P R O C E E D I N G S

1  
2 CHAIRMAN OSBORN: Good morning. I think we'll  
3 get started, even though I know that there are some other  
4 people who will be joining us -- lots of other people  
5 will be joining us. Anybody who has spent any time  
6 watching out the window understands why they're late, and  
7 I guess those of you who came from outside the window can  
8 tell us even more about it, because I guess it's quite  
9 icy, and in the sense of accidents and stuff. Thanks for  
10 the hearty few who have arrived already, we appreciate  
11 it.

12 I'm June Osborn. I'm chairman of the National  
13 Commission on AIDS, and I thought after some conversation  
14 with a few people last night it would be worth taking  
15 just a minute to explain to you that we are not the  
16 Presidential Commission on AIDS, because that's a common  
17 source of misunderstanding. At the risk of boring you  
18 with a little bureaucratic history, the Presidential  
19 Commission on AIDS was created by President Reagan in  
20 1987, and in fact, done a heroic job over the course of  
21 the year in compiling a study that itemized in great deal  
22 a lot of things that needed doing to improve the national  
23 response to the pressures of epidemic of HIV and AIDS.  
24 But it was a one-year commission. It was decommissioned  
25 promptly, and in the context of that, the Congress felt

1 that there needed to be a more durable structure, and one  
2 in which there was considerably more independence on the  
3 part of the Commission, in order to give previews and  
4 well spoken views about what needed doing as time went on  
5 in the epidemic, conforming much more closely to the kind  
6 of commission that had been advocated by the National  
7 Academy of Sciences and Institute of Medicine in their  
8 1986 report called Confronting AIDS.

9 So it was in the context that the National  
10 Commission of AIDS was created -- on AIDS was created by  
11 an Act of Congress in 1988. And it stipulated, in order  
12 to try and achieve that kind of independence, that five  
13 members would be appointed by the Senate, five by the  
14 House, and two by the President, and then three Cabinet  
15 secretaries were ex-officio non-voting members of the  
16 Commission, the Secretaries of Health and Human Services,  
17 Defense and Veterans Affairs.

18 Further, it was stipulated that that Commission  
19 should elect its chairman, and that is how I became  
20 chairman. And Dr. David Rogers, who can't be with us at  
21 this meeting, was elected Vice-Chairman. And we began  
22 our work after all the appointing and electing and  
23 whatever was done. We got Maureen -- persuaded Maureen  
24 Byrnes to become Executive Director of the Commission,  
25 after her distinguished career in the health issues in

1 the Senate as one of the chief staff people, the chief  
2 staff person in health for Senator Rieker.

3 We began our work in August of 1989, and the  
4 final detail that may be of some interest is that we were  
5 appointed for an initial two-year term, renewable on  
6 request of the President. We note with interest that we  
7 are written into next year's budget, which suggests that  
8 we will probably continue beyond our two years, but we  
9 are coming to an interval where we are -- we can perceive  
10 the language of the bill that created us to request a  
11 substantial report on our first two years of work. So  
12 we're in the final stages of sort of data gathering and  
13 seeking input from people around the country as we  
14 prepare to submit a substantial two-year report.

15 Some of you may have seen we have not felt  
16 constrained only to submit substantial two-year reports,  
17 and we have reported at intervals as we have topics that  
18 we feel require considerably more pressing discussion,  
19 and will continue to do that. So we are not just  
20 settling into a mode of only weighty documents that  
21 people have trouble reading. We will try and continue to  
22 comment as we go.

23 With that as introduction, I will also, as I  
24 did last night, but not everybody was here, voice our  
25 thanks for the wonderful welcome we received yesterday,

1 and for the participation that you all have already given  
2 us, or will in the course of our hearings. In  
3 particular, I want to thank the focus group which Eunice  
4 Diaz helped convene. This includes Dr. Aida Giachello,  
5 Dr. Raul Magana, Mr. John Zamora, Dr. Ileana Herrell, Dr.  
6 America Bracho, Dr. George Rivera, Dr. Nilsa Gutierrez,  
7 Mr. Miguel Gomez, Mr. Jessie Sanchez, and Ms. Miguelina  
8 Maldonado.

9 Of course, Eunice has been extremely helpful,  
10 and I wonder, Eunice, if you'd like to say a few words  
11 before we start.

12 MS. DIAZ: Thank you, Dr. Osborn. It is indeed  
13 a pleasure to find ourselves here this morning in  
14 Chicago. About a month ago, a number of people who Dr.  
15 Osborn just let you know about, met in this city. It was  
16 also snowing that day, and we planned the many aspects of  
17 the hearing today.

18 I'd like to again thank those individuals again  
19 that gave of their time, their energy, but more than  
20 that, I would like to thank the people from around the  
21 country that will not be here today that, first of all,  
22 gave input, voiced their concerns, provided  
23 recommendations -- some of that you will find in your  
24 packets and can be also gotten from the Commission  
25 staff -- of the number of people who have written the

1 Commission, and also continue writing, giving their  
2 suggestions and recommendations for the topics we are  
3 about to discuss today, the Impact of HIV in the Latino  
4 Community.

5 This is the first, and perhaps the only time,  
6 that the Commission will look at this subject in its  
7 entirety. However, we have received no less input from  
8 different people of different forms that the Commission  
9 has had about how this problem is impacting, but we  
10 really are very hopeful that today we will clearly  
11 outline some major priorities for our community, and also  
12 establish that this topic needs to be dealt with as a  
13 subject in and of itself. Although the hearing is a  
14 short one, just this morning, we hope that there will be  
15 audience participation and opportunity for you also to  
16 assist in determining what the recommendations and  
17 suggestions might come forth, not only from this  
18 Commission, but what this Commission needs to hear, in  
19 terms of being able to project this on to the people that  
20 we are responsible to, in terms of framing this problem  
21 for the country.

22 Again, thank you very much for your  
23 participation. We feel that this draws upon the work of  
24 many individuals and communities around the country. And  
25 again, the input is obtained from the individuals who

1 represent a very unified and also a very important voice  
2 in determining what is to be done for our Latinos around  
3 the United States.

4 COMMISSIONER OSBORN: Thank you, Eunice. I am  
5 rather spoiled, because normally in these hearings, Dr.  
6 David Rogers plays the role of the bad cop so I can sit  
7 and smile at everybody when they testify. Unfortunately,  
8 I have to be both good and bad cop today, and will,  
9 therefore, ask you to help me in that.

10 We have a very rich and full agenda for the  
11 morning. And the Commissioners, as you will soon  
12 discover, like to be very active with the people who talk  
13 to us, so to the extent that you can make your initial  
14 presentation even briefer than you were planning,  
15 summarize the key points that you would like us to focus  
16 on. If that can be done, then that just gives us more  
17 opportunity to interact and follow up on issues that  
18 you've raised for our attention. So I hope that will  
19 suit, and if it begins to drag a little bit, I hope you  
20 will forgive me for being a somewhat inexperienced bad  
21 cop.

22 With that, I think we could start with Dr. Aida  
23 Giachello. And you've already figured out that I don't  
24 speak Spanish, so I guess I'll have to ask a blanket  
25 forgiveness there. The Midwest Hispanic AIDS Coalition

1 in Chicago will launch our deliberation. Thanks for  
2 joining us.

3 I. FRAMING THE PROBLEM

4 AIDA GIACHELLO, Ph.D.

5 DR. GIACHELLO: Good morning, and it is,  
6 indeed, a great satisfaction to have the opportunity to  
7 address this very important body on issues that affect  
8 the Hispanic community, which is the problem of HIV and  
9 AIDS. I really want to commend the Commission for having  
10 the vision of conducting national hearings on Hispanics  
11 and AIDS, as well as on other ethnic groups, and for  
12 selecting Chicago, for that matter, for this particular  
13 purpose.

14 What I would do, briefly, is to give a brief  
15 socio-economic and demographic overview of the Latino  
16 population in this country, with some selected health  
17 status indicator and access to medical care as a way of  
18 setting the tone. I will not necessarily elaborate too  
19 much on HIV AIDS as statistic, as I was instructed, as  
20 most of you already have been saturated with so many  
21 presentations on AIDS.

22 With that brief remarks, let me begin with the  
23 first overhead. And originally I was going to prepare  
24 some handouts, because that overhead I usually not use,  
25 but I thought that to begin with it is extremely

1 important to be aware that when you are referring to the  
2 Latino population, you are actually referring to people  
3 that come from more than twenty countries. And here you  
4 see in the map the different countries from which the  
5 Latino population consist of. And obviously, Spain is  
6 not included, but it's another country from which we have  
7 a large Latino population.

8 According to the 1980 census, Latinos are  
9 defined as people who either consider themself Mexicans,  
10 Mexican-Americans, Puerto Ricans, Cuban, people born or  
11 descended in Central or South America or Spain. It is  
12 the first time since 1980 that the census decided to use  
13 a self-identifying file. I happened to be able to count  
14 the Latino population prior to that, or other unreliable  
15 and inconsistent ways of counting the Latino population.  
16 Also, you'll probably hear me and others using different  
17 terms to refer to Latino. Sometimes we use the term  
18 Hispanic. Actually, I usually prefer to use the term  
19 Hispanic. I also prefer the term Latino. I use it  
20 interchangeably. The term Hispanic was permanently  
21 adopted by the federal government in 1976 when they  
22 needed -- they were pressured by the Office of Budget and  
23 Management to come out with standard ways of defining the  
24 different ethnic groups, and they adopted that term.

25 The Latino grassroots who have resented that

1 term, they argue it was not -- it was a term imposed on  
2 them, so that's one of the many arguments that has been  
3 used. The Puerto Rican population are also at times  
4 called New Yorkican, because the largest population of  
5 Puerto Ricans are in New York City. And obviously, you  
6 have all the terms, Boricua, also to refer to the Latino  
7 population.

8 Moving on, the next slides provide information  
9 about the 1990 census, which has recently begun to  
10 release some of the data. Clearly, you see here that  
11 according to the 1990 census, there are about 22.3  
12 million Latinos in this country, and that the percentage  
13 change was about 53% since 1980. If you recall, from  
14 1970 to 1980 the population, the Latino population,  
15 increased about 61%. During 1980, slightly -- that  
16 changed slightly. It was reduced to 53%. And there, you  
17 compare Latino with Whites, African-Americans and Asian,  
18 you see that the Asian-Americans are the faster growing  
19 population group, and obviously, Latino is the second  
20 fastest population group. And clearly, as we're going to  
21 see in the next slide, the Latino population is  
22 duplicating every twenty to twenty-five years. Actually,  
23 1960, we had about seven million, and now in 1990, we  
24 have 22.3 million. So clear, the population is growing  
25 very rapidly for many, many factors.

1  
2  
3

25

One has to do with the high birth rate. Latino population has the highest birth rate of any ethnic group in the United States. It is about twenty-three per thousand, compared for fifteen per one thousand live birth for the non-Hispanic population. And that's one of the key factor responsible for the rapid population growth. The other factor has to do with immigration. When you look at the data provided by the U.S. Immigration Office, you realize that since 1930, most of the legal person that have entered this country has been Hispanic, despite the fact that people think that we are all undocumented worker. But in reality, the immigration has been a key factor in population growth, and demographers are predicting the growth will continue, because one-third of the Latino population are below the age of fifteen, about 50% are below the age of eighteen; therefore, you're starting to see the trend of Latino becoming sexually active, forming family, and for that reason you are expecting a baby boom, or at least demographers are expecting a baby boom.

The next slide was actually estimated on by the Census Bureau last year, before the -- the previous year, before the 1990 census data was released, and they were at that time thinking the Hispanic population was going to be increased only by 39%, when in reality, as I showed

1 previously, it increased to 53% since 1980. So we are  
2 also assuming that the U.S. Census will fall short in  
3 predicting the percent of growth among the different  
4 groups.

5 Here is one of the table that illustrate how  
6 the high birth rate and fertility rate among Hispanics.  
7 And you see the Mexican cohort particularly is the one  
8 that is particularly responsible for the high birth rate.

9 Here, this particular table gives you the sense  
10 of -- of the growth in other states. California, Texas,  
11 New York, Florida, Illinois, New Jersey, Arizona, New  
12 Mexico and Colorado, where you have the largest Latino  
13 population, you again experience, again according to the  
14 1990 census that has been released, a very dramatic  
15 increase when you look at the extreme right, to my right,  
16 the Latino percentage of each state. And you realize how  
17 Latino person is very clear. And therefore, we are  
18 expecting the Latino will be moving on into more  
19 political positions, will be able to impact public  
20 policy, and that will be particularly crucial because the  
21 Latino population is a young population. Most of the  
22 social policy in this country is based on a more middle  
23 aged population, not addressing the needs of the Latino  
24 in terms of us trying to get an education, trying to get  
25 training, trying to form families, housing, et cetera.

1           Here you see the distribution of the Latino  
2 population, again based on the 1990 census data by the  
3 different states. So with twenty-two million Latino, you  
4 realize that 37% live in California, 21% in Texas,  
5 Illinois, which ranked fifth, account for 4% of the total  
6 Latino population in this country, et cetera, et cetera.

7           In terms of composition, Mexican-American is  
8 the largest group within the Latino population, followed  
9 by Puerto Rican, 12%; Cuban, 5%; Central and South  
10 America, which by the way, the Central and South America  
11 cohort are the faster growing group within the Latino  
12 population, and then other Hispanic. So clearly, you  
13 realize that the Mexican-American are primarily the  
14 larger Latino population.

15           Trying to understand some of the migration  
16 patterns, although here this particular map doesn't  
17 really illustrate it to the best, but usually, though,  
18 the Mexican population, Mexican-American are in the  
19 southwestern state, which would cover California, Texas,  
20 Colorado, New Mexico, Arizona. They tend to have the  
21 Cuban primarily in the southeast, in the area of Florida,  
22 and you have the Puerto Ricans primarily in the northeast  
23 area.

24           Now this particular map tries to illustrate  
25 some of the internal migration that began in the 1970's

1 and have continued in the 1980's, which means that the  
2 Puerto Ricans are now concentrated only in New York City.  
3 They are moving into all the northern eastern area  
4 states, and also starting to migrate further to the south  
5 and migrating to the west. Then you have the pattern of  
6 those Latinos who live in the southwest moving further  
7 south, and those Latino in the northern central region  
8 also moving further to the south. And in the case of the  
9 Cuban, Cuban are not only concentrating in Miami, but are  
10 also starting to move to different parts of Florida,  
11 they're moving to Missouri, further to the midwest, they  
12 are also moving to Louisiana, to North and South  
13 Carolina. So right now, you find Latino in every single  
14 state and every single town in this country.

15 And here are just some basic selected social  
16 and economic characteristics. The first one is the  
17 median age. The Latino population is a young population.  
18 As I mentioned before, that has tremendous impact in  
19 terms of population growth. The other aspect related to  
20 the age is the fact that the Latino, in average, is about  
21 23%, 24, the median age, compared to 33.2 for non-  
22 Hispanics. What you find is that this has also  
23 implication in terms of planning of health services.

24 Most of the kinds of services in the main are  
25 in the area of family planning, are in the area of

1 pediatric services, are in the area of OB/GYN, all those  
2 kinds of services that particularly the young adult and  
3 children will be most in need. There you also have a  
4 family size, another indicator. You clearly see how  
5 Hispanic has larger family size. Primarily the Mexican  
6 tend to have larger family size over all.

7 In terms of educational level, one of the key  
8 factor that has tremendous impact in the AIDS epidemic  
9 and health service in general, health status, is low  
10 level of education among Latino overall. Close to 50% of  
11 Latino with 25 years of age and over, have not completed  
12 a high school or a vocational school. And this has  
13 tremendous impact, because the kinds of program,  
14 education programs, accents in services, levels of  
15 education is key. The median income, again you find the  
16 Latino income is considerably closer, one-third lower  
17 than for the non-Hispanic population. And then the  
18 percentage of female head of household, as you see there,  
19 the Puerto Ricans appear to be worse off with the highest  
20 percentage of female head of household, and the  
21 percentage of family living below poverty level is also  
22 higher among Puerto Ricans, and Puerto Ricans who are  
23 female head of household below poverty not shown in this  
24 table is about 66%.

25 Now, when you look at some selected health

1 status indicators, you find that in general, the  
2 literature, the research literature indicate that Latino  
3 experience poor health status. Measure is many different  
4 indicators. The incidence of diabetes is three times  
5 higher, and this is particularly true among Mexican-  
6 Americans. Cancer, you have an excess incidence,  
7 particularly in cancer of the stomach, esophagus,  
8 prostate, pancreas, cervix. Hypertension is a clear  
9 problem. Tuberculosis, which is now arising as a result  
10 of AIDS. Sexually transmitted diseases, teen pregnancy,  
11 alcohol, other drugs, homicide. In this case, 2.5 times  
12 higher. AIDS we're discussing today, and poor lifestyle  
13 practices. Regarding poor lifestyle practices, measured  
14 in this case by obesity, limited physical exercise,  
15 smoking, poor nutrition, cigarettes, the data indicates  
16 the lifestyle practice of a Latino gets worse as they  
17 become assimilated and acculturated into this country.  
18 The more you live here, the longer you live here, and the  
19 more you adopt the mainstream pattern of behavior, your  
20 lifestyle gets poor. And obviously, some of the kinds of  
21 values, like jogging, are not applicable to the Latino  
22 community. If you have Latino jogging, you have a  
23 battery of people think that he stole something and  
24 that's why he's running very fast, to make sure he won't  
25 get caught.

1            Selective health status indicators of Puerto  
2 Ricans. Now, the data, and again, I've been involved in  
3 many research myself comparing Puerto Ricans and  
4 Mexicans. And the data indicated Puerto Ricans have the  
5 worst health status. The profile of a Latino health  
6 status is similar to the African-American profile. If  
7 you look at data, for example, high numbers of restricted  
8 data due to illness within the year, Puerto Ricans happen  
9 to have the highest number among all the ethnic group,  
10 including black and white. They have the highest number  
11 of symptoms of illness reported within the year, they  
12 have high numbers of acute and chronic condition. They  
13 have high incidence of infant mortality, high incidence  
14 of teen pregnancy, high incidence of low birth weight,  
15 high relative risk rate of AIDS cases, high rate of  
16 alcohol and other drugs. So Latino, over all, clearly  
17 find that the incidence of the poor health status is  
18 worse among the Puerto Rican population. That is clearly  
19 due to the poverty issue.

20            I think there was another chart that I was  
21 going to try to explain some of the -- I think maybe it  
22 was this one.

23            CHAIRMAN OSBORN: Dr. Giachello, if you can --

24            DR. GIACHELLO: Sure.

25            CHAIRMAN OSBORN: -- kind of summarize some of

1 these so that we get a chance to proceed --

2 DR. GIACHELLO: Okay.

3 CHAIRMAN OSBORN: -- because this is giving us  
4 a very helpful overview, but I want to make sure we have  
5 time to get into the --

6 DR. GIACHELLO: I appreciate that. And  
7 obviously, one of my frustration in trying to prepare for  
8 this presentation was the fact that in ten minutes it was  
9 very, very limited time --

10 CHAIRMAN OSBORN: We've given you a very hard  
11 task, and we appreciate it.

12 DR. GIACHELLO: -- in which to provide a  
13 profile.

14 But anyway, highlighting the recent situation  
15 clearly, you will find there is a series of factor  
16 related to poverty that is accountable for the high  
17 incidence of the poor health status of this population.

18 Now, this chart, the one prior to that, clearly  
19 indicate, and I could just say that in my own words, the  
20 Latino community, when you look at access measures, the  
21 data done at the national level or the local level,  
22 clearly indicate that they are less likely to have a  
23 regular source of care, or a family doctor or a clinic to  
24 relate to. Whenever they report a family doctor or a  
25 clinic, it tends to be a public health care facility.

1 This is varied by Mexican and Puerto Rican. Mexican use  
2 the public health care facility. Puerto Ricans tend to  
3 use the private physician, and I'm going to explain that  
4 in a second.

5 The other indicator of access is whether or not  
6 they have health insurance coverage. The data clearly  
7 indicate that Mexican-American, in particularly, are less  
8 likely to be covered by any kind of health insurance  
9 plan. Those are related to a source of employment. They  
10 tend to occupy low status occupation that doesn't provide  
11 that kind of benefit.

12 Puerto Ricans, the difference there, they tend  
13 to be more covered by Medicaid and Medicare, because we  
14 said already that 43% of Puerto Ricans are female head of  
15 household. Therefore, they are eligible to Medicaid and  
16 Medicare program. So you see tremendous amounts of  
17 differences there. Other indicate or access has to do  
18 with inconveniences in accessing the system. Some of  
19 those inconveniences are lack of bilingual, bicultural  
20 staff, lack of sensitivity among health care provider,  
21 and I'm talking as fast as a Puerto Rican to be able to  
22 say more. The fact that physically the clinics and  
23 centers are now accessible to that population. You also  
24 find that whenever they access the system, they have to  
25 wait longer, a month be able to get an appointment. In

1 Cook County Hospital they were saying to took between six  
2 and nine months to get an appointment to go to Cook  
3 County Clinic. That is the pattern very clearly here in  
4 the City of Chicago.

5           Once you get to the clinic, to the health care  
6 facility, you have to wait long hours, because sometimes  
7 you don't have the bilingual staff to talk particularly  
8 to those who don't speak English, they have to wait  
9 longer. And I could go on elaborating the many kinds of  
10 access issue, but the data on health services utilization  
11 clearly tell us that Puerto Ricans or Cubans, for that  
12 matter, are higher user of the medical care system.  
13 Mexican use the services the least.

14           Now, one of the many question as a researcher  
15 now, is we don't know whether that discrepancy is due to  
16 the fact that Puerto Ricans have Medicaid or Medicare  
17 coverage, and for that matter they have access into the  
18 system. The Mexican-American do not have coverage, and  
19 therefore, they do not access the medical care system.  
20 That could be one possible explanation.

21           The other explanation could be the Puerto Rican  
22 has the worst health status. So if you are sicker you  
23 tend to use the medical health care system the most. So  
24 those are some of the questions we are trying to research  
25 in literature.

1           Now, obviously, I still have transparencies  
2 that has to do with the AIDS epidemic. But briefly,  
3 instead of going into detail, because time is almost up,  
4 what I basically wanted to share with you, and as we all  
5 know, 60% of all cases of AIDS are happening among  
6 Hispanic. We know that women are affected, all the cases  
7 among women represent 20%, we know that among children it  
8 represents about 26% of all the cases, pediatric cases.  
9 We know the IV drug use is a heavy predictable factor  
10 clearly manifested in AIDS cases among Hispanics, and  
11 also, this is true among different region, like New York  
12 City, Puerto Rico, et cetera.

13           And one of the key conclusions to see for  
14 thought is that when you look at AIDS, you really cannot  
15 analyze this problem in a vacuum. It is related to  
16 sexism, it's related to racism, it's related to poverty,  
17 it's related to classism. It's extremely important that  
18 you, as I have already been able to document, hopefully,  
19 Latino is not only been affected by AIDS, it's been  
20 affected by every single other health problem, including  
21 tuberculosis and many others that the chart provided.  
22 You have to realize that in our community, AIDS is really  
23 one of the many problems that is affecting us, that AIDS  
24 is really making an impact that is tremendous. And that  
25 when you deal with AIDS, you really have to deal with the

1 entire family, because it's the entire system. And when  
2 you see the second decade of the epidemic and look at the  
3 patterns and the trends of HIV, clearly you see that it  
4 is affecting the Latino as a unity community, it's  
5 affecting women, it's affecting children, clearly we have  
6 to deal with Latino in terms of AIDS differently than the  
7 way you deal with other groups.

8 Now, obviously, it's not all Latinos that are  
9 affected. Only certain segment of Latino population who  
10 are affected the most. Latinos who live in barrios, in  
11 segregated area, Latinos who are in extreme poverty,  
12 Latino who somehow don't have options who are part of the  
13 underclass, as many sociology are calling lately. Latino  
14 who somehow, and even when you look at women, you realize  
15 that those who have less level of knowledge and  
16 education, those who are already in oppressed situation,  
17 Latino who lack empowerment in terms of having control  
18 over their lives, we really need to focus and frame the  
19 problem by understanding that it's only certain segment  
20 of total population, Latino population who is affected  
21 the most.

22 And I guess with those comments, I will  
23 conclude. Thank you.

24 CHAIRMAN OSBORN: Thank you so much. And in  
25 particular, I want to thank you for trying to squeeze so

1 much into such a short time. We always feel unfair when  
2 we ask people to do that, and you did it wonderfully.

3 We're going to take advantage of -- I hope you  
4 will have a chance to -- do we have any questions? I  
5 think because of the schedule we may proceed and perhaps  
6 defer questions at the moment.

