

Introductory Lecture on the Opening of the
Forty-fifth Session of the Medical Faculty,
McGill University.

Oct 1st, 1877.

by

William Osler M.D.

Professor of the Institutes of Medicine

Gentlemen of the Faculty.—

The duty of delivering the introductory lecture has this year fallen to my lot, and however opinions may differ as to the necessity or advisability of beginning the session with such an address, there can be no doubt of this — that it affords an opportunity, rarely given, of offering to the assembled students words of welcome, advice and encouragement — an opportunity, the responsibilities of which come home to one with the thought of these young and eager lives just entering upon the serious work of life, and to be influenced for weal or woe, perhaps by what the introductory lecturer may say, and most certainly by what we as a Faculty do.

2

Students of medicine, — My first duty, then, is
to bid you on behalf of the Medical Faculty a
heartily welcome; and I do, ^{so} most sincerely, feeling
sure that I express the sentiments of every
one of your teachers when I say that you
come now into the society, not of mere Professors
who will lecture at you from a distance,
but of men who are anxious for your
welfare, who will sympathize with
your difficulties, and also bear with you
in your weaknesses. I can offer no better
welcome than to tell you this. I see among
you many with whose faces we are
all familiar, who return, and not for the
first time, to these benches. To such, words
of welcome are superfluous; I will only
say we rejoice to see you back, we trust
with refreshed bodies and invigorated
minds, to pursue the work of the session.
To those of you who for the first time occupy
seats in this classroom, the occasion is a
memorable one, to which I trust you will
look back in after years with exceeding
pleasure as the starting point of a career
of usefulness and honour. For you we have a

3

special sympathy. Look upon us as elder
brothers to whom you can come confidently
and fearlessly for advice in any trouble
or difficulty.

On such an occasion as the present it is
natural that you should expect to hear
from me something about the profession of
your choice, its position, the prospects it holds
out to you, and the relations that you as
students bear to it. Probably there are few
among you who could give a very logical
explanation of the causes which induced
you to adopt this in preference to other
callings, with one there has been the influence of
a friend; with another, perhaps, hereditary
predisposition; with a third a sudden
inspiration; with another that innate
enthusiasm for the science which is
akin to the natural gift that makes of
one man an artist, and then a musician
an inborn natural fitness for that special
work, which the man's surroundings,
whether fostering or adverse, can neither
give nor take away. From these causes
our greatest men; for others it matters
little in what way the impulse has
come, so long as the feeling now possesses

4
you, penetrating every fibre of your being, that
this above all others is the profession you can
most heartily embrace. If however, any
man of you here enters upon it with the idea
that it will do as well as another, that
other will most probably be better for you.
Lukewarmness, bad enough at any
time, is simply fatal at the beginning,
when it usurps the place of that enthusiasm
in you that should bend the man's whole
nature to serve him willingly in the work
that he has chosen.

In addressing a few words to you on
the position which the medical profession
at present holds, I must admit that
different ^{men} hold very different views
on the point. Some will tell you that the
profession is underserved, underpaid,
unhonoured, its members social drudges
- the very last profession they would
recommend a man to take up. Listen not
to these croakers: - there are such in
every calling, and the secret of their discontent
is not hard to discover. The evils which
they deprecate, and ascribe - it is difficult
to say to whom, - in themselves do lie, - evils,

5
The seeds of which - were sown when they
were as you are now; sown in hours of
idleness, in inattention to studies, in
consequent failure to grasp those principles
of their science without which the practice
of medicine does indeed become a drudgery,
for it degenerates into a business. I
would rather tell you of a profession
honored above all others; one which, while
calling forth the highest powers of the mind,
brings you into such warm personal con-
tact with your fellowmen that the heart
and sympathies of the coldest nature
must needs be enlarged thereby. For consider
the practical outcome of all the knowledge
you gather; the active work for which
your four years' study is a preparation.
Will not your whole energies be spent in
befriending the sick and suffering? in
helping those who cannot help themselves?
in rescuing valuable lives from the
clutches of grim disease? in cheering the
loving nurses of the sick, who often hang
upon your words with a most touching
trust? Ay, and in lessening the
sad sense of human misery and pain by

spreading, as far as in you lies, the knowledge and appreciation of those grand laws of health transgressed so ignorantly and yet avenged so fatally?

