of occasional headache often follows when Radway's is rubbed over the aching part of the head and over the back of the neck, massaging downwards. When headache occurs frequently, a physician should be consulted.

INSECT BITES. Rub Radway's freely over the sore spot. It will aid in relieving the itching, pain and swelling caused by mosquito bites, bee stings, and the bites of other non-poisonous insects.

GAS PAINS. Eating well but not wisely, by inadequate chewing of food, too much fried food, hurried eating, eating when tired or worried—all these may interfere with adequate digestion of the food eaten. Fermentation may occur, producing gas. By pressing against the walls of the stomach, and especially of the intestines, this gas may cause great discomfort and even pain. One half to one teaspoonful of Radway's in a half glass of water, generally brings early relief from gas pain. The water may be warm or cold, but warm water is preferable, and it may be sweetened or unsweetened. Repeat the dose in an hour, if necessary, for three doses.

Comforting Warmth
in a Bottle

FOR USING RADWAY'S READY RELIEF
TO BEST ADVANTAGE

follow these directions:

EXTERNALLY.—Apply the RRR freely to the affected part, then massage gently or vigorously until the skin glows and a sensation of heat is obtained. When a stronger and more prolonged action is desired, first apply a towel wrung out of hot water. Remove the towel while still warm, then rub in the liniment. Cover with a dry towel or cloth. Radway's will not blister. It is not oily or greasy, and does not cause permanent staining of clothing. For children and those with unusually sensitive skin, the liniment may be diluted with equal part of water.

INTERNALLY.—Mix one half to one teaspoonful in a half glass of water. The water may be cold or warm, and may be unsweetened or sweetened to suit the taste. Repeat the dose in an hour, if necessary, for three doses.

CAUTION. Keep away from the eyes and from open wounds as it may cause temporary unpleasant smarting.