7 We're going to now have a panel of discussions  
8 on the matter of prevention. Ileana Harrell will be  
9 making the initial presentation, and then she will  
10 facilitate discussions by Hortensia Amaro. America Bracho  
11 and Adolfo Mata. And if they could all come to the table  
12 and --

## 13 II. PREVENTION

### 14 ILEANA HERRELL, Ph.D.

15 MS. HERRELL: If I could have the panel join  
16 me.

17 Buenos Dias. It is indeed a privilege for us  
18 to be here this morning testifying before this  
19 Commission, and I would like to proceed by first  
20 introducing the panel.

21 I am Ileana Herrell. To my immediate right is  
22 Dr. Hortensia Amaro, and to her right Dr. America Bracho,  
23 and to her right Mr. Adolfo Mata.

24 What we will try to do this morning, in the  
25 short period of time that we have been allocated, is to

1 do the impossible, and that is to address the issue of  
2 prevention in the Hispanic community. I say it is  
3 impossible, because we are talking about a community  
4 that, all thoughts to the contrary, is not homogeneous,  
5 but rather heterogeneous, is not monolithic, but rather  
6 consists of multiple groups that really are not  
7 subgroups, but identifiable groups in and of themselves.  
8 And therefore, it's almost an impossible task to do, but  
9 something that we welcome, because we are concerned about  
10 the needs, about the legends, and about the stereotypes  
11 which Hispanics are usually portrayed. And hopefully  
12 after our meeting this morning, you will go away not only  
13 being culturally sensitive, a term that is not a classic,  
14 but rather more culturally competent.

15           What we will be doing is I will be presenting a  
16 short issues paper, and then the other panelists will be  
17 reacting to the issues that will be raised during my  
18 presentation, and with Aldolfa Mata specifically  
19 highlighting programs that are targeted toward Hispanic  
20 communities across the country, with the exclusion, of  
21 course, of Puerto Rico, because as I'm sure that you've  
22 learned, the characteristics of the Puerto Rican  
23 population in the island are much different than the  
24 characteristics of Hispanics in the U.S. mainland and its  
25 other territories.

1           One of the most urgent tasks confronting public  
2 health officials today is the prevention of HIV infection  
3 and AIDS. Public health professionals distinguish  
4 between mass and high risk strategies. Most strategies  
5 are aimed at whole populations. High risk strategies are  
6 targeted to specific groups known to be especially  
7 vulnerable to a health problem.

8           Increasingly, funds for research and program  
9 development are aimed at high risk groups, such as  
10 injecting drug users, women and men engaging in high risk  
11 sexual behaviors, et cetera. Approaches to HIV infection  
12 risk reduction have been primarily information, the  
13 provision of facts about HIV infection and AIDS to a  
14 target population. And education, which are programs  
15 intended to help people make better use of information,  
16 to make better decisions, and to be more assertive in  
17 resisting peer pressure.

18           Such approaches, in contrast to those focusing  
19 primarily on information, typically involve active  
20 participation of target audience, such as discussions or  
21 role playing, rather than the passive receipt of facts.  
22 Intervention programs involve the provision of help to  
23 people during critical periods of their lives. It may  
24 take the form of professional treatment, peer counseling,  
25 special discussion groups or empowerment programs.

1           Persons in the health professions may be more  
2 familiar with the traditional public health model of  
3 primary, secondary and tertiary prevention. Kaplan, in  
4 1964, defined prevention as "comprising reduction in the  
5 incidence of a problem," which would be primary  
6 prevention within a population, in the duration of a  
7 problem within an affected individual, which would be  
8 secondary, and in the impairment resulting from a  
9 problem, which would be tertiary.

10           In 1991, the second decade of the epidemic, we  
11 still have not effectively addressed these program  
12 components in working with Hispanic population groups.  
13 The HIV epidemic is not a monolithic event of caring in  
14 the same way and at the same rate in all populations. It  
15 has been called a collection of epidemics with different  
16 modes of transmission and rates of spreads in different  
17 segments of society within this country.

18           The reality among Hispanics is that we are  
19 infected with HIV faster, converting to AIDS faster, and  
20 dying faster. Our reality of life still remains an  
21 unsolved puzzle to many in public health. All the  
22 surveillance and epidemiologic investigations provide  
23 data on the extent and magnitude of the problem. There  
24 is a great deal of concern among Hispanic population  
25 groups that the data that is being collected is not being

1 used for the best purposes.

2 This data must be used for program planning  
3 activities, it must be used for program implementation,  
4 and it must be used for the evaluation of the  
5 effectiveness of these programs as they relate to the  
6 Hispanic community. We know where the problem is. The  
7 question is what are we going to do about it?

8 In this presentation, I will highlight and  
9 describe some pressing issues and concerns among  
10 Hispanics related to our experience in the prevention of  
11 HIV transmission. Examples will be used to illustrate  
12 the various Latino experiences, because we are not a  
13 monolithic group in which a Cuban is not a Mexican-  
14 American, is not a Puerto Rican, is not a Nicaraguan,  
15 because our heritage is varied, and because we still  
16 have, in spite of our differences, that binding tie which  
17 is language, and that other very, very strong tie, which  
18 is culture.

19 When we talk about ethnicity among Hispanic  
20 groups, we are not talking about the biological factors  
21 related to ethnicity. We self-identify. We choose to  
22 acknowledge ourselves as Hispanic groups. This choice is  
23 not based on race or on skin color, and our community  
24 varies in hues from white to coffee to dark, but we all  
25 have one thing in common. That is our shared common

1 heritage. We are Hispanics.

2 The socio-cultural issues, which are pressing  
3 upon Hispanics in these communities, are the issues of  
4 acculturation and assimilation. People will adopt and  
5 will become adept at working in both environments, both  
6 the Anglo environment and the Hispanic environment. And  
7 then, there are those that choose to assimilate, to try  
8 to become part of the mainstream of the American dream.  
9 And many of those have left our communities. So there is  
10 a possibility of choices.

11 In addition to that, we have a wide variety of  
12 issues as they relate to language. Yes, there is  
13 something called standard Spanish, but no, the  
14 dialectical differences are also an important part of  
15 Spanish, and standard Spanish will not address those  
16 dialectical differences.

17 I would like to bring to your attention, in  
18 talking about public information campaigns, some  
19 literature that came across my desk from a concerned  
20 individual that mailed something to me to review. And I  
21 immediately knew that although the Spanish had been  
22 standardized as much as possible, it was totally  
23 unacceptable to a Puerto Rican community. And there were  
24 at least fifteen uses of terms that were ambiguous enough  
25 that would have either meant something different to a

1 Puerto Rican or would have been found offensive by a  
2 Puerto Rican. An example of this is the issue of  
3 "jeringa". Jeringa is injecting equipment.

4 Well, in Puerto Rico, a jeringa is a bother.  
5 What it really means is don't bother me. Tell your  
6 children "noma jeringas", don't bother me, stay away.  
7 And so anyone reading that document well versed enough in  
8 dialectical differences would have found that statement  
9 incomprehensible.

10 Another example is body fluids. When you  
11 translate that into Spanish, ladies and gentlemen, body  
12 fluids is a spirit that emanates from your body.  
13 "Fluidos", okay? It's something more associated with  
14 spiritual aspects of life than it is with the real  
15 situation that we're trying to address.

16 Individuals may be bilingual, and they may be  
17 bicultural, but there is always that subtle  
18 interpretation in meaning that makes language significant  
19 to an individual's way of life and state of life. Not to  
20 belabor the point, but to share with you some additional  
21 differences in concepts, specifically between the Anglo  
22 population groups and the Hispanic population groups,  
23 when we talk about "educaacion", about education, and Dr.  
24 Lawrence Sly has done extensive work in this area, the  
25 effective meaning of language. What comes to mind

1 immediately to most mainstream individuals is a title, a  
2 university title, the number of years of education an  
3 individual has had. You will be surprised to hear that  
4 to Hispanics, titles are the last thing on an  
5 individual's mind when they talk about that individual,  
6 that individual is well educated. What we mean is that  
7 individual is caring, that individual is responsible,  
8 that individual is well-mannered, that individual knows  
9 how to behave in the best and in the worst of  
10 circumstances. So you see that there is some cognitive  
11 differences, as well as effective differences in the use  
12 of language.

13 Other important concepts that no Hispanic  
14 presentation can go without include the concept of  
15 "dignidad", dignity. The dignity of the woman who may be  
16 poor, but still maintains that sense of self-respect and  
17 self-worth that maybe society doesn't give her. The  
18 sense of "respeto" or respect. We respect our elders.  
19 We respect authority figures. We respect individuals,  
20 and our whole life is permeated with respect. Trust is  
21 another one, and it translates into "confianza". When we  
22 trust, we give of ourselves, and therefore, we are open  
23 to new learning experiences. That's a way in which we  
24 learn. You may use the best methodology, the best  
25 educational materials, and if respect and dignity and

1 trust are lacking, it will not be a learning experience  
2 for the individual.

3           Very quickly, and some of the panel will  
4 address these other issues, we're talking also about  
5 altruism. The willingness, the self-sacrifice of the  
6 Hispanic individual, particularly the woman to clothe and  
7 feed everybody else in her household, and only then think  
8 of herself as an individual who needs to taken care of.  
9 It's making sure that her children are properly fed,  
10 properly clothed, that your family has whatever it needs.  
11 And the concept of family, again, is an extended family  
12 concept. It's not the traditional nuclear family. As  
13 well as reciprocity and cooperation. You're good to me,  
14 I will owe you a favor, and I will go through life  
15 waiting for the day in which I can repay that favor. And  
16 cooperation, we learn best in small group settings as  
17 cooperating individuals. That's one of our learning  
18 styles.

19           Our belief system is also very different. Our  
20 system of attitudes and values is also very different.  
21 For example, when we try to change attitudes, we have to  
22 take into account, those of us in the behavioral  
23 sciences, that there is some personality characteristics,  
24 such as, for example, the loss of self control. We tend  
25 to be more externally controlled than internally. That's

1 why you hear sayings, such as "Hey bandido, no hay  
2 remedio". I mean, you know, that's life, it was bound to  
3 happen. It will happen. Destiny has determined that's  
4 the way life will go. And these are important concepts,  
5 because prevention programs need to take into account  
6 these individual characteristics if they're going to be  
7 effective.

8 Existing social norms, family values and peer  
9 pressures are key determinants of the initiation or  
10 modification of behaviors. From the point of view of  
11 official health agencies, education is the major approach  
12 available to prevent initiation of risky behaviors.  
13 Specific clinical services, such as provision of condoms  
14 are also important in modifying existing behaviors.  
15 That's why attitudes and belief systems are so important  
16 in our attempts to change behavior. And if we don't know  
17 what those attitudes and belief systems are, we may be  
18 changing the wrong behaviors.

19 Education can be addressed at several levels,  
20 societal, group and individual. In the United States,  
21 substantial efforts have been direct to educating the  
22 public. Unfortunately, however, Latinos remain largely  
23 uninformed. Public information and education efforts  
24 have been targeted to the mainstream population groups.  
25 As a result, Hispanics have had to assume the

1 responsibility for providing programs and services with  
2 shrinking, and at times, nonexistent outside support.  
3 Education programs directed toward Hispanics have to  
4 culturally competent, not just culturally sensitive.

5           What do I mean by culturally competent? For  
6 example, in using methodology, we need to be aware that  
7 interventions to change behavior and educational  
8 activities are much more effective when they take place  
9 in the individual's home, because again, the Hispanic is  
10 not an individual entity. It's primarily a family type  
11 of entity, where the family is of great importance to  
12 that individual.

13           We also need to look at interactive educational  
14 approaches where there is an exchange with the teacher.  
15 We also need to look to small group interactions, and  
16 also to teaching by examples. The transmission of  
17 factual knowledge is important, but it is not as  
18 effective if it is not accompanied by the opportunity for  
19 individuals to ask questions or to set examples and then  
20 ask the teacher or the educator to react to those  
21 examples that have been presented.

22           We also need to use the existing formal and  
23 informal networks. For example, an informal network  
24 would consist of the "compadres" approach. Have any of  
25 you heard that term before? The "compadres" approach is

1 children are baptized when they're infants, and there is  
2 a relationship that is as strong as a blood relationship  
3 between the Godparents of that child and the family  
4 members. And the whole concept of compadres is one of  
5 substitute parents. And one of the difficulties in our  
6 communities has resulted because mobility has been that  
7 because families use to live in local neighborhoods where  
8 people use to know one another. The "compadres", the  
9 "comadres", the Godfather and the Godmother, served a  
10 function of also making sure that that child was growing  
11 up, quote "right," because they also serve the parental  
12 functions when the parents were not around. So the  
13 mother and father knew what that child was up to, even  
14 before the child knew that somebody had seen him or her.  
15 So that family function has now been diluted somewhat,  
16 but "compadrazco" are still a very, very strong influence  
17 in the behaviors of the parents that they are related to.

18 We also have to use existent systems of  
19 operation, such as community leaders, and we need to  
20 begin to view the Hispanic woman as a primary care agent  
21 of change. And training women to understand that AIDS is  
22 an issue could be an important first step in working with  
23 these communities. We also need to use a more  
24 personalized approach. We need to become invested as  
25 persons. And, a situation that is often seen in

1 management, where the Hispanic employee will come and  
2 attend a meeting with a supervisor. And the supervisor,  
3 there is a tendency immediately to go to the grain, to go  
4 the matter, and we intend to feel very uncomfortable  
5 because it's a great show of disrespect. It means that  
6 you still have not addressed the welfare or the health of  
7 the family members, you haven't had the opportunity to  
8 inquire how is your family, and that is a show of  
9 disrespect if you don't do that.

10 Also, you need to inquire about the individual,  
11 how that person is feeling on that day. And after you've  
12 taken care of observing "niceties," you can proceed to  
13 talk business and become involved in a situation. And  
14 that is critical when people go to our public health  
15 clinics, or to any service provider. It is unfortunate  
16 to see young physicians, nurses and other public health  
17 workers address individuals they have just met by their  
18 first name. It is perceived as a sign of disrespect.  
19 And that already sets a negative setting for the  
20 interactions that are to follow that client and that  
21 service provider.

22 In addition to that, we also need to use formal  
23 as well as non-formal educational approaches, and I hope  
24 that Dr. Bracho will address some of the specific  
25 techniques that we are using in working with Hispanic

1 women. School-based educational programs are another  
2 societal approach to primary prevention. For Hispanic  
3 children, however, family involvement is critical. The  
4 child is not an island unto itself. The child is part of  
5 a family unit, and that child can be used, also, to  
6 educate the family, but at the same time, the family  
7 needs to sanction educational activities that child is  
8 involved in, because again, there has to be a sense of  
9 ownership.

10 I will make a little aside here, because one of  
11 the disturbing situations that I have seen across the  
12 country has been the use of children as interpreters for  
13 their parents, whether it's in school or whether it's in  
14 a clinic setting. In a clinic setting, it violates the  
15 issues of confidentiality. There are some things that  
16 are private and that no child should be aware of, unless  
17 the parent so desires. And by using children as  
18 interpreters, we are violating that principal.

19 Secondly, we are subverting the parental  
20 authority when we use a child as an interpreter or as a  
21 translator, because the parent becomes the child to whom  
22 things have to be explained and have to be told. And  
23 what we're doing, we're corroding, contributing to the  
24 corrosion of the Hispanic family structure.

25 Perceived social norms within the Latino

1 community are also important determinants of behavior.  
2 It is critical to work with a variety of groups whose  
3 members may be at increased risk of transmission. There  
4 have been initial results of the California study with  
5 heterosexual partners that indicate that the information  
6 that is obtained when individuals are interviewed  
7 separately is much more different from the information  
8 that is obtained when the individuals -- the  
9 heterosexuals partners are interviewed jointly. There  
10 has been a higher percentage of men engaging in sex with  
11 men who have indicated that they have engaged in this  
12 behavior when interviewed independently. And yet the  
13 myth still persists that heterosexual couples are,  
14 indeed, heterosexual. So we need to begin to make sure  
15 that women, in particular, understand that their  
16 behaviors that may not be -- that they may not be aware  
17 of behaviors within that family unit or that partnership.

18 Special issues that merit attention, and I will  
19 do them in bullet form and have the panelists elaborate,  
20 the Latino family. We need to understand, for example,  
21 that when one single individual is affected with HIV or  
22 AIDS in that family, whole family is affected. It's not  
23 just that individual. That we need to use existing  
24 community networks, we have to train people that there  
25 are special women's issues, such as, for example, the

1 intended effects of prevention strategies on our women.  
2 There has been an increase in the number of physically  
3 and verbally abused women who have been abused as a  
4 result of our effective prevention strategies. We have  
5 told them they should only engage in safe sex, and what  
6 we're finding is that when they try to do that, when they  
7 try to follow the public health line, the men are  
8 responding by verbally and physically abusing them. We  
9 are doing these women a disservice by not training them  
10 and giving them the skills they will need to safely  
11 negotiate their own behaviors.

12 We also need to begin to look at integration of  
13 services, follow up, and sexuality. I am often times,  
14 and I shouldn't be surprised by now, but many of you have  
15 heard the statement Hispanics don't like to talk about  
16 sex. That is a myth. It is a myth. We know when to  
17 talk about sex. We know when to discuss about sexual  
18 behaviors. We do it when we feel comfortable with the  
19 people we're discussing it. We do it when we understand  
20 what the issues are, and when we choose what the  
21 approaches are that are going to be used in engaging in a  
22 discussion of this nature.

23 We also need to begin to conduct research as it  
24 relates to bisexuality in Hispanic communities, and also  
25 begin to work against the myth that great injustice has

1 been done to our men by using the concept of "macho" as  
2 negative concept. It's been Anglicized. One looks at  
3 the term macho and what it means in the Hispanic  
4 community. It means a caring man who takes care of the  
5 needs of his family. It's been the media that has  
6 distorted the use of the concept of macho with all of its  
7 negative attributes. And we need to examine that.

8 In closing --

9 CHAIRMAN OSBORN: We need to hear from the  
10 others, and we want to have a chance, too, please.

11 DR. HERRELL: Right. I'm a step ahead. In  
12 sum, I would like to close by saying that some of the  
13 issues that will be discussed here this morning in this  
14 panel will be public health services as related to men,  
15 the disfranchised members of our own ethnic group, the  
16 neglect of male issues, the need to identify and use  
17 community rein forces and motivators for behavior change.  
18 Making sure that we conduct follow up activities and  
19 provide sustained support in order to sustain behavior  
20 change.

21 We need to look at outward strategies for the  
22 workplace, churches, service providers and indigenous  
23 community activities. And consequently, in order to have  
24 significant impact on the HIV epidemic, we must employ  
25 the full range of culturally competent and effective

1 approaches while looking for other tools.

2 And with this I close and want to thank the  
3 Commission, and would very much like to indicate our  
4 willingness to have a, perhaps, three-day seminar in the  
5 future in which we can really roll our sleeves up and  
6 begin to discuss what Hispanics are all about. We would  
7 like to open the floor now for questions.

8 CHAIRMAN OSBORN: Thank you. Let me interrupt  
9 you just a -- I'm going to ask you to facilitate the  
10 discussion as planned, but I'm afraid we need to try and  
11 aim for ten o'clock, which will still be behind the  
12 schedule that we had arranged.

13 DR. HERRELL: Well, we have fifteen minutes.

14 CHAIRMAN OSBORN: We do need to be -- well, I  
15 do want the Commissioners to interact, as well. If you  
16 can be succinct and give us an opportunity, we are very  
17 happy to have all of your --

18 DR. HERRELL: In that case, to establish the  
19 rules for the panel, I think it is important that we not  
20 only hear the comments, but also that Adolfo Mata be  
21 given to opportunity to highlight the activities. So why  
22 don't we begin with some comments from Hortensia, and  
23 move to America.  
24  
25

HORTENSIO AMARO, Ph.D.

1  
2 DR. AMARO: The point of discussion that I  
3 wanted to bring up today are really two, and you have  
4 some information that's been passed out, so I'm not going  
5 to go through the numbers.

6 One is the study that was conducted by the  
7 Northeast Hispanic AIDS Consortium, and I believe you've  
8 all received copies of that now. I'm not going to go  
9 through the numbers, but I really encourage you to read  
10 it, because what that study points out is the continued  
11 astounding lack of knowledge and high levels of  
12 misinformation about HIV infection among Latinos in the  
13 Northeast and Puerto Rico that have severe and critical  
14 implications for how we do our prevention work and the  
15 areas that need to be emphasized. I think it also is  
16 witness to the failure of current efforts in our  
17 community, the fact that they haven't reached our  
18 community, the fact that such a large number of people in  
19 our communities think that there is a cure for AIDS,  
20 think that you can tell who's infected by looking at  
21 them, and they have misconceptions and lack of knowledge  
22 about modes of transmission and have very serious  
23 implications for prevention and work that we need to do.  
24 And some of the other panelists will talk a little bit  
25 about models for prevention that we think are effective

1 and that seem to be showing some effectiveness in our  
2 community.

3 The second issue that I wanted to bring up, and  
4 I'll be brief because you've also received an article  
5 that I wrote on considerations for prevention among  
6 Hispanic women, is the role of women in our community,  
7 especially mothers as AIDS educators and prevention  
8 specialists. It's a resource that we have that's really  
9 untapped and we really, I believe, need to focus on women  
10 -- on developing models of women and mothers as family  
11 educators.

12 Now, our study on the Northeast Hispanic AIDS  
13 project also show that men in our communities are even  
14 less informed than women about HIV, and I think we need  
15 to think seriously about how we're going to get men  
16 informed and develop models that appeal to men, and that  
17 men will respond to, because we can't leave men out of  
18 the picture. But women, as family members, may be, since  
19 they are the traditional health educators, may be the  
20 good approach to that, and I'll close by just telling  
21 you, just relating to you, a very personal story in my  
22 own family.

23 It's two years ago today that my brother,  
24 Armando died. And I never know when it's going to get to  
25 me. And what I want to emphasize about my own experience

1 in my family, is that before myself, as a public health  
2 researcher, talked to my brother about taking care of  
3 himself, before my older brother who's a physician talked  
4 to him about talking care of his health, it was my mother  
5 who would cut out newspaper clippings and send them to  
6 San Francisco to him and talk to him, you know, in her  
7 own indirect and shy way, because she was not used to  
8 talking about these things in such a direct way with her  
9 son. But it was my mother who really pushed him to try  
10 to look at this.

11 And, of course, it was late by then, but even  
12 when he got ill, she went on to work with a group of  
13 mothers of AIDS patients, and I think you probably all  
14 know that group and the wonderful work that they do. She  
15 now visits Hispanic families in the hospitals and other  
16 mothers, fathers, sons, daughters who are infected, and  
17 helps to provide some support.

18 Well, I think there is a potential, incredible  
19 potential for mothers, to also be involved before  
20 infection occurs, and we really need to start looking and  
21 spend some time thinking of what are the models for them.

22 CHAIRMAN OSBORN: Thank you very much, Dr.  
23 Amaro.

24

25

AMERICA BRACHO, M.D., M.P.H.

1  
2 DR. BRACHO: Thanks a lot for this opportunity.  
3 Can you hear there? Can you hear?

4 CHAIRMAN OSBORN: Yes.

5 DR. BRACHO: I want to share several things,  
6 also. I work in Detroit, Michigan with the -- in  
7 southwest Detroit with all the community, but in  
8 particular with Latinos. And what we are seeing around  
9 the nation is a lot of Latinos affected. But this is the  
10 virus, the HIV, is true that can affect everybody, but  
11 AIDS is not an equal opportunity disease, and is not an  
12 equal opportunity disease even among Latinos.

13 We are seeing that these numbers are increasing  
14 more in those so-called pockets of misery. And this is  
15 not by chance, because Aida Giachello was very explicit  
16 in saying what are the conditions of living in those  
17 pockets. What we are seeing, and this really is  
18 frustrating when you work in low income communities, is  
19 all this rhetoric and all this analysis about the  
20 socioeconomic determinants in this epidemic, and the  
21 solution is always "wear a condom".

22 And I think there is a huge discrepancy between  
23 the analysis and the solutions that are being proposed.  
24 I think that when we talk if we are going to spend time  
25 in the analysis, we should at least take that into

1 consideration for the intervention.

2 One of the issues that Ileana talk when she  
3 says the interventions are being short, the interventions  
4 are not being efficient, and then she introduced the  
5 concept of competence. The concept of competence has to  
6 do with the ability of the worker that understand and is  
7 able to handle a culture in a group, to make that group  
8 solve a human problem. And this is not happening. Even  
9 if you have a brochure that talks the right language with  
10 the right dialect, is that intervention going to change?  
11 Is that intervention going to solve the problem in that  
12 particular community? No. Well, it is not a competent  
13 intervention. It might be -- it might be appropriate  
14 from a language point of view, but it is not competent.

15 The concept of competence has to do with being  
16 comprehensive. And in this type of community, this so-  
17 called pocket, we need more than ever to be comprehensive  
18 in our intervention. The education is not getting to our  
19 community, is not getting there. We are being infected  
20 faster, we are progressing to AIDS faster, we are dying  
21 faster. And I read some articles that I forgot to bring  
22 about some areas in New York where Latino women are  
23 living forty-five days after diagnosis. I'm very glad  
24 that white, gay males in San Francisco are living longer,  
25 and I'm very sorry with that situation. They can live

1 five or more years after their diagnosis, but I'm not  
2 happy at all about the fact that Latino women are living  
3 forty-five days after diagnosis, because in the moment  
4 that they discover they have AIDS, is already extremely  
5 late.