It cannot be denied that, (excepting the clerical profession, the members of which, in this country at least, can seldom look for the fruit and reward of their labors on this side Heaven), there are fewer great prizes open to the medical man than to others from whom a long and special training is demanded. He is not raised to command his fellow men; his name is not immortally in history and song like those of the gallant veterans who wear her Majesty's uniform, and risk their lives for their country and Queen; he does not sit among the judges of the Land; the high places of brilliant statesmanship are not for him; while the world at large can reward him with but little beyond a successful practice, in which every dollar he earns represents its equivalent in hard, continuous, work. But while the soldier & statesman win honour & fame, the family physician

7

will draw to himself the love and gratitude of manifold hearts; he will have no enemies martial or political; and his labours, if directed by a wise and prudent skill, will be for the welfare and benefit of all. Such honours as are open to him lie chiefly within his own profession and the small circle of the scientific world. Among these his name may be as a household word, his opinions may be quoted as conclusive, his writings become standard works; and these honours are very real and very satisfactory. I need only quote such names as Harvey, Hunter, Jenner & Virchow, to show you what I mean. But let the student remember that while influence of party may advance a man in other professions above many superior to himself, the hero in medical research must wholly depend upon his own deservings. To take a foremost place in the wary and critical field of science he must excel.

And these remarks naturally bring me to a consideration of the state of the profession in this country.

x x x x x x x x

Turning from these matters of

5

medical politics, let me try to answer the
question which has, I am sure, come to each
one of you more than once in the past few
days, "How shall I best occupy my time?" To
answer this I take to be one of the chief uses
of such a lecture as the present. To those of
you who now begin the study of medicine
this is an all important period, for what
^{you} do this session will probably be an index
of what you are capable of doing, and
will certainly have a great influence on
your college career. Five subjects will
mainly occupy your attention: anatomy,
physiology, chemistry, materia medica,
and botany. The three first constitute the
framework of medical science, a portion
of which must this session be put together
— and allow me to indicate how much.
In anatomy you should confine your
attention to mastering the bones, ligaments
and muscles, their general arrangement,
individual peculiarities and mutual
relations. Do not attempt to do more, but
try to accomplish this

x x x x x

Those who like can take up the structure
of animals, zoology and comparative

anatomy, instead of botany, and I have been surprised that so few men do so, for the grasp of principles obtained in a careful study of the form and nature of animals, and the bearing of this upon human anatomy and physiology is more valuable in my opinion than the benefit derived in materia medica from a previous course of botany.

One thing however, do not attempt to take both; you have not time for that.

Shall you attend lectures in any of the final branches during your first year? Most emphatically, no! It would be as reasonable to ask men to listen to lectures in Germany when they did not know the language.

Some of you now

The question whether the first year student should see hospital practice is different, and one upon which there is less agreement; some believing that he should defer this until his second session others that he should begin at once. I hold with the latter. An hour spent daily in the out-door department of a hospital in attentively watching the examples of disease brought in will do much, especially if combined with a little

10

instruction, towards educating power of observa-
tion in a student, and giving him a general
idea of the names and appearances of many mala-
dies; while everyone of you can learn within
the next few months to detect fluctuation
in an abscess, and how to open it; to recognize
crepitation in a fracture; and to master
many other little details, which you cannot
know too soon. My advice to you then on
this point is, attend the out door department
of the hospital when you can; the time
11.30 to 12.30 is very convenient, ex-
cepting when you have dissections to
do in the morning.

From these remarks you will see clearly
that a very full programme is prepared for
you, and it is for each one of you to set about
the task with energy and determination. Grad-
ually these difficulties will vanish which
at first appeared insuperable. I remember
well, when beginning the study of medi-
cine, — it is but ten years ago — with
what enthusiasm I took my Gray's
Anatomy, and attempted to master the
structure of a cervical vertebra, and
though I succeeded in making a little

11
headway, yet the matter seemed so very difficult
— the bones were, ^{indeed} so very dry — and, turning
over the leaves of that ponderous volume, the
subject of anatomy appeared so vast, that
my heart sank within me and I felt
despondent. You, ^{also} will also have moments
when the way appears rugged and the
outlook dark, but never fear; others have
succeeded in the face of the same difficulties,
and with patience and perseverance
you will do so too. Banish the future; live
only for the hour and its allotted work.
Think not of the amount to be accomplished,
the difficulties to be overcome, or the end
to be attained, but set earnestly at the
little task at your elbow, letting that be
sufficient for the day; for surely our plain
duty is "NOT to see what lies dimly at a
distance, but to do what lies clearly at hand."