6 We have to, then, redefine the education, we  
7 have to do it. When we talk about prevention, we are not  
8 talking about dreams. Prevention is action. And unless  
9 we see action, we are not actually doing prevention. And  
10 then when we define education, we have to make it simple,  
11 direct, competent, and sensitive, appropriate and  
12 personal. And when we talk about cultural values, and we  
13 talk about respect, we are not talking about being  
14 respectful to June Osborn or to Eunice Diaz, we are  
15 talking about a respect that can make you forget your  
16 rights.

17 If I am being disrespected in this hospital,  
18 I'm not using that hospital anymore, period. And we have  
19 to do interventions in which we have to go to the  
20 hospital and make a problem right there so the clients  
21 can continue using that. If they feel disrespected, they  
22 won't use the services.

23 Language is a key component of compliance, and  
24 we know that from the literature. And sometimes you  
25 think -- we think that people that come to this country

1 should speak English, talk English. What happened is the  
2 Mexican-Americans were here before you and I. And the  
3 first language of Mexican-Americans is the Spanish. And  
4 they were here with native Americans. Puerto Ricans are  
5 here because some people are there. So Puerto Ricans  
6 first language also is Spanish. And I think we need to  
7 recognize there is a community there to whom the first  
8 language is Spanish, and we need to be very sensitive and  
9 appropriate in this regard.

10 We need to measure the intervention, know what  
11 behavioral objectives. Oh, yes, you know about AIDS,  
12 because you were able to describe in a very warm manner  
13 that AIDS is Acquired Immune Deficiency Syndrome. No, we  
14 have to stop, and it's true, we have to measure the  
15 behavioral objective, but we need to follow up in our  
16 intervention. We have to be able to allocate money in  
17 some strategy that can let me continue working with this  
18 family. Not only the money toward the change, but to  
19 assist with the behavior modification, and to assist with  
20 that sustained modification in behavior. And this is  
21 true by developing a strategy and story telling.

22 When we go to the families, we then define the  
23 families through the bilingual programs in the  
24 neighborhood. With those lists, we made appointments  
25 with them, we went there, and remember, we don't speak

1 Spanish, we talk culture. I know what culture mean, I  
2 walk culture. I drink coffee with this culture. And I -  
3 - with the coffee, of course, with this type of strategy  
4 of drinking coffee, and the Institute of Social Research  
5 asked us what is the strategy, and we said just knock at  
6 the door and say hello. If the people know you, they  
7 will let you in. That's the whole chart of the strategy.

8 We go there and we tell this story. And people  
9 will repeat the story again. People will try to solve  
10 the problem of the story. This is much known in the  
11 strategy. Ten minutes after finishing the story, people  
12 will be relating to you personal things and will be  
13 telling you about this son that is masturbating too much  
14 and may be doing crack. And at that moment, that person  
15 will say I cannot deal with this. My husband is in  
16 alcohol. He is not supporting me. What can we do? And  
17 we can plan with house 2143 what is strategy that it will  
18 be different from 2150. And we have to individualize the  
19 strategy or we don't talk anymore about personalism. If  
20 personalism is important, it's important to do it, and  
21 it's important to have money. We got cut, the budget for  
22 that program. We had to lay off our family worker.

23 The other thing that we seek in a desperate way  
24 is to define the cofactors. The cofactors that are  
25 always factors that can make a person progress from HIV

1 to AIDS. Then they talk about the stress and nutrition  
2 and the trauma and injuries, et cetera, et cetera. And  
3 all those cofactors are present in our community. Early  
4 intervention is nothing but a dream in our community. So  
5 we really think that we should research and address the  
6 issue of progression of infection faster and progression  
7 faster.

8 We also develop activities in the women  
9 population, in the female population. And I had a group  
10 of women discussing about condom use. And one woman told  
11 me that she had a friend that used condoms, and the  
12 condom got stuck in her vagina. And then a second time  
13 he got it stuck in her vagina. So she was afraid about  
14 condoms, because of many condoms get stuck in one's  
15 vagina, we have to go for surgery. And I had to take a  
16 deep breath and explain this woman that she has to start  
17 using her fingers and putting her fingers into her  
18 vagina, to actually get to know their body. But that  
19 situation told me we have to go a lot before. I mean, we  
20 have to move back to basic principles of anatomy, self-  
21 esteem, family power, participation, support and follow  
22 up before even dreaming of condom use.

ADOLFO MATA

1  
2 MR. MATA: What an act to follow. I should just sit  
3 here and take the applause since the lady did such a  
4 wonderful job.

5 We are pressed for time, and I do want you to  
6 hear about some of the successful strategies and  
7 approaches that are being conducted in the Latino  
8 community throughout this country. It's interesting to  
9 know that I talked to several different programs  
10 throughout the country and there is no one program that  
11 is doing the same thing. Everyone is doing a different  
12 approach to serve the needs of their community. And I  
13 think what clearly came out of this was programs need to  
14 be developed at the community level with people from that  
15 community, with people that know that community, people  
16 that know the characteristics of the community.

17 I think we clearly know that what has worked in  
18 the Anglo and non-Latino community does not necessarily  
19 work in the Latino community. I think we know -- last  
20 night we were talking about the issues of hotlines or  
21 "linear calientes", and what -- very impersonal. I mean,  
22 I think calientes approach needs to be a tailored,  
23 personal approach with a lot of contact, a lot of one-  
24 to-one where you get to know the individual, where you  
25 get to know who the person is, who the family is, where

1 do you come from. It's very labor intensive.

2 Furthermore, it cannot be done piecemeal. It  
3 needs to be a comprehensive approach. And I think we've  
4 learned with that in STD's. I think right now in this  
5 country there's a terrible problem with syphilis,  
6 gonorrhea, however, for all this time STD has been dealt  
7 with in a vacuum. But the problem has not gone away. I  
8 think even now we have outreach workers out on the  
9 streets who are doing HIV education and prevention, but  
10 they're not even talking about syphilis, gonorrhea,  
11 herpes. All those things are not being mentioned. Why?  
12 Well, you know, there's only so much an individual can  
13 do.

14 If an organization is not provided with the  
15 funding to be able to hire the individuals, to train the  
16 individuals about STD's, to be able to go out into the  
17 community and make referrals to STD clinics, it cannot be  
18 dealt on a piecemeal approach. It has to be a  
19 comprehensive approach.

20 It also needs to be a core group approach. We  
21 need to work with people who are HIV positive, we need to  
22 be able to work with their families, we need to work with  
23 their partners, we need to make it a community affair.  
24 We need to work with people who are HIV positive not only  
25 for their own protection in terms of reinfection, but

1 also in terms of transmitting the virus, and then at the  
2 same time, to use them as peer educators, as individuals  
3 in our community.

4 I think a lot of times we in the Latino  
5 community have not grasped strongly to the issue of HIV  
6 because we have not seen people with AIDS. So people  
7 say, you know, I can tell what somebody with HIV looks  
8 like. It's not true. But I want to move on and give you  
9 the report on the programs. The only other two things  
10 that I wanted to mention was the surveillance, and the  
11 importance of surveillance and epidemiology to help us  
12 focus and develop prevention programs and activities  
13 directed to a specific group.

14 Let me give you an outline here of what I was  
15 very impressed with what was happening throughout the  
16 country, in terms of our response to the epidemic, and  
17 this I will try to make it as short as possible. And  
18 I'll try to speak as fast as a Puerto Rican can.

19 The Hispanic/Latino Community's Response to the  
20 Challenge of the HIV/AIDS Epidemic in Their Backyards.  
21 "No mueras por ignoracial" (Do not die because of  
22 ignorance), "La Familia Hispana Contra el SIDA" (the  
23 Hispanic Family Against AIDS), "Informe SIDA", (AIDS  
24 Bulletin), HACER (The Hispanic AIDS Committee for  
25 Education and Resources). By the way, HACER means to do.

1 Proyecto "Vecino a Vecino" (Neighbor to Neighbor  
2 Project), "Ilumintate. Como vas a menejar? Vivo o  
3 Muerto" (Know yourself, how will you manage" Dead or  
4 Alive?), Las Almas de Dios (the Souls of God), "Noche de  
5 Ronda" (Night of Sernades), La Clinica Esperanza (the  
6 Clinic of Hope), CURAS (Comunidad Unida en Respuesta al  
7 SIDA) (Community United in Response to AIDS/SIDA). What  
8 do all these phrases have in common?

9 They and many more are the collective response  
10 of the Latino/Hispanic community's fight against AIDS in  
11 this country. From Miami to New York City and north,  
12 from Cleveland, Ohio to Salt Lake City, Utah and south to  
13 Texas and on to California and Washington State, the  
14 Latino/Hispanic communities of this country have  
15 responded to the challenge of the HIV/AIDS epidemic in  
16 their backyards.

17 Hispanics, young, old, heterosexual, homosexual,  
18 bisexual, not necessarily self-identified, by the way,  
19 these are just terms, sex industry workers, injection  
20 drug users, migrant farmworkers "campesinos", recent  
21 immigrants, monolingual spanish speakers, mothers,  
22 fathers, sons and daughters are being reached in the  
23 streets, by television and radio, at fiestas, in their  
24 homes, in Latino gay bars, straight bars, in jails and in  
25 churches with HIV/AIDS prevention messages. Messages

1 that have taken their language and cultural values into  
2 consideration.

3 Messages that have been approved by their  
4 communities. You see, many Hispanic individuals have  
5 questions about AIDS and a deep sincere desire for  
6 factual answers. We all have heard that  
7 Hispanics/Latinos do not talk about sex, drugs and  
8 sexuality. Let me tell you. They do. When their  
9 values, beliefs and trust are respected. The secret is  
10 in knowing the community and targeting your messages and  
11 strategies appropriately.

12 And I'm going to just briefly give you some  
13 programs throughout the country.

14 CHAIRMAN OSBORN: Let me see if you can be  
15 brief, because we will be happy to read that kind of a  
16 detail.

17 MR. MATA: Okay.

18 CHAIRMAN OSBORN: And we are already now past  
19 ten, and have not had a chance quite yet. So I really  
20 want to the Commissioners to have a chance to respond to  
21 some of your -- all of your interesting input.

22 MR. MATA: Okay. ALLGO in Austin, Texas.  
23 Neighborhood Walks, walking throughout the neighborhood  
24 home to home talking to individuals in their home. The  
25 Hispanic Committee for Education in San Antonio, Texas.

1 Going from door-to-door talking to couples in their homes  
2 to be able to talk about HIV prevention. And I think  
3 what you'll see here is creating the environment where  
4 the individuals want to go in their homes.

5 Liga Contra Sida in Miami has done a lot of  
6 recognized of messages, radio, TV, very important for the  
7 Hispanic/Hatian community.

8 Programa De Educacion Sobre El SIDA/AIDS in  
9 Santa Barbara, California. Working with compesinos,  
10 actually going out to the farms, and it's taking away  
11 from the workers schedule, but during their lunch time  
12 holding sessions so compesinos can learn about HIV and  
13 AIDS and have questions answered. The Dallas Health  
14 Department working the prostitutes in topless bars and  
15 what they call modeling studios, empowering women with  
16 information about HIV.

17 The National Latino Gay and Lesbian  
18 Organization involved in California in creating a  
19 campaign specifically to address Latino gay men and HIV  
20 testing and early intervention services. Utah, the La  
21 Familia Contra el SIDA. Colorado AIDS Training Network  
22 is a very interesting collaboration between the Church,  
23 the gay and lesbian organization, and also their own  
24 support group for people with AIDS, Las Almas de Dios.

25 And again, throughout the country, these are

1 strategies that have been created to meet the needs of  
2 that community at that -- taking their needs into  
3 consideration, and not taking a national approach to HIV  
4 prevention because obviously, that does not work. It  
5 needs to be tailored to each individual community.

6 Thank you.

7 CHARIMAN OSBORN: Thank you very much for  
8 trying to help us with our schedule problem. I apologize  
9 for pressing you so.

10 I think we have -- we want to take a couple of  
11 minutes. We're very late, but I want to make sure the  
12 Commissioners have a chance to follow up on some of the  
13 important points you've made. And so let me take a few  
14 questions before we break.

15 COMMISSIONER ALLEN: Dr. Herrell, I had a  
16 question about when you were talking about what would be  
17 offensive to someone. You mentioned some that were  
18 inappropriate that did not communicate well. What  
19 would -- would you describe one that would be a offensive  
20 to an individual out of that example?

21 You said there were 15 cases where it was not  
22 communicated. I wasn't sure what would be offensive.  
23 And that's something that I struggle with is how do we  
24 define defensive for a community and not offensive? And  
25 who decides that?

1           And so I'm just curious on your perception of  
2 an example of that.

3           DR. HERRELL: In -- in terms of an interaction  
4 between two individuals, let's say that of a service  
5 provider --

6           COMMISSIONER ALLEN: Well, I'm thinking  
7 specifically of the literature you -- you spoke --

8           DR. HERRELL: Oh, the pamphlet?

9           COMMISSIONER ALLEN: Yeah. You spoke of.

10          DR. HERRELL: For example, taking the approach  
11 that some terms are acceptable when they are in -- for  
12 example, the verb coher -- to take. To coher, you never  
13 use that word in South America because it means that what  
14 you're doing is you're grabbing a sexual organ.

15          So you use the word tomad, which is another way  
16 of saying the same thing.

17          Another term which may not be so much offensive  
18 as misleading would be, for example, use of the word --  
19 I'm trying to think of what the appropriate word -- well,  
20 another example would be jeringa. One understands when  
21 one uses the concept of jeringa that you're talking about  
22 a syringe. Right?

23          But unless you say needle, the individual would  
24 be confused in its thinking and will think that the  
25 danger is only posed when you use a syringe, but you can

1 share your needle.

2 COMMISSIONER ALLEN: Okay. Yeah. That's --

3 DR. HERRELL: Okay.

4 COMMISSIONER ALLEN: That's more  
5 miscommunication. The first example, the follow up  
6 question to that is would that verb be appropriate in  
7 another --

8 DR. HERRELL: Yes. It would. For example, it  
9 is acceptable among Puerto Ricans.

10 COMMISSIONER ALLEN: Okay. Another question -  
11 - just one more quick question to you, as well. You  
12 mentioned that the data is not being used appropriately?

13 DR. HERRELL: Right.

14 COMMISSIONER ALLEN: Could you describe how the  
15 data is being used now? You did describe how it should  
16 be used.

17 DR. HERRELL: It's mainly to report cases.  
18 What I hear our community people saying is we know we  
19 have a problem, we know where the problem is. Why isn't  
20 that information being used for program planning  
21 purposes, for example?

22 COMMISSIONER ALLEN: So you're saying that it  
23 is not?

24 DR. HERRELL: Right. Why isn't that  
25 information being used for funding purposes? Why do we

1 still persist in funding some activities when we know,  
2 for example, that the progression of the disease now is  
3 even within Hispanics -- among some of the Hispanic sub-  
4 groups?

5           There is also a concern that the information  
6 may be misused. It may be misused to categorize  
7 individuals. That we tend to use ethnicity without  
8 including social economic status when we talk about  
9 diseasing people. And that it serves to stigmatize broad  
10 ethnic and racial groups.

11           COMMISSIONER ALLEN: If anybody else wants to  
12 comment.

13           DR. BRACHO: Yeah. I would like to comment.

14           COMMISSIONER ALLEN: I had a feeling you would.

15           DR. BRACHO: Because let me give you a very  
16 short example. When we say Latino women are being very  
17 affected in this epidemic because they use drugs or they  
18 are partners of drug users in the majority. You  
19 understand what you are saying and I understand.

20           But my community think that they are not at  
21 risk unless they use drugs. Or that this particular  
22 group of women does not deserve compassion because we are  
23 just providing numbers. As if numbers don't have any  
24 type of meaning. And numbers have repercussions.

25           And what is happening is that we are not

1 eliciting compassion and solidarity and why can we not  
2 elicit this? If we are not making them actually prevent.  
3 Instead, you could do this. You can say there are a lot  
4 of women affected in this epidemic. You provide the real  
5 number instead of saying this 16%. They may not  
6 understand a statistic either.

7 And -- and instead of doing that, you provide a  
8 number and you say there are a lot that are being  
9 infected for this and this and this reason. And here we  
10 are, the ones that are not infected ready to help them  
11 and prevent AIDS in this community.

12 And you give a non-deficit approach to that  
13 message. You use the numbers in a way so that you  
14 stereotype and you elicit that solidarity and compassion.

15 CHAIRMAN OSBORN: In the short time that we  
16 have, I'm going to have to sort of cut things off. But,  
17 Don Goldman and then I'd like Eunice to make a comment.

18 COMMISSIONER GOLDMAN: Thank you. When I went  
19 to college, I was struck by the numerous different names  
20 that were given to sexual organs and sexual activities  
21 within the United States. But, yet it really didn't  
22 cause a whole lot of communication problems.

23 I mean, when somebody said something, I said,  
24 oh, you must be from the south. Or, oh, you must be from  
25 the midwest. And at least there was some understanding

1 as to I'm from the northeast, so that's where things  
2 are -- that's where -- from my perspective, that's our -  
3 - we use the right words, of course, and vice versa.

4           Isn't that same understanding and sensitivity  
5 existent within the Hispanic community? And I'm  
6 wondering whether or not the problems in terms of  
7 language that you're referring to are, in fact -- are, in  
8 fact, the problems that you say they are or whether or  
9 not that understanding doesn't exist.

10           That the understanding -- that Puerto Ricans  
11 don't understand that Mexicans use different language; is  
12 that -- is that true or what? I'm just --

13           DR. BRACHO: It does, but it can bother to read  
14 a word that you consider not appropriate. There is a  
15 problem. I react. The reason I don't use bad words in  
16 English is because it doesn't mean anything for me.  
17 Listen to me in Spanish and it will mean something for  
18 you.

19           I mean, it doesn't anything. But there are  
20 words that reactivate me a lot. And then I don't use  
21 those words. Let me use an example that is not even  
22 considered a bad word. Casual sex -- casual sex or  
23 casual relations. If you say you don't get AIDS by  
24 casual contact, but don't engage in casual sex; what is  
25 that?

1 I mean, either it's casual or it's not casual.  
2 It's very complicated. And remember that you are talking  
3 in -- into this pocket. The level of education is very  
4 low. And you have to be as simple as possible. Make it  
5 simple.

6 DR. HERRELL: And also, there are numerous  
7 nuances in language. For example, positivity. To be  
8 positive is a good thing in Spanish. And when people  
9 have a TB -- tuberculin skin test and you say, oh, gee,  
10 you were positive. They say, wonderful! I don't have  
11 anything to worry about. I'm positive.

12 And as much as you try to explain that there  
13 are differences to some of these individuals, it never  
14 truly registers. So we have that problem also with sero  
15 positive. It's a good thing. It's something you should  
16 have.

17 MR. MATA: That clear -- you know, states the  
18 point of generic programs. You cannot take a generic  
19 program and make it applicable to the Latino community  
20 across the country.

21 The American response to AIDS campaign, which  
22 is a very generic type of program and you expected it to  
23 work in Puerto Rico, in Texas, in New York City and -- it  
24 doesn't work. What works is community -- at the  
25 community level, people that know the nuances of that

1 community, indigenous workers.

2 DR. AMARO: I think that the problem that comes  
3 up is related to the demographic characteristics of the  
4 populations that we're talking about. And Dr. Giachello  
5 talked about lower -- the low levels of education.

6 So you're dealing with that kind of base to  
7 start with. You're dealing with very low levels of  
8 knowledge about reproduction, anatomy and so forth. And  
9 so you are already barraging the person with all types of  
10 information. And then when you use on top of that  
11 language that is unfamiliar to them, you're then asking  
12 them to make another -- you know, to cross another  
13 bridge, to extend that gap themselves.

14 When what we should be doing is trying to limit  
15 any barriers and make it as familiar as possible so that  
16 then they can really understand and digest and begin to  
17 accept the information. That's very difficult to  
18 understand -- you know, as it is. So we don't want to be  
19 providing information that asks people to extend  
20 themselves further and -- you know, close gaps between  
21 them and a piece of paper.

22 And that's what these differences in language  
23 do sometimes.

24 COMMISSIONER GOLDMAN: So then what you're  
25 saying is the -- that the differences in language are

1 perhaps more -- more understandable and it is less  
2 critical the higher the educational status of the  
3 individual.

4 DR. AMARO: Well, also, intervention is  
5 personal --

6 DR. BRACHO: Like you were saying that you are  
7 from the northeast. If you are there, and you say -- and  
8 you use a word that is not appropriate and people react  
9 to you and say, what is that? Okay. And then you say,  
10 well, what do you understand for that? I don't mean  
11 this.

12 And that's why to be there is more important  
13 than that pamphlet because actually you can help people  
14 understand. So we will understand, but we have to talk  
15 about what we are --

16 DR. AMARO: The point also is that -- I mean,  
17 there's no need for us to put ourselves in a situation  
18 where we're using educational materials that are not  
19 targeted to the audience that we're serving because we  
20 can -- those materials can be adapted.

21 So I don't see it really as an issue that --  
22 you know, it presents such barriers that we have to think  
23 through whether these materials are acceptable or not.  
24 They are not the best materials. They have to be adapted  
25 locally.

1           And, I mean, we're already dealing with  
2 information that's very difficult. Why make it more  
3 difficult for people?

4           CHAIRMAN OSBORN: Eunice has kindly yielded me  
5 her time because we really do have to move on. Let me  
6 express the gratitude of the Commission for your very  
7 important input.

8           And we are going to take about a 20 minute  
9 break and then we will be -- 15 minute break, I guess  
10 we'd better do. And then we will be back.

11                           (Recess.)

12           CHAIRMAN OSBORN: The next segment of time over  
13 to Dr. Nilsa Gutierrez from the New York AIDS Institute.  
14 And I'll let you sort of introduce people, as well as  
15 proceed in the manner that you've discussed with our  
16 staff.

17           Thank you so much for taking the time to be  
18 with us.

1 DR. NILSA GUTIERREZ, DR. EMILIO CARRILLO

2 MANUEL FIMBRE and PAULA AMARO

3 DR. GUTIERREZ: Sure. Why don't we start with  
4 Emilio Carrillo. We will introduce ourselves, what we  
5 have done in terms of AIDS work and where we are now.

6 DR. CARRILLO: My name is Emilio Carrillo. I  
7 am originally Cuban, brought up and raised in New York  
8 City. Physician and public health -- epidemiologist and  
9 MPA's, trained at Harvard where I worked for many years  
10 in the faculties of the two schools.

11 Am engaged in community based prevention,  
12 research in the fields of prenatal care, low birth weight  
13 and smoking prevention. And have been an activist in  
14 the community in the area of AIDS for many years.

15 Currently, for the past year, I've been the  
16 President of the New York City Health and Hospitals  
17 Corporation and am very pleased to be here with you  
18 today.

19 MR. FIMBRE: My name is Manuel Fimbre. I am on  
20 the faculty of the School of Social Work at San Jose  
21 State University. I've been a social worker for about 25  
22 years. I'm a native of Arizona. I now reside in the bay  
23 area -- San Francisco Bay area.

24 And have been quite involved in the field of  
25 social work trying -- especially within the National

1 Association of Social Workers, trying to get them to  
2 respond to the whole threat of AIDS.

3 MS. AMARO: My name is Paula Amaro. I'm an  
4 AIDS patient and I've been half my life here in Chicago.

5 CHAIRMAN OSBORN: Where was the other half?  
6 Before that, where did you live?

7 MS. AMARO: Miami.

8 CHAIRMAN OSBORN: In Miami.

9 DR. GUTIERREZ: Okay. I have been the  
10 Associate Medical Director of the AIDS Institute for the  
11 past -- almost one year. Prior to that, I spent ten  
12 years in the Harlem community as a primary care internist  
13 in a community based clinic -- a primary clinic care  
14 setting.

15 We'd like to start with a formal statement of  
16 protest with regard to time. I spent a moment with --  
17 with June, who expressed her own concerns about how we  
18 are all pressed for time, but we do need to say that four  
19 hours is an extremely short period of time when we're  
20 talking about an issue as complex and as socially  
21 stigmatizing as HIV AIDS.

22 And especially when we put that into the  
23 context of such an economically, culturally and  
24 ideologically diverse group of people. But we should, at  
25 this point, move on. That just needed to be said.

1           The framework of the discussion for this  
2 morning will be first establishing that our -- that we  
3 embrace the approach of the continuum of care model.  
4 That we as health care providers, and certainly within  
5 the health care system as -- as planners and as  
6 providers, we know that it is that kind of model that  
7 really embraces all of our service needs from beginning  
8 to end.

9           And by that, I mean we start with education and  
10 prevention work. We then move on to early  
11 identification, early intervention, periodic monitoring,  
12 medical monitoring, prophylaxis and treatment,  
13 integration into clinic trials, psycho/social support and  
14 then all of the other supportive services that come after  
15 and in between someone is hospitalized.

16           So that is to say that what we will do now is  
17 to kind of format the questions into three areas. One  
18 that is directly related to health care service needs,  
19 and in particular, access issues. The second area is  
20 income maintenance issues and the third is supportive  
21 services.

22           That's our format.

23           I think it's important to say first of all that  
24 in the last couple of months, all of us have been reading  
25 in public health journals new information regarding

1 access to care issues. If we've been reading this  
2 literature for the past 25 years, we all know that the  
3 information is not new. That essentially it is saying  
4 the same thing that prompted the initiation of the -- of  
5 the community health center model back in the mid-60's.

6 And, essentially, the crux of the matter is  
7 privatized medical care in this country. And since we  
8 cannot transform the medical system, at this point, we  
9 can try to modify it whatever we can, creatively anyway.  
10 We must try.

11 We are 22,000,000 Hispanics, of which the  
12 overwhelming majority are Mexican Americans, followed by  
13 Puerto Ricans, who make up 13% of the total. Together,  
14 we make -- we make up 75% of all Hispanics in this  
15 country. And the majority of us live in four or five  
16 states most affected with HIV AIDS. That is New York  
17 State, California, New Jersey, Florida and Illinois.

18 We almost -- about 70% of this huge population  
19 lives in urban areas. So that with regard to access, we  
20 are present -- we are at least physically close to health  
21 centers and hospitals. So then, why is it that we don't  
22 get there or we get there a little too late?

23 Again, it basically falls on the issue of  
24 either no insurance, lack of sufficient insurance to  
25 provide full coverage or there -- or many of us who

1 receive Medicaid, but who cannot get the types of  
2 services and the quality of services we actually need.

3 I'd like to ask Manuel Fimbres a question. That  
4 is, that for Mexican Americans, about 37% are uninsured.  
5 With regard to recognizing that privatized medicine is at  
6 the root of the problem, what is your sense of what the  
7 access issues are in the southwest and in the west coast?

8 MR. FIMBRE: I think they get better services  
9 in the State of California. California, like New York,  
10 is a very generous state. But I'm not so sure about  
11 Arizona. In fact, even though that is my native state,  
12 I'm not so sure they're a part of the union.

13 And God help the poor native Americans. I  
14 think they're just allowing them to die. Of course,  
15 probably the new governor would probably take issue with  
16 that.

17 But with regards to Hispanic -- especially the  
18 undocumented Hispanics in California, they come knocking  
19 on the doors of what are the remnants of the old county  
20 hospitals and the State of California does pick up the  
21 tab.

22 DR. GUTIERREZ: Dr. --

23 MR. FIMBRE: Briefly, we also have a large  
24 number of Mexicans who have gone through the amnesty  
25 process and they -- because they wanted to become

1 citizens, did not want to put themselves in jeopardy of  
2 being a public charge. They have gone into contractual  
3 relationships. They've actually established credit with  
4 Catholic hospitals.

5 They -- several of the Catholic hospitals have  
6 developed what they call a center for life where they can  
7 -- the mother can go get the prenatal care, have the  
8 child there. And if they are poor, once the child is  
9 born, the child is an American citizen. The child's tab  
10 can be paid by the state. Their private -- their own  
11 tab, they pay it on a month to month basis little by  
12 little over a long period of time.

13 And so we have also the private care -- the  
14 private sector develop -- offering some service to  
15 Hispanics. But I would say they are -- they're a small  
16 percentage and could be seen perhaps as an exception  
17 rather than the rule.

18 DR. GUTIERREZ: Manuel, just to add to this --  
19 add to the question, there are about 1,000,000 farm  
20 workers who live in settlements. Can you comment on  
21 their access issues?

22 MR. FIMBRE: I think that Barbara Garcia will  
23 talk about the farm workers.

24 DR. GUTIERREZ: Okay.

25 MR. FIMBRE: We have some serious problems with

1 the farm workers. We discovered, for example, and this  
2 relates to services, that a number of them have their  
3 social security deducted from their salary, but it has  
4 never been turned over to the social security.

5 It's either the contractor or the farmer who  
6 pockets that money. And so when they apply for  
7 disability -- lo and behold, they haven't paid enough  
8 into their account.

9 And we would like for this type of practice to  
10 be stopped. And we would like for Social Security to  
11 truly have an investigating team to put an end to this  
12 type of abuse and exploitation.

13 DR. GUTIERREZ: Dr. Carrillo, a question for -  
14 - for you. New York City -- first, you are the president  
15 of a municipal hospital system of the largest municipal  
16 hospital system in the country. You're also -- it's  
17 located at the epi-center of the country where to date it  
18 is the leading killer for women between the ages of 25  
19 and 34, and for men between the ages of 25 and 49.

20 It is a public health system where about one  
21 third of the patients who have AIDS find themselves. And  
22 generally, they enter the hospital system through the  
23 emergency room. To date, there are over 1,350 Latino  
24 women identified in New York City and over 6,500 men.

25 Can you comment on what the obstacles are

1 regarding this continuum of care model and what it means  
2 for a municipal hospital system as large as that to do  
3 that kind of work? To actually implement it?

4 DR. CARRILLO: Yes. I'll be happy to answer  
5 that. If there's more information or materials for more  
6 specific that the members of the panel would like, I  
7 would be very happy to send information afterwards. I  
8 came prepared to ask questions and didn't come with --  
9 with prepared remarks.

10 Let me say that the -- indeed, the health and  
11 hospital corporation is the largest municipal system for  
12 health care delivery in the country. We have 11 large  
13 acute care hospitals, five large long term care  
14 facilities, all located in the City of New York.

15 We are a -- we are a little universal health -  
16 - universal health care system. Our doors are open to  
17 everyone. We -- we turn no one away. If you have  
18 Medicaid, if you are insured, we basically provide care  
19 for everyone, with the goal of providing quality care for  
20 all.

21 The problem of AIDS in New York is one that  
22 needs to be dealt with in a community based primary care  
23 model. It's one that needs to be dealt in the  
24 preventive community based primary care model. The  
25 treatment -- the education on AIDS cannot be based in

1 hospitals.

2 Our system is a system that was built in the  
3 first half of the century and in the 50's and some in the  
4 60's, based on the traditional large hospital where all  
5 the facilities, all the specialists and all the resources  
6 are centered.

7 The needs of our communities is such that the  
8 emphasis in the large hospital has to change to a care  
9 that is more accessible, that is more culturally and  
10 linguistically appropriate and more accessible in a  
11 friendly way so that the people will feel comfortable  
12 using the health care system.

13 Right now, what we have in our communities in  
14 New York City, not just for Latino communities, but other  
15 communities of color and to poor communities, is a  
16 reliance on emergency rooms for care. AIDS is not a  
17 disease that is treated in the in-patient services or the  
18 emergency rooms.

19 AIDS is a disease with features of a chronic  
20 disease that need to be treated in the primary care  
21 setting. Our goal -- our mission -- is to turn around a  
22 huge hospital corporation with a budget of close to \$3  
23 billion a year -- to turn it from the traditional very  
24 acute care hospital orientation to a more of a primary  
25 care community based orientation. To be able to meet the

1           Can you comment on what the obstacles are  
2 regarding this continuum of care model and what it means  
3 for a municipal hospital system as large as that to do  
4 that kind of work? To actually implement it?

5           DR. CARRILLO: Yes. I'll be happy to answer  
6 that. If there's more information or materials for more  
7 specific that the members of the panel would like, I  
8 would be very happy to send information afterwards. I  
9 came prepared to ask questions and didn't come with --  
10 with prepared remarks.

11           Let me say that the -- indeed, the health and  
12 hospital corporation is the largest municipal system for  
13 health care delivery in the country. We have 11 large  
14 acute care hospitals, five large long term care  
15 facilities, all located in the City of New York.

16           We are a -- we are a little universal health -  
17 - universal health care system. Our doors are open to  
18 everyone. We -- we turn no one away. If you have  
19 Medicaid, if you are insured, we basically provide care  
20 for everyone, with the goal of providing quality care for  
21 all. ✓

22           The problem of AIDS in New York is one that  
23 needs to be dealt with in a community based primary care  
24 model. It's one that needs to be dealt in the  
25 preventive community based primary care model. The

1 Latinos. These people are -- are -- these Latinos like  
2 myself are just not open -- the doors are not open to us  
3 in these medical schools.

4 So we have a serious problem with personnel.  
5 We need to turn to other levels of care. We need to turn  
6 to nurse practitioners. We need to turn to physician  
7 assistants. But in doing that, we need to confront a  
8 whole bureaucracy of state licensing procedures, a whole  
9 bureaucracy of basically turf, in a very much turf  
10 oriented warfare between the interests of the medical  
11 world and the interests of other -- other groups.

12 So we have a serious obstacle to confront in  
13 terms of personnel as we wage the battle with AIDS. It's  
14 something that affects all communities, but particularly  
15 affects our communities where we have -- we do not have  
16 the doctors to begin with.

17 Facilities -- our municipal health care systems  
18 are facing tremendous cuts. We basically face \$200  
19 million cuts from the City of New York. We're expecting  
20 some \$60 million in cuts for fiscal '92 for the state,  
21 and with the Medicare cuts, we estimate that we'll be  
22 losing another \$30 million. So we're basically -- we're  
23 losing huge amounts of money.

24 The money that we will need to basically  
25 bolster the defense is the money that we would need to

1 basically create new programs. To go out there and begin  
2 to do prevention, to begin to do outreach. That money is  
3 -- is being sliced away fiercely.

4 So, for example, we had in our capital program  
5 a -- plans for \$23 million to be invested in creating 12  
6 health care centers around the City of New York,  
7 targeting those areas in New York City where we have the  
8 greatest death, the biggest lack in health care services.  
9 And as a function of these cuts in the City of New York,  
10 we are losing that ability to create.

11 So we are turning to shoestring funding  
12 approaches. We're turning to basically looking for  
13 churches to do something in a basement. We're looking to  
14 do collaborative work with other groups, etc., etc., etc.  
15 So we're facing major problems in those areas.

16 And this are two substantive serious, serious  
17 issues that we have. Again, once we get the resources up  
18 and running, there has to be still a lot of education.  
19 You know, people have been taught for many, many decades  
20 because of the lack of adequate facilities to use  
21 emergency rooms.

22 So we need to really educate people very  
23 seriously to the use of alternative facilities that are  
24 able to provide services in a more comprehensive fashion.  
25 Where we can provide comprehensive services around the

1 case managed system, which we feel is the only rational,  
2 the only scientific and the only humanistic way to  
3 provide care for Latino communities.

4 DR. GUTIERREZ: Would you like to comment and  
5 tell the Commissioners if you had to fix five things in  
6 this system so that care can be much more easily  
7 accessible, what would you say?

8 MS. AMARO: Well, he's talking about that --  
9 okay. About all the different places and how they're  
10 trying to build better places. But here in Chicago is  
11 real poor. And the services is real poor. Like, the  
12 Howard Brown Clinic -- now that's a place to help people  
13 with AIDS or HIV infected.

14 And my sister -- she was getting services there  
15 until finally, she didn't have no food at her house and  
16 everything was going real bad for her. She called there  
17 and they said, well, we can't help you because this is  
18 only for gay people. See?

19 So there's a lot of things that need to be  
20 improved here in Chicago. Like, some of the doctors has  
21 to be educated how to treat patients, not to be scared of  
22 treating patients. And there's some doctors that  
23 sometimes they react. I've seen -- I don't want to catch  
24 AIDS. You know, and sometimes -- there was one that hit  
25 me -- you know, so there still needs to be a lot of

1 things done here in Chicago.

2 And like housing for people that could pay low  
3 housing because it's real high here in Chicago and it's  
4 hard for people to try to understand where you're coming  
5 from, what's happening, what you're going through. And  
6 so it's real hard for you to try to get through to them.

7 DR. GUTIERREZ: I just want to say that from my  
8 own personal experience as a clinician in a community  
9 health center that was affiliated with a municipal  
10 hospital that in the seven years of practice, we had an  
11 extremely low no show rate. We had maybe five percent of  
12 the patients missing appointments. People were  
13 "compliant". People were very much involved in taking  
14 care of themselves and were very pro-active about  
15 becoming educated about HIV and AIDS.

16 And certainly wanting to get tested. They  
17 requested the tests, but at that time, we only had  
18 anonymous testing sites that were testing patients on a  
19 regular basis. And the patients would not go to  
20 anonymous testing sites. They wanted to be tested on-  
21 site. The issue of confidentiality in a neighborhood  
22 clinic took second place to being walked through that  
23 process by someone who they trusted and had some kind of  
24 working relationship with.

25 It seems reasonable and we've all seen the

1 success of this community health center model in a number  
2 of areas -- in prenatal care, in geriatric care so that  
3 it seems ridiculous for federal government to make  
4 statements about shifting monies away from community  
5 health centers and putting them in infant mortality  
6 approaches.

7 It just doesn't make any sense. And I think  
8 that if something works, let's keep it. Let's build on  
9 it. We have money for patriot missiles. We should have  
10 money for this.

11 With regard to issues of income maintenance  
12 which Paula spoke to, HIV and its related illnesses is  
13 characterized by an asymptomatic period followed by a  
14 period of clinical decline and then fluctuating periods  
15 where there's inter-current illness.

16 The HIV positive patient has, of course, an  
17 enormous burden. They lose their jobs. They often have  
18 difficulty paying rent and they can't sustain their  
19 families.

20 In your experience, Manuel, as a social worker,  
21 what are the essential elements that need to be built  
22 into the social service system so that it provides a  
23 smooth transition for the HIV positive individual who  
24 does not have AIDS?

25 MR. FIMBRE: Keeping in mind the model that Dr.

1 Gutierrez spoke about at the beginning, that any  
2 community must have in place services in at least four  
3 major areas, one of which is education. Since education  
4 is our only weapon so far for prevention.

5 The other one is the health and mental health.  
6 A well developed and continuum of care from in-patient to  
7 out-patient to community based. And the third quadrant  
8 is that of income maintenance. Fancy terms -- keeping  
9 body and soul together. Paying the bills. Perhaps this  
10 is what this quadrant addresses.

11 And here basically the Hispanic community is  
12 dependent or inter-dependent on the services that the  
13 country provides. Sooner or later, we come knocking on  
14 the doors of the welfare department of social security.  
15 And here what is needed is a strong advocacy component so  
16 that there will be a short turnaround time so that --  
17 almost presumptive eligibility.

18 Presumed that they are eligible, provide the  
19 services and -- and the funds necessary to keep some  
20 degree of quality of life. This strong advocacy group, I  
21 think, is necessary if we're going to hold these agencies  
22 accountable, both Social Security and the various  
23 departments of welfare.

24 So a mechanism to make them responsive is  
25 absolutely necessary.

1           The second point that was spoken about is there  
2 is a need for the establishment of emergency funds.

3           There may be funds for persons with AIDS. There are no  
4 funds for HIV positive people that may just be showing  
5 some of the symptoms. But their bills are just as real.

6           I admire the State of California -- the State  
7 of -- what's your state -- where there is a law there  
8 that says that they cannot discharge people from the  
9 hospital if they don't have an address. I understand  
10 that this puts a burden on the health care system. They  
11 should not be hotels. They should not be providing  
12 housing for people who no longer need medical care.

13           But, at the same time, I would like to see this  
14 law, I think, extended nationwide so that nobody can be  
15 discharged from a medical treatment center if they do not  
16 have a place to go to. And for the community to really  
17 work in collaboration in providing affordable health  
18 care. So there is a need for this emergency funds to be  
19 developed.

20           And the other final concept with respect to  
21 income maintenance is we need to think in terms of who is  
22 the client? The identified -- the person with AIDS in  
23 our way of thinking is simply the identified patient.  
24 The client is really the family, whether it be family of  
25 choice or family of origin.

1           And here you have generational issues. You can  
2 have, for example, mother being infected, but -- and she  
3 will die. Grandmother will take care of the younger  
4 generation. So here we -- a number of governmental  
5 agencies come into play. Protective services, child  
6 protective services, foster care, as well as Social  
7 Security, custody issues arise.

8           And so many of our programs are categorical and  
9 fragmented. They are unable to truly conceive as the  
10 family -- the care givers -- as truly being the client to  
11 work with and strengthen rather than just the identified  
12 patient.

13           DR. GUTIERREZ:    Would you like to add other  
14 recommendations?

15           DR. CARRILLO:    I'd like to bring up another --  
16 another topic if I may.

17           DR. GUTIERREZ:    Sure.

18           DR. CARRILLO:    We have a very peculiar  
19 situation that is taking place in New York City, Chicago,  
20 Boston, which I will call the Puerto Rico, New York City  
21 Air Bridge. There is a very large incidence of HIV  
22 positivity in Puerto Rico, as there are -- as there is in  
23 New York City and other parts of the east coast.

24           And what's happening is very tragic in that in  
25 Puerto Rico, the Medicaid cap does not allow for -- for

1 funding for AZT. So it's harder for people to be able to  
2 fund AZT. So, very often in the early stages of the  
3 illness, people will travel to New York City in  
4 particular, as we have experienced in New York, and I'm  
5 sure also to Chicago and Boston and other places in the  
6 same access, for the treatment.

7 Now they leave behind their loved ones. They  
8 leave behind their -- their family, their social  
9 supports. They leave behind very much.

10 They come here and basically find their way, I  
11 guess through word of mouth -- find their way through the  
12 system. Conversely, when people then tend to become more  
13 ill in the latter stages of their illness, they tend to  
14 go back to the islands. And, again, when they go back to  
15 the islands, there's no case manager, there's no doctors,  
16 there's no group there accepting them, accepting the  
17 medical record, plugging them into a continuum of  
18 services.

19 And we have a real disjointed situation that  
20 basically reek havoc on the traditional migration  
21 patterns of the Puerto Rican people in the east coast.  
22 And this is something that has a lot of implications for  
23 prevention, for good managed care, for education, etc.,  
24 etc.

25 Besides doing something about the Medicaid cap,

1 which is something that I think given the situation --  
2 given this problem, it's really criminal that this is not  
3 addressed more forcefully by the federal government.

4           Aside from that, we need to establish case  
5 managed programs that basically bridge this gap. We need  
6 to set up programs in our cities and we're beginning in  
7 New York City to do that with Puerto Rico. This is  
8 something that I have spoken with Eunice about and I  
9 would like to just bring to your attention that we may  
10 need some support from this committee as the politics of  
11 doing this international bridging is very complicated and  
12 very difficult.

13           But we feel that we need to have this kind of a  
14 case managed approach to basically follow people that  
15 travel from one place to the other. We need to  
16 coordinate joint prevention programs with Puerto Rico.  
17 And we also need to talk about things like creating  
18 sister hospital relationships or sister city  
19 relationships so that we can better meet the needs of  
20 people who are suffering and are being disconnected from  
21 their social -- social support.

22           DR. GUTIERREZ: I'd like to bring up another  
23 aspect, which is the aspect of supportive services at  
24 this point. It's important for us to know here that the  
25 tradition of the Latino community is a multi-service

1 community based organization making itself responsible  
2 for the work and for the building of its community.

3           These multi-service groups generally have a  
4 tradition of about 20 to 25 years. They were involved,  
5 and have been involved, over those years in housing and  
6 in education and civil rights and in health care access  
7 issues. So that when we start looking at HIV AIDS, we  
8 look at it differently only because we enmesh it into  
9 every one of those problems that have been longstanding  
10 in our communities.

11           Especially the one that I did mention, which is  
12 substance abuse, which has been an epidemic in our  
13 community for as long as they've been -- for as long as  
14 we've settled in this country.

15           But that's important to say because when we  
16 need to make clear that it is not that we do not  
17 prioritize HIV AIDS the way that the gay community does.  
18 We just look at it differently. We enmesh it into the  
19 rest of these issues and make it part of every one of  
20 them.

21           That is why categorical funding doesn't work  
22 for us and that we have to use a more integrated creative  
23 source of approach so that people can identify what works  
24 best for them and permit them to actually do it. Of  
25 course, we always have an efficient and appropriate

1 evaluation tool, but it needs to be done in that format.

2 The reason why I raised this is because when we  
3 talk about supportive services in our communities, we  
4 want to say that we want to establish a network of  
5 support services internally and we want to work with it  
6 collaboratively with city, state and federal agencies.

7 And I know that, Manuel, you've had a lot of  
8 experience in that work. And I'd like for you to address  
9 it. And the kind of models that you see are viable.

10 MR. FIMBRE: With respect to supportive  
11 services, again, this is another fancy term. As you well  
12 know, that the AIDS HIV is a progressively debilitating  
13 disease, even though now it's becoming more of a chronic  
14 illness, it nevertheless -- the debilitation continues.

15 And a person may need help to meet the  
16 challenges of daily living, all the way from  
17 transportation, house cleaning, shopping -- you name it.  
18 And so there is a need for practical home support  
19 services to keep that person functioning in his or her  
20 home as long as possible. Otherwise, they're going to  
21 come into the hospital and run up a bill.

22 If we can keep them receiving care in their  
23 home as long as possible, I think that -- that would be -  
24 - that would be the ideal. And that's what they want  
25 themselves -- some quality of life surrounded by their

1 loved ones.

2 Here, various communities have developed a  
3 variety of mechanisms cooperating with -- let's say  
4 visiting nurses association or with other nurses that go  
5 into the home. We can help the nurses train the care  
6 givers so that the person with AIDS will receive the  
7 necessary support.

8 There are a number of issues that enter in  
9 here. Some will require things like minor home  
10 modifications. Where will the money come from to do  
11 these minor home modifications? They are necessary.

12 But with respect to the Hispanic community,  
13 again, what is really needed is an agency that is a  
14 family agency whose goal is to help families cope. To  
15 continue being care givers to the person with AIDS. And  
16 if we do not help them, either financially or  
17 educationally, the quality of life for that family will  
18 diminish.

19 A family agency of this nature can work with  
20 other professional members of the Hispanic community and  
21 develop them into volunteers so that they can also be of  
22 help to afflicted family members.

23 And, here I would urge you to use your  
24 leadership, mobilize the United Way, challenge the United  
25 Way, mobilize Family Services of America to develop these

1 family service agencies within the Hispanic community to  
2 help Hispanic families cope.

3 CHAIRMAN OSBORN: I know you have other points  
4 you want to raise and I also know we're running short of  
5 time and the Commissioners want to interact. So if we  
6 can be sure to get to the points you want, and then --

7 DR. GUTIERREZ: No. No. Ask the questions.  
8 Ask the questions. One second, please. Paula, do you  
9 have a comment to make in the area of supportive services  
10 like housing, supplemental stipends or anything else that  
11 has been a problem for you personally?

12 MS. AMARO: Yes. That is what we need a lot  
13 here in Chicago is like the housing and -- and services  
14 like child care and -- and be more open so that they  
15 could know that we do need all the support that they  
16 could try and give us.

17 COMMISSIONER DIAZ: I have a question for Dr.  
18 Carrillo. What percent of your beds now in your system  
19 are occupied with HIV AIDS?

20 DR. CARRILLO: We have approximately 28% of our  
21 beds.

22 COMMISSIONER DIAZ: One of the things that I  
23 think piggybacks on what Manuel Fimbre was saying is the  
24 need to really educate Latino families to really do  
25 greater part or participatory engagement in home care --

1 home health care. Specifically, beyond the social  
2 service functions.

3 Has your system developed any kinds of plans  
4 whereby families that wish to take patients at really at  
5 a certain point do not need to be hospitalized, could  
6 go -- undergo training and really provide some of that  
7 care within the home? Or do any of you on the panel know  
8 of any state that has reimbursement for family members or  
9 extended others to care for these individuals at home,  
10 thus reducing the in-patient load and at the same time  
11 providing care that is very much desired by people and  
12 can be given?

13 DR. CARRILLO: That's a very good question. We  
14 have a very aggressive program in development -- further  
15 development of home health care. Corporation has been  
16 attentive to home health care for at least some seven  
17 years now and under this administration, we're moving  
18 very aggressively to put a lot of resources there.

19 And we are recruiting, we are training and we  
20 basically have in two-thirds of our hospitals have  
21 strong home health care programs ongoing. And we plan by  
22 next year to provide home health care services in every  
23 borough of New York City. We do not have opportunities  
24 to have family members reimbursed, that I'm aware. I  
25 don't know whether -- we do not. That's not something

1 that has made its way to New York City yet.

2 We are also -- the need for development of more  
3 long term care beds is something that we're also facing.  
4 We were able to salvage the development of two long term  
5 care facilities from the budget ax. And we're moving  
6 with those in Brooklyn and in Queens -- developing two  
7 long term care facilities with about 300 beds each. In  
8 each of those facilities, we expect that a fourth of the  
9 beds will be people with HIV. And for that reason, the  
10 long term care facilities need to be architectural design  
11 -- a lot of the conditions are different than the  
12 traditional building of long term care facilities that  
13 are geared for more geriatric patients that did not care  
14 for younger people to have -- you know, much more needs  
15 in their treatment plan.