To the second third & fourth year men
among you x x x x

And now let me add a word ~~upon~~
of advice upon the method of studying.
The secret of successful working lies
in the systematic arrangement of what
you have to do, and in the methodical

arrangement of it. performance of it. With all ^{1/2} of you
this is possible, for few disturbing elements exist
in the student's life to interrupt the allotted
duty which each hour of the day should possess.
Make out each one for himself, a time table
with the hours of lecture study and recreation,
and follow closely and conscientiously the
programme there indicated. I know of no
better way to accomplish a large amount of
work, and it saves the mental worry
and anxiety which will surely haunt
you if your tasks are done in an irregular
and desultory way.

The science and art of medicine is
progressive, therefore colleges and teaching
bodies, representing as they do the embodiment
ment of it, must progress with it, and that
on several lines. Not only must the results of
practical and scientific labour in the
different departments be incorporated in the
lectures, so that in every subject the teaching
may keep pace with the times, but new
and better methods of instruction and
examination must be adopted, and many
other improvements which shall be for the
benefit of the student. At this more
than at any other time in the history
of the world within the last fifty years

13

the leading minds in the profession are occupied with the subject of medical education, and there is an almost universal feeling that in many quarters reform is needed. It is probable that the next decade will see radical changes in the modes of tuition, while practical work will be introduced more & more largely into every department. With all beneficial reform the Medical Faculty of McGill University will sympathize, asking her students to participate therein, believing us in stereotyped forms but in steady onward progress, convinced that

"On our heels a fresh perfection treads,
born of us
Fated to excel us."

For some recent changes I would briefly call your attention, and first to the practical examination in anatomy. Though it has always been customary for the Demonstrator to test the knowledge of the student on the subject, and while the oral part of the subject was made more or less practical, yet it was felt that something more might reasonably be expected of you. Therefore, examinations have been

~~Modelled~~ established, modelled after those of the ¹⁴ Royal College of Surgeons of London. Nothing will give you greater confidence when you enter on practice than an intimate acquaintance with anatomy, and that you can obtain to perfection in our dissecting room. The advantages in this branch are very great, remember that we shall look for proportionate effort on your part.

The abolition of Theses is a change which I am sure you will all appreciate. They were relics of the past, and though formerly they might have been an important means of ascertaining a man's capacity and judging of his fitness for a degree, this is now done in other and more effective ways, and the Thesis had degenerated, as a rule, into a very inferior medical essay quite devoid of originality. At universities where the degree of Bachelor of Medicine precedes the Doctorate the writing of such an essay for the latter seems reasonable, but where, as at McGill, the M.D. is granted at once, it is superfluous. The report goes with it. "Defence of Theses" is no more, — a day regarded by candidates with very mixed feelings; an uneasy nervousness about one's own effort, and the criticisms that would call forth; and a natural curiosity,

to hear the comments upon productions of better students. The day, as a rule, was productive of little good, for the Theses were rarely defended and the best that can be said about it is, that it was sometimes a pleasant gathering. Many a joke has been made, and much laughter excited over the mistakes of the unfortunate competitors, but occasionally a sensitive spirit has been unintentionally bruised, and ^{it} has left ^{him} with feelings of bitterness which would long wear that pleasant and affectionate remembrance of his university life which we would fain have each one of you carry with him to the end of his days.

At the hospital the attendance is increased to 78 months, while very important changes have been made in the clinical department whereby the method of teaching has been more systematized. Instead of having clinical medicine daily in the first three months of the session, and clinical surgery in the last, arrangements have been completed under which the two classes will be carried on simultaneously throughout the six months course. The class taking clinical medicine and clinical surgery on alternate days, having in each subject one lecture weekly in the theatre & three demonstrations at the bedside. You will find this plan greatly

conducive to your advancement, and I look upon it as ^{the} strengthening of what has always been a strong point in this school, a point upon which the reputation of any school must mainly depend, viz: - the efficiency of its clinical teaching.