16 COMMISSIONER DIAZ: I just wanted to express a  
17 word of appreciation to Paula for being on this panel.  
18 Paula, you and your sisters who are sitting in the  
19 audience -- the Hispanic community owes you a great debt  
20 of gratitude for sharing your story on the Women AIDS  
21 video that has been seen by thousands of communities.  
22 And I applaud you for that in a very special way.

23 (Applause.)

24 MR. FIMBRE: Let me respond to your question  
25 about whether any state helps the family to take care.

1 Unfortunately not. This is part of our English patrimony  
2 remnants of the Elizabethan poor laws which is a  
3 responsible relative concept.

4           However, these relatives are indeed responsible  
5 and they want to help. But they need help in helping.  
6 And I wish we could change that concept.

7           DR. GUTIERREZ: I just want to add something  
8 to that note as well because it is so important for us to  
9 know that our families, extended an immediate -- have  
10 been taking care of each other for many, many years.  
11 Especially during the heroin epidemic and then the crack  
12 epidemic, in terms of caring for their elderly parents.

13           All of this has been going on and it is not  
14 secret information. People know this, but with HIV AIDS,  
15 there are an enormous amount of misconceptions and myths  
16 within the family with regard to care of that individual.

17           The whole issue of isolation, of washing things  
18 over and over, of bleaching everything down, of treating  
19 the individual with a lot of love, but with a lot of  
20 distance a lot of times. And that creates an enormous  
21 amount of emotional pressures for both the HIV positive  
22 individual and the family members. And that kind of  
23 confusion requires education.

24           The community health centers can't play that  
25 role. We are simply falling apart with regard to all of

1 our other responsibilities. But, certainly, in some way,  
2 shape or form, we can design programs, the funding, to be  
3 able to focus on in-home care.

4 CHAIRMAN OSBORN: Harlon Dalton.

5 COMMISSIONER DALTON: I'm very struck by how  
6 many times already this morning the concept of family has  
7 been mentioned or -- or invoked. And I'm struck by how  
8 differently the world of AIDS looks if you start out with  
9 the idea of the -- of the client, or at least the  
10 affected unit being a family rather than an individual.

11 To put it differently, I do think that much of  
12 our early learning around this disease was in terms of  
13 individuals being affected by HIV. Individuals who were  
14 perhaps estranged from their families, individuals whose  
15 support systems weren't really familial, but rather  
16 community -- but a different community than the kind of  
17 community that's been talked about today.

18 So what we're really hearing today is a totally  
19 different conceptually -- but also in the real world a  
20 different way of thinking about who it is that's affected  
21 by this disease and how we set about helping them.

22 And everything changes if you start out  
23 thinking as the family as a central unit. As Professor  
24 Fimbre mentioned, the programs in place for helping  
25 people are by and large individualized. They're

1 fragmented. You have programs for young people. You  
2 have programs for the elderly. You have programs -- but  
3 the programs don't -- aren't really conceived with the  
4 family as a system in mind.

5 The questions of confidentiality are different  
6 if you think about the family as an affected unit. As  
7 Dr. Gutierrez said, there are lots of people who, in  
8 fact, won't go to anonymous testing sites because they  
9 would rather have their testing provided by people with  
10 whom they have developed an ongoing relationship in the  
11 home community.

12 And now I'm sort of adding family and community  
13 as a second sort of notion that's been stressed and  
14 stressed, including community health centers as against  
15 hospitals. Why? Because community health centers are  
16 more -- friendly was the term you used, but I think are  
17 more familiar because those are places where the  
18 likelihood is greater that there will be cultural  
19 competence, to pick up one of the terms from the earlier  
20 panel.

21 Once you think about family as an issue, then  
22 reimbursement seems to look a little bit different. Then  
23 we begin asking questions like how much -- can we  
24 reimburse family members who, in fact, are providing home  
25 care? Home care becomes much more important when you're

1 thinking about the family and the home as the focus for  
2 HIV prevention, as the earlier panel talked about. And  
3 the family and the community as a focus for HIV care and  
4 treatment, as this panel has talked about.

5 So I just wanted to underscore, or at least  
6 feed back, what I've been hearing. Paula talked about  
7 child care. I mean, if you're talking about families  
8 being affected by HIV, then you need to think about  
9 taking care of children while other members of the family  
10 are taking care of each other or getting people to the  
11 hospital or whatever. So there are a whole set of issues  
12 around families that really come to the fore.

13 I guess I should probably ask a question rather  
14 than simply -- but I'm really just repeating back what  
15 I've heard. The question I have though is really --  
16 Professor Fimbre mentioned at one point that one  
17 possibility is that we maybe need a family agency to kind  
18 of put the spotlight on this issue and to help us pull  
19 fragmented programs together from a family assistance  
20 perspective.

21 You know as well as I do, that in this  
22 political climate, that's not going to fly. That it's  
23 the idea of another agency or another program. But so I  
24 guess I want to ask you how I mean, other than you all  
25 working 48 hours a day to keep putting out this message,

1 how can the way in which, not only this disease, but  
2 health care delivery or why not just health care delivery  
3 and social service delivery?

4 How is it possible to sort of re-think this in  
5 a way that does change our thinking to a community focus  
6 and a family focus? How can we do that other than having  
7 a family czar?

8 DR. FIMBRE: That sends shivers up my spine --  
9 a family czar. I think there is a need to conceptualize  
10 the relationship between family and community. The  
11 family does not live its life in isolation. We believe  
12 that families make communities and communities can  
13 destroy families.

14 Think of a concept of a crack house, for  
15 example, in your neighborhood and the negative impact  
16 that that has on family living. So we conceptualize that  
17 the community should be supportive of families. And  
18 there is a relationship of inter-dependence and  
19 reciprocity between families and communities.

20 If you start from that point, then it becomes  
21 all the more important to truly have an agency that can  
22 both develop community, develop the appropriate community  
23 resources to truly be supportive of a family.

24 And we believe that the case managers have a  
25 unique role since they are involved in providing the

1 health and mental health, the income maintenance and the  
2 supportive, they are also in a unique role to spot gaps  
3 in services and to document gaps in services.

4 So the -- in our part of the county -- Santa  
5 Clara County, San Jose, where I come from, we are seeing  
6 that the case managers also have a data gathering  
7 obligation, as well as a community development function.  
8 They should be talking to the leaders of industry, as  
9 well as government and the private sector to begin  
10 filling in these gaps in services.

11 So that's generic -- an umbrella response to  
12 your comments, but I think -- I think you've captured the  
13 essence of what we're saying here.

14 DR. GUTIERREZ: Well, I'd just like to -- can I  
15 add something to that? And that is that it is important  
16 to note that while our experience in general is  
17 different, that the gay community has also handled this  
18 as a family disease. Except that their family is defined  
19 differently by virtue of them being alienated, either by  
20 their own families or by virtue of their gender  
21 preference.

22 And so that within our communities, which have  
23 a percentage of individuals who are gay, but who are not  
24 necessarily public about it for the same reasons, also  
25 have the same issues that kind of swing back and forth

1 from the particularities of the gay communities' family  
2 structure and the traditional family structure.

3 So that just needs to be said so that it's a  
4 complete picture.

5 CHAIRMAN OSBORN: Thank you, very much. I  
6 think probably in order to turn to the next very  
7 important topic, we'll have to move on. But I think it's  
8 on behalf of all the Commissioners, I thank you for an  
9 exceptionally important set of testimonies. Thank you.

10 DR. FIMBRE: Dr. Osborne?

11 CHAIRMAN OSBORN: Yes.

12 DR. FIMBRE: May I just make one short comment?

13 CHAIRMAN OSBORN: Sure.

14 DR. FIMBRE: If you have the ear of the  
15 President, please ask him to declare war on the  
16 homelessness. Please ask him to declare war on  
17 inadequate health care and to establish deadlines by  
18 which these -- you know, these achievements -- draw the  
19 line.

20 CHAIRMAN OSBORN: We'd like nothing better than  
21 to do that, but it takes some time. Thank you, very  
22 much. Let's move on.

23 The next panel will be dealing with issues of  
24 migrant, rural and undocumented populations. And if they  
25 could come join us, we would appreciate it.

1 I have a feeling our next panel knows how  
2 they're going to proceed more than I do in detail. And I  
3 wonder if I could also ask you to introduce yourself so I  
4 don't do such a dreadful job on my pronunciation. I'm  
5 really quite embarrassed not to speak Spanish.

6 So if you would proceed, we're looking forward  
7 to hearing from you.

THE MICROWAVE COMMUNICATIONS CORPORATION

IV. MIGRANT, RURAL and UNDOCUMENTED WORKERS

101

DELIANA GARCIA

1  
2 MS. GARCIA: Great. My name is Deliana Garcia.  
3 I'm with --

4 CHAIRMAN OSBORN: Excuse me just a second. May  
5 I ask the people in the room to be a little bit quiet  
6 because we are running so late that we must indeed  
7 proceed. And if you have conversations outside, that  
8 would be helpful. Go ahead.

9 MS. GARCIA: Okay. Let me start again. My  
10 name is Deliana Garcia. I'm with the National Migrant  
11 Resource Program. I'm the Director of Special Projects  
12 there.

13 I was fortunate enough to testify in front of a  
14 smaller group of you in Dallas. And I'm really pleased  
15 for the opportunity to be on a panel with these two  
16 folks, because I think we need to broaden the issue a  
17 little bit.

18 To my right is Samuel Martinez. He's the  
19 Corporate Vice President for Migrant Child Institute,  
20 Washington State Migrant Council. And to his right is  
21 Barbara Garcia, Executive Director of Salud Para la Gente  
22 in Watsonville, California.

23 I think that we are a nice grouping because you  
24 have had folks speak to you about eligibility, about  
25 travel or migration, case management access, absence of

1 services, ethnic variations within the group, alienation  
2 from their community.

3 And what we want to talk to you about are some  
4 things that might be considered microcosms of all of  
5 this. And that if you were able to do anything to affect  
6 the two populations that we'd like to speak to you about  
7 most particularly, that these things would have  
8 application for other communities that you've talked  
9 about as well.

10 I would like to start by speaking to you about  
11 migrant and seasonal farm workers. And what I hope you  
12 will keep in mind is that a majority of these three to  
13 five million individuals are U.S. citizens, contrary to  
14 popular myth. And they have the very important job that  
15 none of us could survive without, which is to feed us.

16 Very little is known about them. Very little  
17 work has been done to gain any kind of information about  
18 them. What we do know though is that of the folks that  
19 we can keep track of, 40% of them leave the migrant work  
20 force and go into urban centers.

21 The ones that you've been talking about now  
22 where there is little service, little information,  
23 variations in language, and they go to those areas  
24 completely uninformed about the disease of HIV. They  
25 have come from an environment where they have worked long

1 hours. They've had low wages. They've had abysmal  
2 housing and they've been exposed to things like  
3 pesticides and other toxic environmental problems.

4 There is little government regulation for  
5 migrant and seasonal farm workers. They don't get  
6 coverage for workman's compensation. You cannot make  
7 sure that any of their employers will do their Social  
8 Security. So that if anything should happen to them,  
9 they don't have the standard recourse that's available to  
10 most American workers.

11 30% of all farm labor is performed by children.  
12 Child labor law in this country makes sure that children  
13 under the age of 16 cannot work except in agriculture.  
14 And then you have exemptions for children 10, 11 and 12  
15 years of age so that they can be out in the fields  
16 working.

17 And even with these few requirements under the  
18 law, there is little monitoring to make sure that anyone  
19 is complying. You have no toilets; you have not potable  
20 water; you have no water for washing your hands. And it  
21 is in this kind of environment that we would like to make  
22 sure people have some information about HIV.

23 And it's really important also that on this  
24 occasion that you've started to look at children in the  
25 Hispanic or Latino communities that we talk about

1 children of migrant and seasonal farm workers. The rate  
2 of parasitic infection for them and preventable diseases  
3 really lets us know that the type and amount of education  
4 and prevention work that needs to be done with this  
5 community is incredible.

6 If you've got kids suffering from parasites  
7 similar to the kinds that you do in third world countries  
8 and they are right here working in our labor force, how  
9 is it that we anticipate we are going to bring them up to  
10 speed on an epidemic that has knocked the socks off of  
11 this medical and health community and this country that  
12 has so many advantages and so much information available  
13 to them.

14 You've talked about child care. And there is  
15 no child care to speak of. There's less now than there  
16 was ten years ago for migrant and seasonal farm workers.  
17 It has gotten worse.

18 Exposing them, then, to chemicals and dangers.  
19 Every season in every major farm community in this  
20 country, there will be a child lost to being run over by  
21 a tractor because they were left between the roads  
22 because the mother was not able to attend to them  
23 anywhere else. Or they'll be lost because they were  
24 locked in the car and suffered heat stroke, asphyxiation  
25 or fire.

1           And all of that is still going on in the  
2 community that we're trying to educate for HIV.

3           Services available to this community. While  
4 there are three to five million of them, only 600,000  
5 receive health services -- receive medical services.  
6 Let's not fool ourselves. It's not health services  
7 they're getting. It's medical services that they're  
8 getting.

9           And for that, what Congress has set aside is  
10 \$100 per person that is seen through that system. Okay?  
11 And that's for the whole year for medical services. With  
12 that kind of money then, we want to look at affecting HIV  
13 and providing them with the kind of health care that we  
14 know that that disease requires. Even through a primary  
15 health care system, which we know is the best mechanism  
16 for treating them with those kinds of dollars.

17           That -- that, really by the way, if you haven't  
18 done a little math on it is 12% of the population of  
19 migrant and seasonal farm workers having access to  
20 medical attention.

21           We have been able to do a recent study about  
22 them. And we've balanced for ethnic groups, language  
23 use, levels of poverty and migrant farmers workers  
24 continue to demonstrate an even lower level of health  
25 status than what you might see in what is considered an

1 equivalent counterpart when you balance for language and  
2 money and location.

3           What we know if, for example, that women who  
4 are migrant and seasonal farm workers -- when they come  
5 into the clinics and they're between the ages of 20 and  
6 29, most of them are coming for OB care or a sexually  
7 transmitted disease.

8           Men of that same age group are also coming in  
9 because of STD's or something like scarlet fever. So  
10 that we're not seeing people come in for anything but  
11 really exaggerated and now fairly extensive health  
12 problems.

13           And the other thing that we can tell you from  
14 migrant and seasonal farm workers is that if they don't  
15 access one of the few migrant health centers available to  
16 them, they go directly to the emergency room.

17           And emergency rooms, we already know,  
18 particularly in rural settings, are being closed because  
19 there is no money to support the hospital in that area.  
20 So one of the few health resources available to them is  
21 starting to drop off.

22           Not considering the fact that it's now, because  
23 -- while the National Health Service Corps has been re-  
24 upped, we have lost that as a resource for physicians who  
25 were willing to go out into these -- you know, hard hit

1 areas because we couldn't get anyone once they'd done  
2 their commitment to the government, to stay in those  
3 communities.

4 They'd go off where there was a change to do  
5 less harsh, perhaps more financially rewarding, medicine.  
6 And not stay in rural communities.

7 But as far as HIV in the migrant and seasonal  
8 farm worker population nationally, the sero prevalence  
9 rate is really low. What -- what we know is that it's a  
10 window of opportunity right now. That they're engaging  
11 in all the same kind of high risk behaviors that we've  
12 talked about for years now.

13 And they're even doing some that are considered  
14 positive health practices. Okay? They share syringes to  
15 inject vitamins and antibiotics because they want to stay  
16 healthy. But that, in and of itself, if we cannot talk  
17 to people and have not in the last few years been very  
18 successful at educating people about risk behaviors that  
19 we are wanting to consider negative and jump up and down  
20 on the group bench about how bad that is going. And  
21 whether or not someone is willing to use a condom and  
22 whether or not we make condoms available to them.

23 How is it though unless we are more specific  
24 and more particular in our work that we educate people  
25 about positive health practices that also endanger them

1 of HIV infection.

2 But the other thing that we need to keep in  
3 mind is for migrant and seasonal farm workers, the ratio  
4 of male to female for infection is one to one. As many  
5 men and as many women are being infected. And this group  
6 is -- is like a petri dish. It's a group that's  
7 alienated from its communities because most people do not  
8 want to accept farm workers.

9 For example, there is the community in the  
10 northeast that relies on them tremendously. And they  
11 just passed a law that there will be no farm worker  
12 housing in their city limits. And this is still the same  
13 sort of thing that's going on. Okay?

14 And we -- and I'm sorry. So I'm getting kind  
15 of wild eyed now. So that I would like for us to  
16 consider them an opportunity to make things happen in  
17 such a way that we know that they could translate for  
18 other special communities. If you have such a low  
19 infection rate, but in one year's time we have seen such  
20 radical rate increase.

21 For example, as you see in the northeast in the  
22 Delmarva Peninsula, where from one year it was in the  
23 point something range, and it is now in the positive four  
24 to five percent range. And I don't mean that it jumped  
25 that radically. Perhaps our testing got better. Perhaps

1 our reporting got better.

2 But I also think it demonstrates that it's  
3 starting to explode and we're losing our chance with this  
4 particularly mobile population to get in there, to  
5 educate, to test, to provide them with treatment, to look  
6 at things like case management.

7 When I testified before you in Dallas, I spoke  
8 to you of a young woman who was in this country working.  
9 Was infected at a hospital when she had her child. As  
10 she migrated, nobody would treat her. No one would do a  
11 T-cell check because no one wanted to be responsible for  
12 her care.

13 And so those folks then, if we are able to come  
14 up with a system of case management, which is something  
15 that you've heard about. Where we've talked about  
16 breaking down the eligibility requirements across the  
17 states. Where we could make people then not overly  
18 responsible if they didn't feel like that person was a  
19 member of their community, but we had some way of easing  
20 their access into care. So that as they continued to  
21 travel up and down, continuing to labor, they could get  
22 back home.

23 So I would ask you then that we integrate  
24 prevention services, that we look at community based  
25 organizations, that we look at the existing services that

1 are already in place. For example, the migrant health  
2 centers. That we not see the need to create a new agency  
3 or have the family czar. But those things that we've  
4 heard about working in other communities are already in  
5 place.

6 And that we extend their ability to help beyond  
7 the limited constraints that they're involved in right  
8 now. I would like for you to hear some of what is going  
9 on in Washington State and -- and Sam can also talk about  
10 what is going on in some states surrounding him about  
11 what has been effective in trying to work with migrant  
12 and seasonal farm workers.

13 SAM MARTINEZ

14 MR. MARTINEZ: Deliana has given our report  
15 pretty much.

16 CHAIRMAN OSBORN: And very eloquently.

17 MR. MARTINEZ: So I'll try to fill in a little  
18 bit more.

19 I want to thank you for inviting us here.  
20 Thank you Eunice Diaz. Of course, she is one of our  
21 champions throughout the country. So I'm very  
22 appreciative that I was asked to participate. I want to  
23 be able to give you a little bit of rural America,  
24 particularly those areas of the northwest where the  
25 migrant farm workers work, live and raise a large family.

1           In the States of Montana, Idaho, Oregon and  
2 Washington, we work the four states. I must first  
3 commend you for the work that you've already done in the  
4 areas of the rural America.

5           Your Report No. 3 speaks of some horrors. And  
6 I want to let you know that they are still alive and well  
7 and expanding in those areas.

8           We -- like I said, we work in the four states.  
9 And the difficulty of working in particularly those four  
10 states is the -- is the rural -- the scarcity of  
11 populations and resources.

12           In Montana, for example, we have a project in  
13 Billings. And in order to get to the west side of  
14 Montana, you need to get up early and cross over to  
15 deliver -- you know, seminars, talks, information to  
16 the -- to the farm working population in that area.

17           So in Idaho it is pretty much the same way. We  
18 have an over population of skin heads that make it rather  
19 difficult for us to work in that area. So we kind of  
20 stay away from there and work in the southern part of  
21 Idaho where there's -- you know, more of the farm working  
22 community.

23           In terms of services in that state, it's not  
24 one of our more progressive areas that we work in.  
25 Oregon is pretty much the same. In Idaho, we work

1 through the family and child care centers. What we do is  
2 that we meet with the parents at each one of those  
3 centers as a parent advisory committee. And we attempt  
4 to make with them and to deliver the kind of information  
5 that is relevant to them.

6 In Oregon, we work through the clinics pretty  
7 much the same way. The clinics, the community meetings -  
8 - wherever it is that we can meet -- meet with this  
9 population, we do so.

10 We have had the problem of, you know, lack of  
11 cooperation from the schools. Schools have always looked  
12 at us at outsiders, especially in the area of health.  
13 They've gone to the health departments and they are  
14 quickly finding out that the health departments are not  
15 equipped to provide the services to a mono-lingual  
16 community. So now they're calling us in. Now we are  
17 partners with the public schools.

18 Washington State -- we have both the clinics  
19 and the day care centers in which we work. Again, one of  
20 the most difficult aspects of the work -- prevention work  
21 that we do is the lack of a credible information system  
22 that we can deliver messages to our folks in the language  
23 that they can understand.

24 So, a few years ago, we developed our own radio  
25 station. It's called KDNA and it's known as Radio Carena

1 but it's now rapidly being recognized as Radio Sida  
2 because of the amount of information, not only the  
3 sexually transmitted disease, but the substance abuse and  
4 the AIDS.

5 We have a twice a month, we have talk shows --  
6 one hour -- in which we talk about -- about the problem,  
7 prevention, etc., etc. And we get a lot of calls. A lot  
8 of calls about people who want to know do I have the  
9 symptoms? Where can I meet with somebody? There's --  
10 there's still a lot of denial, a lot of reluctance, in  
11 taking the test, for example.

12 I mean, I personally had that kind of problem.  
13 I will admit that only last December did I decide to go  
14 through a testing at the University Hospital in Seattle.  
15 And waiting for two days for the answers was extremely -  
16 - my wife began to question why I wanted to take it. And  
17 so I can understand what kind of problems folks go  
18 through.

19 However, we are now beginning to experience --  
20 we are now beginning to experience a change in attitudes.  
21 People are beginning to understand that this is not -- it  
22 doesn't necessarily mean that they have the disease and  
23 they understand that through the messages that we  
24 provided -- we provide to them like transmission by  
25 shared needles and syringes is increasing among the IV

1 drug users. We tell them that the transmission by sexual  
2 intercourse is increasing in the heterosexual population.

3 They begin to hear the message over and over  
4 and over. And they're becoming more comfortable with  
5 that kind of -- with that kind of a practical chat or  
6 talk. So -- so it's a little more -- it's a little  
7 easier for us to communicate and to have these talks with  
8 them.

9 Let me see what else I can -- the churches --  
10 we are just impacting the churches. We have just met  
11 with the bishop, spent a whole day with him. A new  
12 bishop in this particular region. And he's opening up  
13 the doors. He's letting us talk from the pulpit, much  
14 like the recent war. The priests determine what it is  
15 that we can say. And what it is that we can't say.

16 Recommendations -- let me just briefly  
17 recommend that I know that some have spoken against a  
18 national approach to the problem. Let me tell you, when  
19 you're talking about a mobile community that moves from -  
20 - from the state of Coahuilla and Tamaulapis in Mexico,  
21 into Texas, into California and into Washington State and  
22 those western states, we look at the situation much the  
23 same way as the national migrant head start looks at  
24 dealing with this particular situation.

25 We have a project right now. It's called Even

1 Start, in which we work with 40 families in the State of  
2 Texas and 20 of them move to Michigan and 20 to  
3 Washington State. And we follow those families,  
4 providing the case management approach to -- you know, to  
5 dealing with their issues from illiteracy to child care  
6 to resources and etc., etc.

7 So I'm suggesting that we begin to look at --  
8 especially in the migrant community -- that we begin to  
9 look at a national approach to this particular situation.

10 Dr. Carrillo spoke about the international  
11 issue. I think we need to start looking at that very  
12 seriously. Especially like I mentioned in Mexico, the  
13 different states, we get a lot of populations from those  
14 states. So we need to make that connection and work  
15 jointly with those folks.

16 Thank you very much.

17 BARBARA GARCIA

18 MS. GARCIA: Okay. My name is Barbara Garcia.  
19 I'm the Executive Director of Salud Para la Gente. Salud  
20 Para la Gente means help for the people. Talking about a  
21 family model, community health centers -- I can't  
22 emphasize enough as a model for mainstreaming the AIDS  
23 issue, especially in the Latino community.

24 Our agency provides primary care services,  
25 mental health services and social services. And when the

1 AIDS epidemic hit our community, we integrated that issue  
2 into our regular system. In fact, we had to be more  
3 sensitive to the issues of gay men. We had to be more  
4 sensitive to the issues of IV drug users through the  
5 staff through our policy boards.

6 But we can do it within those kind of models.  
7 The issue at this point is that our monies are being  
8 taken away from us. And I think that we need to be  
9 looking at increasing monies to community health centers.  
10 We are the safety net for communities, the county health  
11 system. We are the safety net for those hospitals.

12 We keep the people out of the emergency rooms.  
13 We keep the costs down for those hospitals. And we're  
14 probably one of the most cost effective health systems  
15 there is in the country.

16 But I'd like to talk to you today about the  
17 issue of one of the most fragile populations in the  
18 Latino community, and that is the undocumented  
19 population. And also how the HIV infection impacts that  
20 community.

21 But, in order to understand the community and  
22 the dilemmas of the undocumented population and Latinos  
23 in our country, we have to take in consideration the  
24 historical contribution that this population has made to  
25 the labor force in the United States.

1           The undocumented worker has fulfilled  
2 tremendous gaps in the labor force fluctuating in the  
3 times of war, recession and to the need of particular  
4 industries. This labor force has gone where no other  
5 labor force will go. The picking of strawberries,  
6 grapes, and closer to home, building a railroad to  
7 Chicago.

8           In exchange for this labor, workers were  
9 promised legal status, temporary status and many times  
10 forced and exported out of the country once their labor  
11 was not needed.

12           The guest labor program Busaro program, and the  
13 newly executed -- one of my favorite programs --  
14 Immigration Reform Control Act -- IRCA -- have recognized  
15 the undocumented population, have federally legislated  
16 the undocumented population. And even in the 1990 census  
17 have counted the undocumented population.

18           To say the least, this population is  
19 legitimized. The IRCA program provided millions and  
20 millions of dollars to government entities. And I say to  
21 government entities -- not to the people, but to  
22 government entities. For medical, education and public  
23 assistance access, but failed terribly.

24           They failed because of the historical  
25 mistreatment of the Immigration and Naturalization

1 Service and the distrust of the community and the  
2 misinformation that the INS programs gave to that  
3 community. And basically, they told them, do not receive  
4 any type of care from anybody at any time.

5 Those today who remain undocumented still work  
6 because the labor force requires it. So the access to  
7 medical care and social services to this population are  
8 at risk. The fact that if they'd access any type of this  
9 service, they can be deported and separated from their  
10 families.

11 Testing sites and medical services that are  
12 supported by the government and given by the government  
13 are not trusted. And the fear of deportation is  
14 extremely high. Those who become ill with HIV infection  
15 have little access and many return to Mexico to their  
16 families where, as we know, the HIV service are even more  
17 scarce.

18 A good thing is, and one of the positive notes,  
19 are the fact that community based organizations who  
20 provide education, medical services, social services,  
21 support groups, are the most successful with this  
22 population. They have the trust of the community and  
23 they have been coming to our community agencies for years  
24 and years. And will continue to come.

25 But the need to continue a bi-national

1 perspective on this issue is very important. We have to  
2 be able to link the country of origin of the person and  
3 really follow that. In our community, Michocanas is a  
4 place where many people come from and then they go back  
5 when the season's over.

6 And it's been on my wish list to be able to  
7 follow that migrant -- people who go back and be able to  
8 send back the messages of information to them.

9 So we have to implement programs that are  
10 border programs. And we have to continue to support  
11 programs that follow those migrant trails. And we must  
12 continue to promote and support compassionate legislation  
13 that's not based on a needs test of legality, but on  
14 legitimate need.

15 Like I said before, community clinics are -- I  
16 think one of the best providers of these -- this type of  
17 care. And we do not distinguish whether people are  
18 undocumented or documented. Although we are now forced,  
19 because of the IRCA program, to ask for some type of  
20 identification if they are an amnesty client.

21 But the implementation of the IRCA legislation  
22 will be more prefaced on this population and they will be  
23 forced to go further underground and further away from  
24 our educational messages and our medical services. So  
25 it's imperative that we advocate for this population.

1 And -- and also protect these workers and their ability  
2 to access care.

3 Thank you.

4 MS. D. GARCIA: What we can do is we can go  
5 back then and give you our recommendations in a chunk.  
6 We can also accept your questions now and broaden and  
7 flush out what we were saying for you a little bit more.  
8 I mean, that is an option. Whichever you would prefer.

9 Can we address any questions that someone might  
10 have right now?

11 CHAIRMAN OSBORN: Sure. Are there questions?  
12 It looks to me as if -- as if you've been hitting --  
13 Scott.

14 COMMISSIONER ALLEN: Ms. Garcia, I have a  
15 question about -- do you folks work with the Caribbean  
16 workers that come into Miami -- into Florida?

17 MS. D. GARCIA: Right. You're talking about  
18 the H-2 program. Yes. Uh huh.

19 COMMISSIONER ALLEN: One of the things that we  
20 heard in Florida recently was that the sugar companies  
21 were testing individuals and sending them back or being  
22 testing there before they come over or that kind of  
23 record keeping.

24 And it was unclear whether it was forced  
25 testing or how that works. And I'm wondering along the

1 migration route what type of relationship the industries  
2 have to the one being responsible for health care, which  
3 sounds like very little. But also being detrimental to  
4 the individuals as they pass through.

5 So, if you could --

6 MS. D. GARCIA: Sure. When you talk about  
7 forced testing, I think when you look at the economic  
8 system that these people are participating in, anything  
9 is forced.

10 Because they're trying to get a job and the  
11 sugar industry, and then also some of the northern  
12 industries that are -- that are fruits -- orchards, what  
13 they do is through the program, they say that they have  
14 offered these jobs at a wage that they think is  
15 reasonable, which, of course, no one in this country  
16 wants to take cause they're trying to force an increase  
17 in the wage. Then the growers or the companies can say,  
18 well, no one in this country took it.

19 We're going to invoke H-2 and we're going to  
20 bring somebody in. And we'll fly them in, clearly with  
21 the understanding that they can only stay here and work.  
22 And as soon as they're done, they're even flying them  
23 home from the northeast. So that anything that they put  
24 them through really is forced.

25 Even if they say this is at your own option.

1 What they say is if you want a job with us, you will do  
2 this. And folks want those jobs desperately, so they  
3 will.

4 But the other part of what doesn't get said is  
5 that many of those folks are infected in this country  
6 when they come to work. And many of those folks are  
7 being used to mule drugs by crew workers from Florida up  
8 the northeast coast.

9 And they get told, look, you're going to take  
10 these and you're not going to say anything. And this is  
11 part of the work that I want you to do if you want to  
12 keep your job cause I'm your crew leader and I can send  
13 you home in a second. And it's true. Those folks have  
14 absolutely no legal recourse. There is no way to  
15 complain. There is no way to come before any kind of  
16 grievance group. I mean, it is strictly at the whim of  
17 the grower and the person who acts as your sponsor that  
18 you get to stay.

19 Another example of that would be if you have an  
20 H-2 worker who comes into the sugar cane fields in  
21 Florida, and happens to machete his ankle, he gets sent  
22 home without medical services being provided to him other  
23 than absolutely necessary at that moment to perhaps stop  
24 bleeding.

25 And he's sent back without any kind of

1 workman's compensation for what has happened to him. He  
2 is now incapacitated and for the most part, will not be  
3 brought back by a grower next season because they're  
4 already weary of someone who's hurt themselves and they  
5 want to make sure that they don't bring them back into  
6 the country and give them an opportunity to start any  
7 trouble.

8 So then what you have is folks who will not  
9 declare an injury. So the companies are not behaving  
10 responsibly. And this activity is just one of those  
11 mechanisms that I believe is in place to keep people  
12 quiet. And to really force them into a position of not  
13 demanding what would be compassionately deserved to them  
14 for the work that they're doing.

15 COMMISSIONER ALLEN: Could you expand on the  
16 migration within the southwest? Do you find that same  
17 dynamic happening there or less abuse, more abuse -- or  
18 how is --

19 MS. D. GARCIA: Within the southwest, which is  
20 very different than the northeast, you have many more  
21 families. Certainly on the northeast, you have crews of  
22 single men while you do also have women working. A  
23 majority of those in the northeast or in the eastern  
24 stream are single men working in crews.

25 What's very common in the midwest is that that

1 stream begins in the lower Rio Grande Valley in south  
2 Texas. And they are families who migrate in cars and  
3 trucks as a unit north. And many of them go back to  
4 farms where they already have a relationship in the  
5 midwest.

6 It is not as abusive and certainly, those folks  
7 know that if you can make it out of Texas, you can get to  
8 Arkansas, where there's a little bit more money to help a  
9 migrant on his way to Colorado or Michigan. And  
10 Michigan, of course, has done so many great things that  
11 people are anxious to get to Michigan.

12 And one of the problems becomes that they don't  
13 have any money in Texas. There are no services. They  
14 can't get into a clinic who's not taking any new clients.  
15 So they pool what little money they have for gas to get  
16 to Michigan and they'll come way in advance of crops  
17 being ready for them.

18 And then that state is knuckling under and  
19 running out of money long before the season is over. And  
20 so we have this huge cycle of folks who are really trying  
21 to learn the system -- you know, and not being able to  
22 get anywhere with it because it's going to run out of  
23 dollars.

24 COMMISSIONER ALLEN: Thanks.

25 CHAIRMAN OSBORN: I'm sorry. Harlon. Excuse

1 me. I'm -- I'm --

2 COMMISSIONER DALTON: Scott says I have a  
3 statement or a question.

4 CHAIRMAN OSBORN: We've been talking about  
5 family. Harlon is part of our family and we know him  
6 well.

7 COMMISSIONER DALTON: This question is for the  
8 other -- Ms. Garcia. By the way, to preface the question  
9 --

10 CHAIRMAN OSBORN: The preamble.

11 COMMISSIONER DALTON: The preamble is I like  
12 your preamble that is putting the question of  
13 undocumented workers in the sort of broader context of  
14 undocumented workers throughout the history of this  
15 country. And that's really quite useful for people to  
16 hear.

17 My question had to do with the immigration so-  
18 called reform act -- the IRCA Act. You indicated that it  
19 provided money to governmental entities to provide health  
20 care to those who took advantage of amnesty. But that  
21 the money -- by and large, that program had not been  
22 successful because people were afraid to take advantage  
23 of it.

24 What has happened to that -- to those funds?

25 MS. B. GARCIA: Let me just say that the way

1 that the IRCA program was administered was the fact that  
2 it was given to mostly state -- it was given to the  
3 states. Then it was also given to county entities. And  
4 then a trickle down effect to the community based  
5 organizations.

6 And what happened was that -- for instance,  
7 four years after the program, we just barely got outreach  
8 money. So we were not in -- we were not given any type  
9 of money to be able to go out and do the outreach to  
10 bring people in.

11 There was a lot of misinformation, even to the  
12 legal aid societies and there was a lot of confusion  
13 through the process to when was somebody ineligible  
14 because they became a public charge? They finally, three  
15 years later into the program, distinguished it between  
16 money in hand -- say they were not eligible for AFDC,  
17 food stamps -- but they were eligible to go to a  
18 community clinic or to a county. And the counties and  
19 the community clinics would be reimbursed for providing  
20 services to them.

21 But there was a lot of fear in that population  
22 and a lot of misinformation given to that population that  
23 they were not to go to any type of government agency and  
24 ask for any type of assistance. So that a program now  
25 going -- is going to be sunseting in '92 leaves many

1 people with no -- thinking that they have no ability to  
2 access any type of assistance.

3 The money was really a stop gap measure between  
4 the time they came into the program and the time they  
5 would become legalized. And I am afraid to say that it  
6 was severely mismanaged by the federal government.

7 MR. MARTINEZ: In the State of Washington, we  
8 had a -- a similar situation. The money was coming into  
9 the state to community colleges. Why the community  
10 colleges still -- but that was the system that they used  
11 for the distribution of funds and resources.

12 Today, the State of Washington doesn't have a  
13 plan. It doesn't have a plan for distributing those  
14 resources. So -- so it keeps them. And we have met with  
15 them; we have pushed them; we have coerced them. And  
16 they're saying that we're not sure that if we do this the  
17 Feds are going to come down on us. We're not sure that  
18 the kind of plan that needs to be -- you know, put out in  
19 the state so we continue to wait.

20 MS. B. GARCIA: Just one other point on that  
21 was that through the amnesty program, you're required to  
22 have an HIV test. And that was another issue for many  
23 people. Today, there are over 100 cases in Los Angeles  
24 that are still have -- people do not know whether they're  
25 going to be deported or continue to be able to stay in

1 the country due to the HIV positivity that came out of  
2 that test.

3 So you can imagine, word gets out like that and  
4 people are not going to be coming -- rushing into our  
5 clinics to get tested, thinking that we may be reporting  
6 them to the INS. And that continues to be so. Today,  
7 undocumented people feel the same way. That we have the  
8 ability to report them to the INS by coming in for an HIV  
9 test.

10 MS. D. GARCIA: And something else that was  
11 brought up was the need to maintain a bi-national  
12 perspective on all this. And it's been pleasing to see  
13 some of the efforts that are being made around health  
14 issues.

15 But what winds up happening -- and on one of  
16 the few occasions that I got to participate -- is as they  
17 look at bi-national labor issues, people are focusing on  
18 "machilas", as if somehow agriculture has disappeared  
19 from the face of the planet. And hasn't been the major  
20 source of economic growth to basic communities along the  
21 Mexico border.

22 And I -- and my fear is that as we talk about  
23 migration and folks that are migrating, we're really just  
24 looking at those folks who stay right along the border  
25 and go back and forth, and really don't take the time to

1 look at the folks who are going to migrate all the way  
2 across the country and now are crossing paths east and  
3 west.

4           What we've heard -- and this is strictly  
5 scuttle butt -- is that folks in Florida who've been  
6 convicted of possession or intent to distribute, are  
7 being advised that if they'll go to Wisconsin, out of the  
8 eastern stream and into the midwestern stream, that  
9 they'll get off their backs. They just want you to take  
10 that problem and shift it west one stream so that they  
11 don't have to deal with you.

12           This is the kind of work that's being done to  
13 try and reduce the problems that folks are having within  
14 specific streams. And so you're going to start having  
15 cross-migration in a way that we've not considered  
16 before.

17           And what's going to happen is folks from  
18 predominantly one stream crossing into another, that it's  
19 predominantly families on the road and barely able to  
20 keep connections going anyway and really struggling to  
21 survive, are going to be faced with a whole new set of  
22 problems. That their system, as precarious as it is,  
23 isn't prepared to take.

24           COMMISSIONER ALLEN: I have one more. This is  
25 a question. Ms. Garcia, you mentioned in Dallas --

1 MS. B. GARCIA: Garcia B or Garcia D?

2 COMMISSIONER ALLEN: Contestant Number one.

3 You mentioned the -- the use of a system in Dallas when  
4 you testified?

5 MS. D. GARCIA: Right.

6 COMMISSIONER ALLEN: The use of a computer  
7 system that would follow the individual. That they could  
8 be hooked up in that kind of care and not falling through  
9 the gaps. Did you mention that this time?

10 MS. D. GARCIA: I tried to speak about it a  
11 little bit. I was trying to talk about a network of case  
12 management.

13 COMMISSIONER ALLEN: Okay. All right. And  
14 that's out of that computer -- I just wanted to put that  
15 in the record for this time because I think it's very  
16 important. And I appreciated what you had to say in  
17 Dallas and I thought about it a great deal and would like  
18 to see that implemented.

19 MS. D. GARCIA: Absolutely. If we just had a  
20 way to keep track of folks.

21 COMMISSIONER ALLEN: Right. That's all.

22 CHAIRMAN OSBORN: Now, you mentioned  
23 recommendations and you've made some, and I know we'll  
24 get to hear a little bit more from you in the final  
25 panel. Since time is pressed, if there are things that

1 you wanted to -- to make sure got said in this session,  
2 fine.

3 And otherwise, we'll try to get back to that as  
4 we -- as I think you will join us again Deliana in a few  
5 minutes after the next --

6 MS. D. GARCIA: I think that what would be  
7 important to take away specifically from this group then  
8 are the things that we've talked about in using the  
9 existent system of community based organizations, of  
10 migrant health centers, of community health centers, that  
11 they're already in place. That people already trust  
12 them. That it's a network that already works, if we  
13 could just extend it to provide case management as people  
14 move up and down the streams. And then we'll just talk  
15 broader of that.

16 But I just wanted to make sure that we focus on  
17 the fact that we don't need a -- you know, a family czar,  
18 and we don't need a new program. We just really need to  
19 maintain and enhance the existing program that people  
20 trust and that have inroads into the communities that  
21 we're trying to assist.

22 CHAIRMAN OSBORN: Thank you, very much. We  
23 really appreciate your rich testimony. And admire your  
24 work, I might add.

25 The panel-next panel will talk about policy

1 and leadership issues will join us. And after they're  
2 done, we'll have an opportunity, as I just inferred, for  
3 summary discussion with the leaders of each panel.

4 Dr. Helen Rodriguez-Trias, welcome again. And  
5 let me put the control of things in your hands. You're  
6 aware of our time constraints and our sense of regret for  
7 having such a constraint. And -- but I would ask you to  
8 have others introduce themselves. And proceed. Thank  
9 you.

10 V. POLICY and LEADERSHIP ISSUES

11 DR. HELEN RODRIGUEZ-TRIAS

12 DR. RODRIGUEZ-TRIAS: Okay. We'll do our best  
13 to be brief in the presentations because we really think  
14 that what enriches this is the exchange with you,  
15 Commissioners, but perhaps also we talked about not  
16 having the last session of the recap, but allowing that  
17 to be open to the audience.

18 And so, we'll try to make the best of time.

19 Briefly introducing myself, I'm a pediatrician.  
20 I am currently engaged as an independent consultant in  
21 health planning. My previous experience has been in  
22 primary care, the direction and the creation of programs  
23 in inner city areas for children. And, of course, that  
24 took us right into HIV when HIV came into being in those  
25 communities.

1           So that -- and my most recent full-time job was  
2 with the AIDS Institute as Medical Director in New York  
3 State. I think that experience took me into the field of  
4 policy and made me realize -- you know, that all those  
5 years, I had been a clinician in directing programs and  
6 doing all these things. I was being an agent of many  
7 policies, some of which were explicit, others which were  
8 implicit. Some of which were very understandable and  
9 some of which were extremely obscure.

10           So I am committed to the notion that we should  
11 de-mystify policies and we should de-mystify policymaking  
12 so that it can be more of a participatory process than it  
13 currently is today. Because I think that relevant  
14 policies directed to our communities can only happen in  
15 the context of the reality of those communities and your  
16 having the input from the communities.

17           Having said that, I would like to very quickly  
18 introduce my panelists here. And to say that it's been a  
19 pleasure working with them and to thank the Commission  
20 for facilitating this kind of exchange we've engaged in.

21           First of all, by Miguel Gomez enabling a very  
22 long telephone -- teleconference we had prior to coming  
23 here and our meeting last night, and our meeting again  
24 this morning. It's been very rich and I just want to  
25 thank you now.

1           The first speaker is to my right. And that is  
2 John Zamora, who is -- I'll let you introduce yourselves.  
3 I think that will make it briefer.

4           So, John, go to it. And each one in turn.

5                           JOHN ZAMORA

6           MR. ZAMORA: Okay. My name is John Zamora, and  
7 I'm the Minority Education Specialist for the State of  
8 Texas. And out of respect to you as a group and  
9 individuals, I will move quickly because I admire  
10 timeliness and move directly to the point, if this is  
11 okay with our -- okay.

12           My comments come from my experience as a  
13 project author in Texas. And what I want to first share  
14 with you are what I feel are some successes in Texas in  
15 engaging the community and responding.

16           In '90 -- in fiscal '90, we went from 21  
17 contractors in '90, to 28 contractors in fiscal '91. And  
18 I view this as a direct demonstration of our ability to  
19 engage the community in responding to the issue and in  
20 providing programming by Hispanics, directed to Hispanics  
21 and directed to gay and lesbian Hispanics.

22           Other successes that we have are  
23 supporter/mentor programs in the state, so that there's a  
24 sense of continuity. I view myself as a good example of  
25 leadership development in Texas as an HIV positive

1 individual involved in leadership roles.

2 Some needs of the Hispanic community are  
3 training and development of Hispanics, with an eye toward  
4 layering or staggering within the CBO's for a sense of  
5 continuity of presence. We invest a lot of money. There  
6 needs to be a sense of continuity. What's going to  
7 happen if some of the money is pulled out?

8 We need to designate monies for technical  
9 assistance. It's okay to make policies, but if we don't  
10 provide the funds for these agencies to be able to do  
11 networking, to do skills development or empowerment, to  
12 take a more active role, then we will have lost something  
13 there.

14 The issue of inclusion -- the need for a sense  
15 of ownership on the part of the community. A full  
16 partnership. Hispanics need to be fully involved, not  
17 just tokens. Hispanics must be involved in greater ways  
18 in planning, collection of data, analysis and  
19 implementation. So that this reinforces our recognition  
20 of leadership within the community.

21 This is also to include gay and lesbian  
22 portions of the Hispanic population. The policy coming  
23 out of this? Leadership development goals should be  
24 included in all policies affecting Hispanic communities.

25 Fully developed leadership will allow CBO's to

1 more directly and fully address issues such as  
2 bisexuality and sexually explicit materials. There is a  
3 real need to integrate bisexuality into present  
4 prevention messages and health education activities.

5 Our message is not fully effective at this  
6 time. Lack of strong leadership has prevented CBO's from  
7 discussing bisexuality and, in some instances, sexuality  
8 as a whole. Unable to overcome the stigma and unable to  
9 educate women who are at risk due to their male partners.

10 The policy implication for this related to  
11 bisexuality is anti-discriminatory legislation and  
12 education at all levels of community and government. The  
13 need to help communities and individuals come to terms  
14 with their own cultural homo-phobic beliefs.

15 The need to earmark resources -- allocations  
16 specifically towards persons engaging in behaviors which  
17 put them at risk. The need to help communities avoid  
18 labeling and judgment.

19 And, again, I apologize for reading to you, but  
20 with an eye for speed, I do it to insure inclusion.

21 On the role of private foundations -- entities  
22 such as Robert Wood Johnson and Ford have helped in  
23 enabling projects which maximize community development  
24 and participation. As they begin to withdraw their  
25 support, what or who will follow to fill the void?

1 This is a valid concern that needs to be addressed.

2 Policy recommendation is that public health  
3 entities and governmental entities must expand roles to  
4 support community development. There needs to be an  
5 emphasis placed on more flexible and relevant ways of  
6 engaging communities. Ways of engaging communities in  
7 program developments and implementation.

8 Something else I see as related to the support  
9 of leadership is recognition of main Hispanic  
10 populations. As pointed out earlier, the term Hispanic  
11 is not a monolith. There is -- it is made up of  
12 components. And I see a need for the recognition of  
13 these main Hispanic populations to monitor funding  
14 activities, cultural issues and dissemination of  
15 information.

16 Issues have been brought up about language.  
17 What one word means to one group may not mean the same to  
18 another. The need to insure the policy is developed --  
19 that policies developed reflects the recognition of major  
20 Hispanic populations to insure successful intervention,  
21 materials, policies and practices. As has been cited,  
22 the Spanish version of the American response to AIDS is a  
23 good example.

24 And I think that's my five minutes.

25 DR. RODRIGUEZ-TRIAS: Thank you, very much for

1 keeping to your -- to your time. We really will open up.  
2 We have many issues that we want to bring forth which  
3 will come.

4 MIGUEL GOMEZ

5 MR. GOMEZ: My name is Miguel Gomez and I work  
6 in Washington at the National Council of La Raza. And I  
7 know many of you, which I think is -- gives me an  
8 advantage because I know that you are good folks and work  
9 very hard. And I laud you for still being awake right  
10 now. It's been a hard, long day already for you.

11 But what I do primarily is I work with Hispanic  
12 community based groups throughout the country, over 100  
13 of them. But, in reality, I only work closely with 20 of  
14 those organizations helping them augment their programs.

15 And by virtue of being in Washington, I advise  
16 a lot of the public health agencies about how to reach  
17 and educate the Hispanic community. And one of the  
18 things that I think is real, real important by virtue of  
19 my experience is that the Commission, regardless of the  
20 fact that you're here til 12 or 1, or you're here til 5,  
21 is that you have a gift.

22 You have learned about the Hispanic community.

23 Not only here in Chicago yesterday, but weeks ago in  
24 Miami, weeks ago in Puerto Rico, New Jersey, etc. You  
25 started off in California learning about the Hispanic

1 community.

2           And of the things that's real important to me  
3 seeing the groups is they value what you have learned.  
4 And my first recommendation, is that you take the  
5 information that you have learned in your observations  
6 about our communities back to our communities. Not just  
7 to the -- not just to member of Congress and the  
8 administration who you have an obligation to report to.

9           And that is the first recommendation.

10           And have recognized your commitment to the  
11 Hispanic community. I know Commissioner Kessler has made  
12 sure in Boston that community research and institutes  
13 targeting the Hispanic community have worked.  
14 Commissioner Osborn, years ago, made sure that dollars  
15 were coming to the Hispanic communities through federal  
16 legislation.