And further, it is no longer taken for granted that you will compound medicines during the summer months either at the hospital or with your preceptors, but you are compelled by law to spend at least six months in so doing, and to present a certificate for the same before qualifying for your degree at the university.

And lastly, the amount of material at our command will enable us to extend the pathological teaching of the school. The system we have followed heretofore was good, but incomplete. It is impossible to instruct students how to perform post-mortems and at the same time to demonstrate fully to them the lesions met with. I purpose this winter establishing a weekly demonstrative class, in imitation, however feebly, of the course conducted by Virchow in Berlin, in which the material collected may be made thoroughly instructive to the final men among you.

I trust the Medical Society, established during the past summer session, may receive your hearty support. To those of you who take advantage of it the benefit will be inestimable. It affords opportunities which after graduating

11

you can never have, of learning how to prepare papers and to express your ideas correctly, while it is also a training in the difficult science of debate.

To a man who has made his start in life, who having chosen his path is now following it day by day, there is something heart stirring in the sight of a number of young men, such as those who are gathered here, just entering on the race which they will run with such varied powers, with such different results, in the busy arena of the world. For he knows that on an occasion, ^{like this} their hearts must be swelling with thoughts of the future, and of all that it may be to them. What high hopes swell the breasts before him! What earnest resolves are hidden behind the brave young faces! What steadfast aims are set as the goal which shall reward the worker for each "passionate night endeavour" that he makes! Surely, such thoughts are to each man among you as a trumpet call, summoning the young recruit to fall with his rank in the battlefield of life. And further, like some of our familiar melody running through the clay of martial music, the thought of home must needs mingle with all others, till the

Students' fondest hope is the hope that he may be the pride of those who have cherished him from his childhood, his firmest resolve the resolve to do nothing unworthy of their trust in him, his holiest ambition to satisfy their long desires for his welfare and advancement.

To the younger ones in such an assemblage as this who are but just entering on college life, the new sense of liberty is paramount. No longer subject to the narrow rules of schoolboy days, and to the penalties that enforce them; released from the fetters, but no less real, restraints of home; bound only by the laws of his Alma Mater, which demand little from him that he would not willingly give. The youth feels himself for the first time his own master, and the sense of freedom rouses the growing manhood within him and gives impulse to that self-reliance and independence of action that in after years brace the man for the responsibilities of life, when the power to choose is no longer a delightful novelty, but an anxious care.

So much for the inspiring feelings which animate the student at the beginning of a fresh course; but I am sure many can bear me out in saying these are

not all. The fear of failure underlies every effort, and this fear must be especially present to those who run the competitive race of a university career, in which a man naturally desires not only to reach the standard which shall secure him his degree, but also to take a high place among his fellows. This fear of failure abides with some, paralyzing their energies and growing more burdensome as time wears on and their best day is near. But let the student take courage; for though in the nature of things only one man can carry off the highest honours, I doubt if there be one among you who cannot come out well if he will only work as he ought.

x x x x

Why is it that some barely pass who should come out with flying colours? Why do others fail altogether? Not as a rule from want of mental capacity; not from a lack of the bodily stamina necessary for a severe course of study; but rather from a failure in steadfast perseverance. Men begin well; they are diligent in their attendance at lectures, they throw their hearts into their practical work, they rise early and late, but after a time the old

Temptation comes over them, a temptation as old as human nature itself, one that assails every age and every path in life, the temptation which the old Israelites felt when "The soul of the people was much discouraged because of the length of the way." Men get tired of continuous study, their hearts grow sick under the monotonous daily grind. The more buoyant spirits feel their youth and health strong within them, they relax their rules, they go into Society, they begin to spend their evenings in ways more pleasant than in the dry digestion of books; the hard bit of reading is hung over, the looking up of the lectures notes is put off. "What matter", they think, "it can soon be made up." And so the man becomes an idle man, halfhearted in all that he does, and the grand powers within him lie fallow for want of that earnest ~~perseverance~~ persistent exercise of them which alone can bring out their latent strength and make the student all that he ought to be.

But it would not be fair to attribute all failures to this cause. There are some men who fall short, not so much from want of applica-

as from lack of hopefulness. They do not remember their reading as they wish; they do not grasp scientific principles as they expected; the difficulties thicken; they grow somewhat bewildered by the extent and variety of knowledge required and at last give up in despair that enormous effort which alone can carry them through. "What is the use," they say, as they shrink the harder points, and lay the blame on the system of instruction which should fall on their want of confidence in themselves. They are commonly men of no brilliant talent, yet their brains would serve them faithfully enough if they would only put forth their ^{best} effort.