17           But when you think about the Hispanic  
18 community, think about what we talked about today. And  
19 it's important to me -- for you to think about the  
20 Hispanic community, not just what you saw in those  
21 various pockets. But who is able to serve and reach that  
22 community.

23           The ones have been told to you before have been  
24 around for thirty plus years. But they've been  
25 responding to the epidemic for about three years. And

1 this is leading to recommendation number two.

2           These entities who are part of programs -- part  
3 of a larger group, are just beginning to respond. Year  
4 three -- they've already had staff turnover. But they've  
5 also had to learn some important things. And that is  
6 that they have to diversify their funding base. And they  
7 have to learn about the epidemic.

8           They have to learn about the sexual health  
9 behaviors of our community. They have to learn about men  
10 who are having sex with other men. The fact that there  
11 is women to women sex. And there's no place to record  
12 that. They have to learn about the issues of incest.  
13 And for them, we don't have a hard to reach population -  
14 - real important.

15           We know how to reach that community because we  
16 have their trust and we're in their community. And these  
17 programs, which leads me to recommendation number two,  
18 need to be supported in the future, which means more  
19 dollars. When you hear from folks in Washington saying  
20 more dollars, direct it to those who can reach and  
21 educate a target community.

22           It has -- for our community -- augmented,  
23 meaning Hispanic focused or Hispanic run community based  
24 organizations. If they have the ability and trust in the  
25 community. In our community, we don't have traditional

1 colleges and universities. We don't have a number of  
2 elected and appointed officials.

3 And the one thing that's really good to see  
4 around the country is our groups are starting to become  
5 involved in the policy and leadership positions. In  
6 Title 1 of Ryan White, it was real exciting in seeing in  
7 most of the 16 cities seeing our groups at the table.  
8 However, there are demands for continued funding.

9 The fact that they don't have time and money to  
10 be able to do policy work, networking -- means that when  
11 funds go to these community based groups, funds have to  
12 allow time for networking and technical assistance to run  
13 these programs.

14 I just had three groups that ran -- called me  
15 within the last two weeks to tell me that they were going  
16 to go out of business -- their programs. And I said,  
17 well, maybe it's not a good idea. And the reason why is  
18 that they didn't know how to diversify their funding  
19 base; they didn't know how to evaluate; they didn't know  
20 how to work with their funder.

21 And these were groups that were working in a  
22 midwest group that was in schools during -- during a week  
23 -- over 50 times a week in the schools.

24 America, who was quite boisterous this morning,  
25 is a model program for us. She told you that she had to

1 lay off one of her few outreach workers. And she's a  
2 model for the Hispanic community because she also -- her  
3 group understands the link between learning about the  
4 link between substance abuse and HIV.

5 But, going back to Ryan White, we've been able  
6 to be in the Title 1 planning councils. But we haven't  
7 had the time. So we're building -- when giving dollars  
8 to those groups, building the time necessary to network  
9 is real important.

10 In addition, is that when Title 2 and Title 3  
11 move forward, making sure that not just the Hispanic  
12 community, but all communities know what is happening  
13 with that. And I know that through your talks and  
14 through your positions that as we move through  
15 implementing Ryan White can make sure that the  
16 information distribution is happening so there is full  
17 involvement.

18 And lastly, just for you to pose the question.  
19 We talked all day about the strength of our community and  
20 the ability to reach. But in the future funding, it's  
21 going to be categorical block grants. Where is the  
22 Hispanic community going to fit in there? Lots of  
23 questions. Good luck.

24 Thank you.

25 MIGUELINA MALDINADO

1 MS. MALDONADO: My name is Miguelina  
2 Maldonado. I'm the Executive Director of the Hispanic  
3 AIDS Forum in New York City. Our organization was  
4 established in 1985 and was the first Latino based  
5 community organization solely addressing the impact of  
6 AIDS in the Latino community.

7 What I'd like to do is to address some issues  
8 specifically related to -- to Latinos and AIDS. Some of  
9 these issues are specific to all women, yet I'd like to  
10 highlight how the issues are of importance to Latino  
11 women because of what you've heard this morning and this  
12 afternoon regarding the socio-economic, the health status  
13 of Latino women.

14 And also the lack of access to care. I think  
15 that a lot of the issues become more pronounced within  
16 Latino women because of this.

17 First, in relation to prevention education, you  
18 -- you had a panel very well identify what needs to be  
19 done. I think added to that, we need to begin to  
20 integrate into prevention education efforts when we're  
21 focusing on women. Also focusing on the fact that when  
22 we're talking about hetero-sexually transmitted AIDS that  
23 -- that women do not necessarily have power to control  
24 sexual relationships. And that the programs have to also  
25 focus on empowerment issues that -- and behavioral change

1 issues that will take time over the long course of time.

2 So that funding for prevention education cannot  
3 be seen as short term. Because we're talking about  
4 changing behaviors. And we're also talking about  
5 changing attitudes and conditions that place women in  
6 less than equal position to men that will take a long  
7 period of time to change.

8 So that we have to have more intensive, long  
9 term prevention education dollars. It can't be dollars  
10 that are allocated for one or two years and then the  
11 programs are cut. And the dollars are located elsewhere.  
12 And I think that's very key.

13 In addition to that, the programs have to focus  
14 on the range of sexuality. As John related, we have to  
15 look at women who are lesbians. And I think that there  
16 has been an absence of focus on lesbians because of the  
17 entrenched homophobia in our community. But also because  
18 there's been a lack of recognition that lesbians are --  
19 can be at risk of HIV infection. In fact, many lesbians  
20 are HIV infected.

21 And they are categorized in different groups  
22 because there's a lack of attention to lesbians period.  
23 Lesbians are also mothers. They have children and  
24 they're part of families. So I think that it's important  
25 to -- to focus on including the range of sexuality,

1 particularly for women.

2           The other issue is bi-sexuality within our  
3 community. And the issues related to the hidden bi-  
4 sexuality within our community and the need to target  
5 that more effectively and to raise consciousness more  
6 effectively regarding bi-sexuality within our community.  
7 Because many, many women are becoming infected. Not  
8 because they are IV drug users themselves, but because  
9 they have sexual partners who are not IV drug users  
10 either, but are bi-sexual. And they don't even know  
11 that. And I think that that's a key.

12           And the -- the -- there's an underreporting in  
13 that category. And I think we need to look at that more  
14 effectively for all women, but also in the case of  
15 Latinos where we know that bi-sexuality exists. We don't  
16 talk about it, but it exists within our community.

17           One of the other issues that I think is  
18 important in terms of access to care, and it's been said  
19 time and time again, is that Latinos as a group have less  
20 access to primary care than other women period. We can  
21 look at the little, no or late prenatal care. The high  
22 instance of low birth weight babies, the high incidence  
23 of infant mortality and also maternal mortality that  
24 point to a lack of care prior to giving birth.

25           And, in many instances, the focus has been on

1 getting mothers who become pregnant into care. I think  
2 we need to focus also on getting women period into  
3 primary care. And the health of women in and of herself  
4 as a woman needs to be focused on more.

5 And, as you've heard -- you know, the role of a  
6 family is very important in our culture. And I think  
7 that we also have to see that the role of the woman is  
8 very important in our culture and is a centerpiece to the  
9 family. And if the woman is not healthy, and we know  
10 that women -- the primary care givers for people who are  
11 HIV infected in families where there's more than one  
12 person infected. And very often, the woman who is HIV  
13 infected herself is the one that's caring for the others  
14 as well.

15 So that we need to focus on the woman's health  
16 as well as the health of the family as a whole. And  
17 access to care is key. It has -- care has to be provided  
18 within the context of community based clinics in places  
19 that are accessible to women. And there has to be a  
20 revisiting of public health models that have worked in  
21 the past where people visit homes. All right -- to teach  
22 people how to take care of themselves and where there's a  
23 real ongoing connection with people in the homes and in  
24 the communities, rather than having people always go to  
25 very far large medical centers for treatment.

1           And I think that we have to take a look at how  
2 health care is organized and also how the organization of  
3 health care is a barrier to access. And look towards  
4 what Emillio Carrillo and Nilsa Guiterrez talked about in  
5 terms of community based primary care and community  
6 based, neighborhood based care for people, rather than  
7 hospital based care.

8           Clinical trials and the access to clinical  
9 trials is a critical issue for women period. For  
10 Latinos, it's more critical. The Latino community as a  
11 whole has had very little participation in clinical  
12 trials and has been excluded from clinical trials for a  
13 variety of exclusion criteria of the actual trials.

14           In addition to that, the location of clinical  
15 trials in large university and medical centers, I think,  
16 also places a large barrier on access to trials. And one  
17 of the recommendations that I would make is that there be  
18 more -- an expansion of the movement to clinical trials  
19 in communities. That Latino physicians who are providing  
20 primary care be recruited and trained to become involved  
21 in clinical trials.

22           And that clinical trials be attached to care,  
23 treatment and services for people. People who have lack  
24 of access to services are not likely to engage in a  
25 clinical trial where the likely benefit of the trial for

1 them is far fetched. So that there has to be outreach  
2 that's aggressive.

3 There also has to be a movement of trials into  
4 the communities using community physicians. And there  
5 has to be a connection of trials to comprehensive  
6 treatment in order for them to be more accessible to our  
7 people, and particularly our women.

8 Another issue that I think is very important in  
9 terms of women is the issue of reproductive choice. And  
10 a lot of programs and a lot of studies that have been  
11 done regarding reproductive choice have indicated that  
12 women who are HIV infected may very -- and are pregnant --  
13 -- may very often choose to carry pregnancy to term and  
14 have the child.

15 And one of the issues that I think is of  
16 concern is the trend among health care professionals to  
17 view that in a negative way and not to accept the woman's  
18 right to reproductive choice.

19 I think that coercive types of -- and covert  
20 types of counseling programs where the bias of the  
21 provider is clearly towards termination of pregnancy has  
22 to be looked at. That there has to be a way of  
23 monitoring for that so that women have actual right to  
24 reproductive choice.

25 And women -- Latino women are concentrated in

1 the reproductive ages. They have high fertility rates  
2 and they will continue to have high fertility rates. And  
3 the cultural emphasis on children and on family is very  
4 strong. And I think that there is at times this  
5 continuity between those cultural elements and the public  
6 health goes.

7 And that needs to be looked at from a positive  
8 point of view. And the insurance of actual reproductive  
9 choice has to be integrated into programs. And that may  
10 take some retraining of physicians and health care  
11 providers, as well as really providing women with the  
12 tools to be able to make the choices themselves and not  
13 to be coerced within a system where they feel that the  
14 push is towards one choice, as opposed to another.

15 Finally, I'd just like to highlight that of  
16 particular concern is the possibility of criminalizing  
17 HIV transmission and as it relates to women in terms of  
18 prenatal transmission. In some states, for example,  
19 we've seen that where there has been a focus on  
20 criminalizing mothers who use drugs. And we may see  
21 extending of the same trends.

22 And I think it's incumbent on this Commission  
23 to really guard against that. Women will not go forward  
24 to be tested. Women will not go forward to get primary  
25 health care if they feel that they're going to be

1 identified if they're HIV positive as possibly  
2 transmitting HIV to their children -- their unborn  
3 children, and then lose their children.

4 So I think that that's a real important issue.  
5 From a policy perspective, that has to be looked at  
6 carefully. And there's already precedent for some of the  
7 criminalization in some states. And as a national  
8 commission, I think that there has to be a strong  
9 position against that.

10 I'll stop there.

11 DR. ALBERTO MATA

12 DR. MATA: I'll keep mine even briefer. And  
13 I'd like to address two particular issues. The meaning  
14 of HIV, particularly as it impacts on the Hispanic  
15 community, will rest on us getting rid of a notion that  
16 there is a single source or a silver bullet that's going  
17 to take care of this problem.

18 I have yet to see a community or a group or a  
19 state or a commission that doesn't take on that  
20 singlemindedness and -- somehow, we need to think in  
21 terms of a long term campaign.

22 Drug addiction is a life long problem that is  
23 at once chronic and acute as we start to look at the  
24 impact that crack cocaine is having in our community.

25 Second, HIV parallels that very much. The

1 second thing that I think is very, very important that we  
2 need to do is that the world is getting much, much more  
3 complex. And every time I hear of instant solutions,  
4 silver colored condoms, a particular case management  
5 system, empowerment. If I hear cliches like that anymore  
6 -- it takes away from some meaningful approaches that  
7 people who have really struggled with this issue.

8 I remember Don De Jarlais back in 1986 talking  
9 about going out to talk to addicts and pass out these  
10 little damn cards. And I looked at him and I said, you  
11 must be crazy.

12 Eunice Garcia raising this issue with National  
13 Council De La Raza before 1,500 other folks.

14 A friend of mine named George Beshner who put  
15 together programs that are now in 64 cities across the  
16 United States that have moved the AIDS agenda, not as an  
17 AIDS problem stigmatized folks, but as a public health  
18 model and concern.

19 The last issue that I think that is very  
20 important is that you as a national commission play a  
21 very, very important role. Many of the issues that are  
22 here would not be taken on anywhere else, regardless of  
23 how well some of our governors are, some of our mayors  
24 are, some of our public health officials.

25 We need a national forum. And a national forum

1 means a national partnership. A national partnership  
2 with a private and public arena. If you look today,  
3 we're going -- we're seeing the foundations move away  
4 from this issue. We're seeing the United Way being  
5 overtaxed with a lot of the systems. A lot of the  
6 demands that are being placed on them.

7           And so the role that you could play for us is  
8 very, very important. One is give voice and keep the  
9 dialogue going because I don't think that there will be  
10 any special solutions that will come out of this meeting  
11 or the other ones. But a series of trained, reasoned,  
12 balanced judgments that our communities can, in the long  
13 run, benefit from.

14           We need to have some balanced discussions.  
15 Each time, I don't care whether it's the issue of needle  
16 exchange or condoms in the school or go turn the Catholic  
17 church on its head -- those are not solutions. We need  
18 balanced discussions in our communities because what  
19 works in one community will not work in the other  
20 community.

21           And irregardless of you -- of us finding a  
22 particular model, these folks have to take it on as their  
23 own. And they will take it on their own when particular  
24 leaders in the community adopt it. And they allow for  
25 some type of discussion in these communities.

1           They will come up with answers that many of us  
2 will not agree upon. That's tough -- you know, we're  
3 going to have to live with these communities as they  
4 struggle to get an identity and to fend for themselves.

5           So the last thing that I'd like to recommend is  
6 at some point, this dialogue continue with the black,  
7 Hispanic, gay community, with our professional  
8 community -- that somehow assesses what we have done in  
9 the past. There are some hellacious plans that -- I was  
10 just discussing with Don -- I doubt that we've had time  
11 to really think about a number of these issues.

12           We've had a full meeting. We've seen the  
13 foundations have meetings. We've had Latino this and  
14 that. But to really take ourselves back and look at what  
15 some of those solutions that we recommended. And some of  
16 the recommendations, we'd probably go, I didn't say that.  
17 And another one, Jesus Christ, I said that. When am I  
18 going to do it?

19           And so, there has got to be a place for us  
20 where we build on past the current and begin to address  
21 the future problems that are going to be facing our  
22 communities. And they're not just going to come from  
23 federal legislation and programs. They're not just going  
24 to come from mandates.

25           They're going to come from looking at that

1 private sector arena. They're going to be looking from  
2 how do we somehow figure out a way to bring back those  
3 foundations? How do we wind up finding the United Way to  
4 make meaningful incursions in communities where they have  
5 not?

6 There have been places where they have. How do  
7 those solutions get diffused and disseminated to those  
8 Hispanic communities, those black communities, those poor  
9 white communities? All you have to do is go to West  
10 Virginia where they're just -- they're needed there just  
11 as anywhere else.

12 So what I had wanted to recommend is if you can  
13 find models of cooperation and collaboration on research  
14 and service and policy making, then please highlight  
15 those and share them back with the community.

16 I think the dialogue, particularly in a  
17 democratic society, are very important. Many of the  
18 problems that are going to come are going to be very,  
19 very difficult down the road for people are going to be  
20 making choices between different health policy and  
21 different health concerns.

22 And those aren't numbers. Those are going to  
23 be individuals. Those are going to be people who have  
24 particular health conditions. And we're going to have to  
25 make choices.

1           The second thing is federalism. I've been --  
2           in my real life, I am a field worker. I'm not a  
3           bureaucrat. Okay? And I've had to learn the ABC's and  
4           you almost need a Ph.D. to figure that out.

5           But the new federalism -- that's what we have.  
6           We have a state, we have a federal and we have a private  
7           arena. And if you're going to be effective in that  
8           arena, you're going to have to learn that we need to  
9           figure out a way to get those models out and those  
10          informations and those internships.

11          20 years ago, at the University of Michigan, I  
12          discovered 75 Latinos who happened to be Hispanic, Puerto  
13          Ricans and Cubans. They were here in northwestern; they  
14          were here in Chicago. If I go back to those same  
15          schools, those folks are not there.

16          They cannot be providing the services to our  
17          folks if they're not there. A recent chronicle for  
18          higher education report came out. 80% of the Hispanic  
19          women who started Ph.D. programs did not complete those  
20          programs. Okay?

21          There -- it's something -- I can't recommend to  
22          Mr. Allen or to Mr. Mason, folks whom I don't have yet.  
23          Now, I can tell you that I still have a list of folks  
24          that I will always recommend. But we need to somehow get  
25          into a partnership that allows us to create the next

1 generation of MPH's, M.D.'s, nutritionists.

2 By the way, I have lost 32 pounds and I have  
3 gotten into a program of weight management and behavior  
4 control. And it is not unlike many of the other  
5 programs. There is no simple solution to this thing.  
6 It's going to be a lifelong condition.

7 And somehow, we need to get messages about how  
8 successful behavior change occurs. Brown ones, black  
9 ones and white ones that's put in people terms. And  
10 that's going to come when we train community based  
11 intervention. That's going to come when we train  
12 commission corps officers. That's going to come when  
13 these people go back to Aetna Insurance and become the  
14 voices and the links to these.

15 The last, we need to still come up with  
16 innovative ideas. Five or six years ago, we flew up all  
17 kinds of trial balloons and everybody now takes them as  
18 their own. But we need some new trial balloons. And  
19 they may mean -- for Hispanics, you've heard today a  
20 large -- about the lack of insurance, but there's a large  
21 number of them who are in the work force, in sheltered  
22 employment. And we need to get the AIDS and drug abuse  
23 messages through EAP programs to them.

24 And it cannot just be the federal government  
25 doing it. It's got to be the state; it's got to be the

1 private partnership. And so to return, your role for us  
2 is to continue to voice some of those concerns. And I  
3 really do applaud the Commission in terms of the reports  
4 that you have put out. Please continue to do that.

5 In terms of balance, the issues have got to be  
6 put on the table and the American public has to discuss  
7 them. I don't care whether it's health education,  
8 sexuality, drug abuse treatment, treatment on demand.  
9 Those are issues that the American public needs to  
10 discuss at some point and you folks may be one of those  
11 forums.

12 And the last -- at some point, for yourselves,  
13 if you have time -- which most of us don't -- a retreat  
14 that gives us a plan that says what we have done in the  
15 past. What we are doing currently. And allows us to  
16 address some of these future issues in a way that gives  
17 us options.

18 And the options aren't just for congressional  
19 folks. There are communities -- there are people in  
20 these communities that need to know that we are working  
21 and things are being successfully done in their  
22 communities.

23 So if you find these diamonds in the rough  
24 through your hearings, please, get them back to people.

25 Thank you, very much.

1 DR. RODRIGUEZ-TRIAS: Thank you, very much. I  
2 would just to highlight maybe just two issues that are  
3 sort of near and dear to me.

4 One is -- was raised by Miguel is getting the  
5 information that you gather back to where you gathered it  
6 -- the community. I have, in working on the draft report  
7 for the Commission on the hearings in Puerto Rico, I have  
8 come across a tremendous -- a tremendous richness of hope  
9 that people have that they were heard.

10 And I think what you can do for people is to  
11 insure that you are saying to them, not only were you  
12 heard, others can hear you and you can use your  
13 participation in a way that serves as a tool in your  
14 struggle against this epidemic.

15 I really feel very strongly about that as a  
16 commitment for the Commission.

17 In that area, too, of sort of feedback, I think  
18 in research policy, many of you are researchers and many  
19 of you are attached to schools of public health. And  
20 many of you are on review committees and have the  
21 opportunity to guide research.

22 That, again, there's a common feeling out there  
23 in communities that they are somehow being robbed when  
24 research is being done because the results of this don't  
25 necessarily come back to them in ways that they can use

1 in pushing for programs and specific -- you know, for  
2 their own use as they may set priorities.

3 So that I think this is also a very important  
4 part of commitment.

5 And my last point is in relation to leadership  
6 development. And I note that -- you know, the panel has  
7 had much more to say about that. But that I really  
8 because I guess my experience in New York State taught me  
9 the following. That although it was AIDS that made it  
10 happen, the fact that it happened was impacting on other  
11 things. And that was this participatory process that I  
12 mentioned before.

13 For example, great concern about the high sero  
14 prevalence in the blind study in the hospitals -- you  
15 know, in New York State. How to get that information  
16 back.

17 A committee was created to look at policy and  
18 it was just fascinating for me because as an educator,  
19 I'm committed to the notion that people do grow and  
20 learn. That to see epidemiologist who had not been out  
21 of their labs for a long time really become interested in  
22 going into the delivery services at Harlem, at King's  
23 County to say, well, how do we get this information back  
24 to people in a way that's going to result in counseling  
25 in that setting?

1           And maybe coming back to the committee meetings  
2 and saying, hey, it was impossible. There's nobody who  
3 can talk to anybody there because that's in and out with  
4 the number of deliveries they have. And maybe that's not  
5 the appropriate setting in which to place this  
6 counseling.

7           Hey -- touch or feel -- a touch of reality. A  
8 touch of learning how to make policies that really are  
9 going to work and are going to implement programs that  
10 really are going to work because they have talked to the  
11 people in the field.

12           So that kind of input -- it's happened as a  
13 result of AIDS, I'd say. But it has had an impact on the  
14 way people think, in the way they participate at the  
15 state decision making level in New York and in other  
16 programs.

17           So I will put before you -- you know, can the  
18 Commission become very committed to this kind of  
19 approach?

20           MS. MALDONADO: I'd just like to raise one  
21 other issue and I think you've heard it before. When the  
22 other panelists talked about migration and other  
23 panelists talked about the average between Puerto Rico,  
24 the northeast to midwest. I think that we need to really  
25 take a look at the federal policies regarding Puerto

1 Rico. Particularly in terms of limitations and Medicaid  
2 funding.

3 And that if we're really truly addressing the  
4 needs of Hispanics, we also have to consider that beyond  
5 the fact that Puerto Ricans who are Puerto Ricans in  
6 Puerto Rico come to the northeast and to other areas.  
7 And they have an impact. And they come for care and  
8 services. That they're also citizens of the United  
9 States and then in the same way that they can go to war,  
10 that we need greater access to care and treatment on our  
11 own island.

12 And that this Commission really has to put that  
13 forward in a very strong way to the federal government.

14 CHAIRMAN OSBORN: We are so badly out of time  
15 that I'm a little nonplussed. But I want to make sure  
16 that we have at least a little bit of chance to  
17 interchange with this very important group of witnesses.

18 Harlon, I know you had a quick one and Don  
19 Goldman.

20 COMMISSIONER DALTON: Well, this time I won't  
21 pretend to ask a question. I just wanted to -- to  
22 reflect back again a little bit of what at least I have  
23 heard. Because I was struck by the connections between  
24 what this policy panel has had to say and what the  
25 earlier panels have had to say and it's no surprise.

1 Miguel, I was glad that you just put  
2 exclusively on the table who is able to reach and serve  
3 Latino communities the best. Because I think that was  
4 really the hidden message of the first panel on  
5 prevention.

6 I mean, they never quite closed the loop and  
7 said -- you know, rather than trying to train Harlon  
8 Dalton or Irwin Pernick to be culturally appropriate, let  
9 alone culturally competent, there are people out there  
10 who've got these skills. And those are the folks who  
11 ought to be doing the job.

12 And it's often hard for people to say that  
13 because it sounds self-serving. It sounds like give me  
14 some more money. And Lord knows, we've heard more people  
15 say, give me more money. And sometimes, the person  
16 asking that is the executive director who either appears  
17 to be out of touch with his or her own community or is  
18 just simply showing this group that they know how to use  
19 the right fork.

20 And so we see the anglo side or their white  
21 side. And, in fact, they are perfectly culturally  
22 literate in their own communities. But there's this  
23 funny kind of sense of disjunction.

24 So I'm glad explicitly that that message was  
25 there. That there are people already who can knock on

1 the door and somebody will say, come in. And that's the  
2 test of who can provide prevention and education  
3 services.