Let such believe the truth of that fair average abilities, well used, often carry the owners far above the heads of able men — the genius rarely makes a successful practitioner; but the careful plodding student who feels that he must grind up his subject with plodding before he can make ^{effort of himself} ^{pauses}, and who acts on this impression, develops the elements of life-long success in his academic course.

To each of you, gentlemen, I would give the same advice. This feeling of disgust and weariness in study, this disheartening

22

sense of want of progress, is natural; be prepared for it; meet it like a man; the mere effort will draw out the energy you hold in reserve, and you may find, perchance, as many a student has found before you, that the duties taken up with distaste become attractive in the doing them, if only from that sense of victory over the lower self which is, I suppose, the one of the most exhilarating and comfortable feelings a man can have.

Never lose sight of the end and object of all your studies, the relief of disease and the alleviation of suffering. Some of you will soon be placed in the chamber of the sick, by the bedside of the dying, and the issues of life and death may be in your hands. Think of this now, and while you have time use your talents aright. Your lives will be a constant warfare against a common enemy, implacable, often irresistible, who spares neither age nor sex, and who, too often, as the memories of the past week remind us, turns and bitterly avenges the victories of those who have many a time snatched victims from his grasp.

*

Gentlemen, our meeting today

is a sad one, for sorrow is in all our hearts
 One* who had endeared himself to us all has
 passed to that shadow land, which sooner or
 later awaits each one of us. Stricken down in
 the flower of his manhood, checked almost
 at the outset of his professional labours,
 it is inexpressibly sad that this fine life, so
 full of promise, should have thus ^{been} suddenly
~~been~~ removed. This day week his cheerful,
 honest face was seen in the hospital ward,
 — today the mourners follow his body to the
 grave. I need not recount to you who have
 appreciated his uniform kindness in the
 hospital his many good qualities, nor need
 I speak of the talents to which our university
 awarded her highest honours; I will rather
 dwell on the deep regret of the profession at
 the loss of one whom we were proud to number
 among us, and ask the students to imitate
 that zeal and faithfulness which marked
 his short career, and which will long
 make his memory beloved and honored among
 those he served.

In conclusion, gentlemen, let me urge you
 all to work diligently in pursuit of that

* Dr. Chise, House Surgeon, M.S. H.

Thorough knowledge of the science of medicine, which alone will make the practice of it satisfactory. And above all things do not regard the profession of it ~~as~~ as a mere means of earning a livelihood, and so enter upon it simply as a business. It is indeed a pitiable sight to see a medical man neglectful of the higher interests of his profession, and given over wholly to the pursuit of wealth.

Remember, you enter upon a glorious heritage; you will reap where you have not sown, and gather where you have not sowed, and the knowledge which it is your privilege today to acquire so easily has cost others much. We are all of us debtors to our profession: let us then, being mindful of those that come after, endeavour to add our little payments to the pile.

And now, remembering that we have other duties towards you than reaching the details of your profession, I would on this occasion earnestly impress upon you the necessity of living upright, honest, and sober lives. The way of the medical student is

beset with many temptations, and too often the track he leaves is marked by as many lapses; a zigzag path, "to right or left, eternal seaward." Above all things be strictly temperate. I will not say that you are in duty bound to give up the use of stimulants altogether. — though my convictions on this point are very strong — but this I do say, that the slightest habit of over indulgence is as the small flaw in some dyke that forms the barrier to a mighty flood, which widening that flaw day by day, sooner or later draws every fair promise, and brings inevitable ruin.

To the thoughtful among you the speculative aspect of modern science will sooner or later prove attractive. Do not get entangled too deeply. I would rather give each one of you good old Sir Thomas Brown's advice: not to let these matters stretch you *pro materia*. Lastly, you will not only be better, but happier men, if you endeavour to do your duty day by day, not from any outside aim however high, but simply because it is right.

Content to let the reward come when it will.

"Knowest thou Yesterday, its aims and reason?"

Worked thou Today for worthy things?

Then calmly wait Tomorrow's hidden season

And fear not thou, what hap so-e'er it bring?

(From Series I. Collected Reprints.)