4 Secondly, there was a strong message from this  
5 panel and earlier in the day about the need to be engaged  
6 in a long term campaign. Not simply in terms of  
7 treatment and care where it's fairly obvious. But in  
8 terms of prevention as well.

9 As America Bracho said earlier, I mean, part of  
10 the point of treatment is to engage in an ongoing process  
11 of helping communities change in ways that foster  
12 behavior change and helping individuals and families find  
13 out what, for them, will result in sustained behavior  
14 change.

15 Miguelina and this panel pointed out  
16 specifically with respect to women, that part of what  
17 we're talking about with respect to prevention is helping  
18 to empower -- sorry about that word -- women to take a  
19 measure of control -- exercise a measure of control over  
20 their own sort of bodies and sexual lives. And that, in  
21 fact, is part of an ongoing interactive effort.

22 And what we've heard from people is a sense of  
23 frustration that prevention dollars may be fleeting.  
24 People feel, well, we've done that. And, in fact, it's  
25 not a one shot or two shot deal, especially for

1 communities that have gotten into the game three years  
2 ago, as is often the case with Latinos and blacks.

3 And finally, from this panel, from a couple of  
4 people and from some earlier people, we've heard about  
5 the need to kind of focus on a range of sexualities, to  
6 use Miguelina's phrase. And sort of between the lines,  
7 we've got a sense of some of the complexities of doing  
8 that.

9 The categories sometimes get in the way.  
10 Several folks have said, for example, gay man -- that  
11 phrase doesn't really capture the way people self-  
12 identify. And we've certainly heard that before.

13 But also when Miguelina talked about lesbians  
14 and the need to sort of focus on transmission among  
15 lesbians. And we don't often hear the "L" word; you're  
16 right. It's for some complicated reasons. In part,  
17 because early on in this epidemic, the organized lesbian  
18 community felt quite appropriately that since as a group,  
19 they were among the group least at risk, to somehow be  
20 assumed to be at risk because they had the same sex  
21 orientation was doing them a disservice.

22 But with respect to lesbians, you have to ask  
23 the question not whether there is a label, but what do  
24 people do? That is -- a woman who has sex with women can  
25 also have sex with men and be at risk by virtue of that.

1 Or by virtue of drug use.

2 But she's also in the position of transmitting  
3 the virus to other women. So, again, the focus has to be  
4 on what do people actually do?

5 And, now just tying it back to the first point.  
6 Who can sort of ask these questions? Who can talk about  
7 sexual behavior? We've heard several people say the idea  
8 of the Latinos can't talk about sex or don't is a myth.  
9 But the question is how and where and under what  
10 circumstances do you talk about sex? And that gets us  
11 back to who can best do the job -- Miguel's point. I  
12 mean, who knows how to sort of talk about sex -- not only  
13 sex but the varieties of sex.

14 And we really do need to go to those folks who  
15 have been for 20, 30 years working in their communities -  
16 - not on AIDS -- have now added AIDS to their set of  
17 concerns.

18 In some ways, we're still learning the epidemic  
19 and we have to recognize that. And sometimes we'll come  
20 up with solutions we don't -- whoever we are -- don't  
21 recognize or maybe don't like. That's just part of the  
22 game.

23 Anyway, I just wanted to sort of feed back what  
24 -- at least I hear to be a somewhat consistent message  
25 across the panel.

1 CHAIRMAN OSBORN: Don, quickly. We are really  
2 very far behind. And we have some other things we need  
3 to do before we break.

4 COMMISSIONER GOLDMAN: I have two quick  
5 questions. One of them is that I was just curious. Dr.  
6 Gutierrez, in her earlier panel, suggested that  
7 categorical funding does not work for the Latino  
8 community.

9 And, yet, I think Miguel indicated that the  
10 reality is that's where funding is. And I'm wondering  
11 whether or not the suggestion is a categorical funding is  
12 not appropriately used in the Latino community and how  
13 you deal with the issue if categorical funding is where  
14 things are and categorical funding doesn't work for the  
15 Latino community, what do you do about it?

16 The second question I have is to -- why don't I  
17 just leave that one question and I'll deal with the other  
18 question on a more private basis later on.

19 MR. GOMEZ: Two points. One, I think Nilsa can  
20 also, if you are still here, respond. But what's real  
21 important is that when we're talking about funding, the  
22 recommendation put forward was direct funding as what is  
23 the AIDS community in Washington doing?

24 Two groups who can reach and educate a target  
25 population. And what is real important is that with

1 these funds, we are scared that in future funds, are not  
2 going to be -- there won't be the future of direct funded  
3 programs. We have seen them work throughout several of  
4 the CDC and the public health service programs.

5 What my call is for is a continuation of those  
6 type of programs. I'm not sure if I'm answering your  
7 question. But I think the point that has to be taken a  
8 step further is that any continued funding of programs,  
9 as Harlon pointed out, is that the groups can reach and  
10 educate, as I pointed.

11 But my concern is their continued survival.  
12 And not downsizing -- survival. And so they just don't  
13 need funding. They need technical assistance to be able  
14 to network, to do policy work and to work with others in  
15 their community and to build their programs.

16 DR. MATA: Let me give you a sharper answer,  
17 too, in terms of in some states, the monies will come  
18 down the HIV testing and counseling and in some lines,  
19 they'll come down to drug abuse. And in some lines,  
20 they'll come down the HERSA track.

21 And the problem with that is that we have well  
22 meaning programs, but in some communities, until a Fed  
23 shows up or a commission shows up, these folks have not  
24 talked to each other. And in other areas, they have  
25 begun to put it together.

.1           And even where they have begun to put it  
2 together -- an example is Miami. Miami, we have a case  
3 management program with the South Florida AIDS network  
4 and the with the drug abuse community. One AIDS case  
5 management case to walk through the system takes three  
6 weeks.

7           And then, that person's HIV status and health  
8 status is going to change. Entering that data, following  
9 that person, becomes a responsibility and can overwhelm  
10 systems that have just begun to talk to each other. So  
11 the categorical grant not that they're working in some  
12 areas and not working in others. And that's what has to  
13 be discussed.

14           That's when we say partnership and  
15 collaboration is very, very important. And when we piece  
16 these things together, the cliches make things sound  
17 right, but when you look to see what's operating and how  
18 to make them operate, that's another.

19           And that's why I keep saying we need to  
20 highlight those examples where they are working because  
21 we need some more success and a can do attitude in this  
22 area.

23           MR. GOMEZ: And I think another important  
24 example is what's happening with the Ryan White Care Act  
25 and participation and is the money going to reach the

1 populations that the legislation targeted?

2 DR. RODRIGUEZ-TRIAS: Yeah. I think another  
3 issue and I don't know how to tackle it at the federal  
4 level, but it which certainly does not fit into the HIV  
5 model because, you know, the woman may cease to be a  
6 mother, or simply the child may be out of the program and  
7 die, and then the mother gets disqualified in terms of  
8 the services. And I think we have to make a commitment  
9 to broadening those categories that are addressed to  
10 women and children, and not necessarily to women just  
11 when they're mothers. I mean, there are programs like  
12 that, that sort of boot people out when the child dies.

13 CHAIRMAN OSBORN: Well, let me express the  
14 thanks of the Commission for your -- your input. We  
15 value it very much and feel a little frustrated when you  
16 talk about taking the message back, because we shout as  
17 loud as we know how all the time as Commissioners, and as  
18 a Commission. And it's hard.

19 We need your help in making sure that it gets  
20 back. We will continue to make reports and so forth.  
21 But I hope you recognize that we have a level of  
22 frustration too, because some of us have been shouting as  
23 loud as we know how for a long time about -- including  
24 some of these issues, and will continue to try. Thank  
25 you.

1 throughout the country, and when we talk about getting  
2 the message back, it's because you have established trust  
3 in our community. And that is a real important idea to  
4 recognize and grasp.

5 CHAIRMAN OSBORN: Thank you. That's a very  
6 kind comment, as well, and we appreciate that.

7 I knew informally that the final panel -- thank  
8 you very much to this panel, and I knew informally that  
9 the final panel had agreed to defer formal recommendation  
10 type comments, and so the staff has solicited the  
11 interest of people in speaking briefly.

12 I have five such people, three being the Amaro  
13 sisters, and I wondered if they'd like to come forward to  
14 talk to us, or however they'd like to proceed. These  
15 will be very brief inputs.

16 Then Dr. George Rivera.

17 CHAIRMAN OSBORN: -- Rivera, thank you. And  
18 Mindy Rice. So if I could have the Amaro sisters, Marta,  
19 Paula, and Brunilda. We appreciate you being with us,  
20 and I hope you understand how short the time has become,  
21 but we're very happy that you could spend a brief time  
22 with us.

23 PAULA, MARTA, and BRUNILDA AMARO

24 MS. PAULA AMARO: As you know, I am Paula.  
25 These are my two sisters, Marta and Brunilda.

1           Dr. Gutierrez, I think you had a comment you  
2 wanted to make. Perhaps you looked as though you wanted  
3 to comment and --

4           DR. GUTIERREZ: Oh, no. What do you --

5           CHAIRMAN OSBORN: Well, I'm getting a series of  
6 signals here which converge on the fact that you'd like a  
7 couple of minutes at the microphone. Why don't you say  
8 what you wanted to.

9           DR. GUTIERREZ: Simply that the panel  
10 discussion on the policy summaries. We're going to  
11 forego on that and open leave that time to the floor if  
12 there are any questions or comments, and then we can put  
13 it in writing for you. Mr. Pernick suggested that we use  
14 -- that we have some things ready for you no later than  
15 the first -- the week after Easter. A week, I believe.

16           CHAIRMAN OSBORN: Well, we will welcome your  
17 input when you get it to us. Thank you.

18           DR. GUTIERREZ: Okay. But in about three weeks  
19 or so we can get that to you. And I think that that  
20 would be better.

21           CHAIRMAN OSBORN: Good. That's very helpful.  
22 Thank you.

23           MR. GOMEZ: I know, June, you're trying to  
24 finish, but one thing I think is a real important message  
25 I want you to leave with. As you have traveled

1           CHAIRMAN OSBORN: Welcome. Thank you for  
2 coming.

3           MS. MARTA AMARO: We're open to questions.

4           CHAIRMAN OSBORN: Well, you heard some -- I  
5 don't know whether you heard the questions that Paula was  
6 asked. Perhaps you'd like to add. I think one of the  
7 better questions to focus things in such a short time is  
8 what -- we recognize that you've got serious problems  
9 with very general -- in a very general and important way.  
10 But are there specific things that would help a great  
11 deal in your present situations that you could tell us  
12 about in just a minute or so? Particularly in terms of  
13 health care, where our focus tends to be, and recognizing  
14 that the housing and employment circumstances are very  
15 difficult now.

16           COMMISSIONER DIAZ: I think another thing I  
17 would like to know, which you covered somewhat before in  
18 the video, is how you feel that education might have  
19 reached you at a very important point in your life, in  
20 terms of preventing HIV infection.

21           MS. PAULA AMARO: Well, I think that for me, it  
22 was quite an experience, because that showed the  
23 community how to accept when someone in your family is  
24 HIV or somebody has AIDS, because it would be educating  
25 people how to accept them, how to treat them and that,

1 because there are still a lot of people out there that  
2 when their family finds out, they don't want nothing to  
3 do with them anymore. "No, you're not my son, you're not  
4 my daughter."

5 See, and that movie, like each time I look at  
6 it, because we got a film for ourselves, and it would be  
7 showing us how to be more open with people. And I say  
8 that some other people, they learn from that movie not to  
9 reject the person who is infected, or whatever, because  
10 that's when they more need their families.

11 And that would help them out, because while  
12 they stand by them and help them out. They say, "Oh, so  
13 they don't reject me like I thought they were going to  
14 reject me," you know.

15 MS. MARTA AMARO: I think it was an experience  
16 for me, too, to let everybody know that like me and my  
17 sisters all are infected, you know. And it's -- we've  
18 become closer, always there for each other, my mom's  
19 always there for us, my dad, and they've been giving us a  
20 lot of support.

21 And, you know, it's an experience to show the  
22 other people how we're living, how we accepted it, and  
23 what we're doing with it. It could help other people  
24 with the same thing, their mothers, their fathers, help  
25 the children, you know, the kids that are infected, not

1 to reject them, you know. So I think just showing us  
2 three, the way we live and helping each other would help  
3 a community, too.

4 MS. BRUNILDA AMARO: Yes. Because I feel that  
5 it's bad enough that you have the -- this disease without  
6 having to be rejected by peers on top. I mean, you know,  
7 you feel like -- I just found out about seven months ago.

8 And I was very grateful for my sisters.  
9 They're there for me, and my parents.

10 And I think that the public should be more  
11 educated on how to deal with this, because it makes me  
12 think of in the times of Christ, the lepers, you know.  
13 You were just outcast, and I ran into a few people that  
14 made me feel like an outcast. When I say now I have the  
15 virus, they talk to me from a distance, they won't touch  
16 me.

17 I was even in a bar where they served me with a  
18 little cloth around the glass, and then threw the glass  
19 away when I finished. And yet, I'm going like  
20 (demonstrating). So these are ignorant people.

21 So the medical people and the community have to  
22 be educated, and make them realize that it's just like  
23 cancer or leukemia, or any other disease that you can  
24 deal with. And we're making it.

25 MS. MARTA AMARO: Hope for the best.

1 COMMISSIONER DIAZ: Are you all under treatment  
2 now?

3 THE AMARO SISTERS: Yes.

4 COMMISSIONER DIAZ: AZT?

5 THE AMARO SISTERS: Yes.

6 MS. PAULA AMARO: No, because the AZT  
7 would bring my blood count real low, and I'm anemic. So  
8 I've been two times already and had blood transfusions.  
9 So he's going to now, this month, he's going to start me  
10 in DDC.

11 COMMISSIONER DIAZ: You're all mothers?

12 THE AMARO SISTERS: Yes.

13 COMMISSIONER DALTON: I think Paula mentioned  
14 earlier that -- of having an experience, I think, with a  
15 doctor who was afraid to -- to deal with you. And I  
16 guess I want to ask of all three of you if you've had  
17 experiences of that sort with health care workers, or  
18 have things gotten better, in terms of the field level of  
19 doctors, nurses, and other people at the --

20 MS. MARTA AMARO: All three of us have the same  
21 doctors. We go to the same clinics. They know us there  
22 already. And I like to doctor we have now. He's not  
23 scared of us, he treats us like we don't have nothing.

24 MS. PAULA AMARO: He takes blood tests with no  
25 gloves.

1 MS. BRUNILDA AMARO: We miss appointments, he  
2 calls us.

3 MS. PAULA AMARO: And he explains things to me.  
4 And there are some people, like Welfare. As soon as they  
5 find out you're HIV -- they stand back, cover their  
6 mouth.

7 MS. BRUNILDA AMARO: They give you the  
8 runaround. That happened to me when I went to apply.  
9 When she learned I was HIV, she rolled her chair back to  
10 the corner and spoke to me from a distance, and kept  
11 covering her mouth and stuff when she spoke to me. And  
12 that was a frustrating experience. It's --

13 COMMISSIONER DIAZ: Where are you all getting  
14 care? Cook County?

15 MS. MARTA AMARO: University. University of  
16 Illinois Special Medicine Clinic.

17 COMMISSIONER GOLDMAN: Is your doctor Hispanic?

18 THE AMARO SISTERS: No.

19 COMMISSIONER GOLDMAN: Is that important to  
20 you?

21 THE AMARO SISTERS: No.

22 COMMISSIONER GOLDMAN: Does your doctor speak  
23 Spanish?

24 THE AMARO SISTERS: No. Yes. A little bit.

25 MS. PAULA AMARO: Sometimes when I go and I

1 start speaking to him in English and I cannot finish it,  
2 I tell him in Spanish.

3 MS. BRUNILDA AMARO: And he understands.

4 MS PAULA AMARO: And he understands.

5 MS. BRUNILDA AMARO: He speaks Spanglish.

6 (Laughter.)

7 CHAIRMAN OSBORN: Thank you very much, again.

8 THE AMARO SISTERS: Thank you.

9 CHAIRMAN OSBORN: And it's quite clear that  
10 you're helping a lot of people with the work that you do.  
11 So, thank you.

12 (Applause.)

13 GEORGE RIVERA

14 DR. RIVERA: I'm George Rivera. I'm the  
15 Director of the Charlie H Project at Our Lady of  
16 Guadalupe Church in Denver, Colorado. And we have the  
17 privilege and unique experience of working within the  
18 Catholic Church.

19 And I want to focus your attention just for a  
20 few minutes, that's why I wanted to make some remarks on  
21 the Spanish who live in non epicenter cities, because  
22 there's very, very limited resources, funds available.  
23 We're merely working through fund raisers that we do  
24 there at the Church, et cetera. And we were burying two  
25 there per month.

1           There were two Hispanics a month there who were  
2 dying -- who had died from AIDS there at Our Lady of  
3 Guadalupe Church. We found a need to form something to  
4 help the infected individual and their family. So we  
5 work with infected individuals and their families  
6 before -- before, while they're infected, and during  
7 their death, and in the aftermath of all that.

8           We deal with families because we can't deal  
9 with the individual in isolation. There's -- there are  
10 families who need help, adults who need help, even beyond  
11 the infected individual. They're trying to deal with all  
12 this in their families, there's children who need  
13 counseling and help because they're dealing with that,  
14 and they certainly need help with that even after the  
15 death of their loved ones.

16           There at Our Lady of Guadalupe Church we have a  
17 priest who is very, very supportive, and out of that  
18 we've been able to form a coalition called the Colorado  
19 Latino AIDS Community Network. And out of -- and that is  
20 coalition of the Charlie H Project, which provides  
21 spiritual and educational programs for those who are  
22 infected and for the community.

23           And Los Alamos Adios, which we had to form up  
24 then, was formed up there by Linda Mucero to help with -  
25 - as a support group for the families and children. In

1 fact, the children's group grew so large from all the  
2 extended families that we had to form a separate support  
3 group for the children that come from these families, and  
4 it's called Puzzles.

5 And we also work very, very closely with GALLA,  
6 the Gay and Lesbian Latino Alliance, which is the Latinos  
7 in the community who are -- work very, very closely with  
8 us in the Church as we try to put these programs  
9 together.

10 But I just wanted to focus your attention just  
11 for a moment on the fact that those of us who are beyond  
12 San Francisco and are not located in New York City and  
13 Miami, and some of these epicenter cities, that are needs  
14 are great, and we've had to work with institutions that  
15 already exist in order to try to meet the needs that are  
16 very, very real for us in the community.

17 So we work with families because we see the  
18 individuals embedded within the family and extended  
19 families, because extended families make up the community  
20 as a whole. And so we try to work with them in an effort  
21 to try to bring education to them, to try to bring  
22 support to them, to try to bring some show, and even  
23 economic help to them that's not gotten elsewhere. So I  
24 just wanted to bring that to your attention, if I could,  
25 please.

1 CHAIRMAN OSBORN: Thank you very much, Dr.  
2 Rivera. I appreciate you being with us. Now, Mindy  
3 Rice?

4 MINDY RICE

5 MS. RICE: My name is Mindy Rice, and I'm with  
6 Act Up Chicago, and I'm sure you've all heard several  
7 things about Act Up, probably two-thirds of them aren't  
8 true. I work with the women's caucus of Act Up Chicago,  
9 which is a group of about twenty women who work together  
10 to address issues specifically of lesbians in AIDS and  
11 women in AIDS, and are specific issues.

12 And like you said before, there have been  
13 several things thrown out, but no one's really pulled  
14 things into a circle. And I'd like to take my few  
15 minutes and talk to you about lesbians and AIDS.

16 There's an idea that lesbians and AIDS aren't  
17 at a risk for HIV infection, and it's not based on  
18 medical fact in any way, but rather on a number of deep  
19 rooted misconceptions about the way lesbians live and  
20 about how we have sex.

21 It's very difficult to talk to straight people  
22 about a lesbian culture, because there really is no way  
23 for you to have any concept of what it is like to be a  
24 lesbian, especially if you're a man. It's just one of  
25 those things that can't be done.

1           And a lesbian culture is very different from  
2 the gay male culture. The way we socialize, the way we  
3 love and the way we live are very different.

4           And just as an example of some of the  
5 misconceptions that are perpetuated through the  
6 institutions, Dr. Charles Shabel of the CDC told  
7 *Visibilities*, which is a lesbian magazine, that it isn't  
8 necessary to study lesbians because, and this is a quote,  
9 "lesbians don't have much sex." I don't know what  
10 lesbians he knows, but they aren't any that I've ever  
11 come into contact with.

12           There there are so many myths about lesbians,  
13 that we're the lowest risk group, and a lot of people  
14 when, you know, people come out with the religious  
15 standpoint that AIDS is God's wrath. I've heard the  
16 retort, well, what are lesbians, God's chosen people?  
17 And there are so many things like that that are  
18 perpetuated through the AIDS community.

19           A lot of people think that women who are self-  
20 identified lesbians don't sleep with men. It's not true.  
21 And a lot of people say -- have the impression, not in my  
22 back yard, but lesbians are already your next door  
23 neighbors, your coworkers, and your family members, and  
24 you love us already, so why can't you work for our  
25 issues.

1 I mean, the biggest problem I face in working  
2 the lesbian communities is that lesbians don't believe  
3 themselves to be at risk, because of the  
4 institutionalized disinformation. Lesbians have a viable  
5 lifestyle. There are many happy, healthy lesbians who  
6 are in love and having sex, and getting HIV and dying.

7 The current outreach programs list lesbians.  
8 We are not in the "high risk" category, unless they  
9 happen to fall into the injection drug use category or  
10 are bisexual. And we're not part of a specific  
11 community's mass target plan.

12 And Latino lesbians, especially, have a  
13 tendency to ignore their own self-identity, to sort of  
14 "grease the family gears," to make working with your  
15 parents more comfortable, a woman will ignore her own  
16 self-identity as a lesbian, and work with the family in a  
17 different context, which is -- it promotes another  
18 problem, because if you have to deny who you are to your  
19 family, how can you really get support from them? And  
20 how can you get support concerning HIV issues and things  
21 of such a serious nature?

22 And then there's the problem that there is no  
23 research done about woman to woman sex, there are no  
24 statistics. We're totally statistically invisible,  
25 because any woman who has ever had sex with a man in her

1 entire life and has contracted HIV, whether from a woman  
2 or not, it's heterosexual transmission.

3 There is no bisexual category for women, there  
4 is no combination category of injection drug use and  
5 homosexual contact, or injection drug use and bisexual  
6 contact. I mean, lesbians aren't modifying their sexual  
7 behavior.

8 It's very hard. I work -- I am the safe sex  
9 slut of Act Up. I am the one that goes out and sticks  
10 dental dams in people's faces and says "Do you know what  
11 this is?"

12 And, you know, lesbians are discriminated  
13 against in every way. And it's so hard to fight against  
14 all of that discrimination and try to inform them about  
15 the HIV issues that are a factor in their lives.

16 And lesbians do shoot drugs. Lesbians do share  
17 needles. They have been married, they do have children.  
18 They're in prison. They have sex for money, and they get  
19 raped.

20 And these are all things that seem to be  
21 invisible. And I've felt very invisible for the last  
22 couple days, and I thank you very much for letting me  
23 speak to you.

24 Are there any questions?

25 CHAIRMAN OSBORN: Mindy, I'm going to ask

1 Commissioners to ask you questions individually, if I  
2 could, because we are now almost completely out of sync,  
3 and while we're very eager to learn more from you, I  
4 think we may need to do so informally, because we have  
5 important work to do in that communication mode that was  
6 talked about earlier in the afternoon session.

7           So thank you very much. I, personally, have  
8 learned quite a lot from getting to know you the last two  
9 days, so I hope you didn't feel completely invisible.

10           MS. RICE: Included in all of your information  
11 packages is an excerpt from this book, Women, AIDS and  
12 Activism. It was published by the active New York Women  
13 in AIDS book group, and I encourage all of you to read  
14 it.

15           It has the most -- it was copyrighted in 1990,  
16 it has the most up-to-date information about women, and  
17 lesbians, and safe sex, and the information, and the  
18 statistics, and the disinformation as well. And it's  
19 from sort of my generation and my activism perspective.

20           And I think it would give you all an  
21 interesting perspective. There's only one thing wrong.  
22 You can't use Sarann Wrap for a dental dam.

23           CHAIRMAN OSBORN: Thank you, that is particularly  
24 useful. Thank you very much.

25           We need to adjourn now -- we will take an hour and

1 return to Commission business at 2:30.

2 Thank you all for your patience. We ran a bit  
3 late, and thank you for your forbearance in this fact  
4 that we had to be so pressed sometimes. We appreciate  
5 you're being with us.

6 MS. BYRNES: I've been asked to make the  
7 announcement that for any of the witnesses who have  
8 participated in the meeting today, as well as the  
9 Commissioners, we've made arrangements for lunch. If you  
10 check with Frank, he'll let you know where that is.

11 (A luncheon recess was taken.)
