SUBJECT: Summaries of clinical records. POW'S at Omi Japan.

TO : Medical Intelligence Officer.
Attention Major Saul Jarcho.

1. Enclosed are the records I promised you. They are complete clinical summaries of all the data which I have.
2. If you wish I will loan you the note books from which these records were made.
3. If a typed copy of the enclosed data is made I would appreciate a print.

Medical Report of American Prisoners of War at No 7 Despatch Camp, Omni Japan.

The following report is a summary taken from my personal medical records of the American prisoners of war at No 7 Despatch Camp, Omni Japan. It covers the period from April 25, 1944, the date on which this group arrived in this camp to the date of writing. Commander A. H. Cechka M.C. U.S. Navy was the only medical officer in this camp senior medical officer in this camp. I was the only other medical officer until the arrival of Captain John Rizzolo on May 16, 1945.

~~The care of this group general care of~~ The eye, ear, nose, and throat complaints of this group were treated for by Commander Cechka and his report does not include his treatment or findings. The major surgical care was provided for by Dr. Nata, the local industrial surgeon to the company ~~for~~ ^{by} which the ~~entire~~ entire camp was employed. The records are not complete due to lack of facilities. From ~~to~~ ~~I was absent~~ from this camp and have no record. But notes of most of the major illnesses are included.

"2"

Laboratory methods were as follows:

Urinalysis — urine boiled. Not tested for mucus, any white precipitate called albumin.

Sputum examination : Sputum was for tubercle bacilli. Sputum stained with carbolfuchsin and counterstained with methylene blue. No destaining was done. Red bacilli morphologically characteristic of Koch's bacilli were called tubercle bacilli.

Sedimentation Rates : Japanese army method was used. To 1.6 cc of 3.8% sodium citrate 0.4 cc of blood were added. The mixture was drawn into a tube about 2 mm ~~inches~~ diameter in bore and allowed to stand. Readings were taken at the end of 60 and 120 minutes. The second reading was divided by 2, added the ~~to~~ first reading and an average taken of this sum. This represented the average column of clear plasma in one hour.

Stool examinations : Numerous stool examinations were made and organisms very similar to endameba histolytica were seen but none were noted even on the freshest stools. Ascaris lumbricoides infestation was extremely common in this camp. One survey of stools by myself showed that of over 50% of the camp contained ascaris lumbricoides ovain their stools.

31.
Weight Records: Weight records are available on every man included in this report. There are occasional obvious changes, but the same scale was used each time and the relative weights may be compared.

Drugs used: Cases of suspected amoebiasis were given ~~sulfonamides~~ Yatenin, ~~a Japanese~~ 7-Iodo-8-Oxyguanoline-5-sulfonic acid, (a Japanese brand of chinofon.) This was given in courses of 4 or 5 cc of 3% solution daily, intravenously, for 10 days. Virometin, Iodochlorhydroxyquinolin 50% and pectin 50%, (a Japanese brand of Vioform) was given in courses of one gram per day for ten days. These courses were often repeated when the drug was available. A few patients received emetine hydrochloride one or two percent. This was given daily in one cc doses for ten or fewer days. Few patients received full courses because of the shortage of this drug. Patients who had diarrhea recurring one or more times per month and who were unscarred by any of these drugs have been listed as probably having amoebiasis.

The cases listed as having suspected tuberculosis often received medication containing an unknown amount of meosat. ~~Hip~~

Common Illness encountered. The following illness occurred in epidemic form in this camp from time to time.

Edema: Pitting edema of the lower extremities, occasionally accompanied by fascial edema, and sometimes by ascites was always referred to by the patients as *ben ben*. This edema however was usually very resistant to thiamin hydrochloride in doses of 5 to 20 mgs per day and usually there was no accompanying peripheral neuritis. It was thought to be due to hypoproteinemia and definitely improved when the diet contained meat, fish, and soya beans.

"Painful feet syndrome." Many men complained of pain in the feet and always referred to their complaint as *ben ben*. The pain, however, was most often not neuritic in type but more in the nature of aching in the feet and legs after working all day. These persons usually were underweight, had muscular atrophy, though often no pes planus.

Some men had definite electric like pains and ~~tight~~ tingling sensations in their feet, were made worse by rest, had exacerbations following ~~illnesses~~ febrile illnesses or diarrhea, and were improved by thiamin hydrochloride.

Gaseous indigestion: Most men complained from time to time of gaseous indigestion with hydrogen sulfide like gaseous eructations, much flatus, frequent watery stools, severe abdominal cramps. This always occurred when the diet contained large amounts of barley and was worse when it contained much soya beans. The diet often contained large amounts of both.

Fever: There were about four epidemics from the fall of 1944 (October or November) to the summer of 1945. These were characterized by gradual increase in the numbers taken ill until a peak was reached and then a gradual and sometimes fairly rapid diminution in new cases. The illness were characterized by sudden onset of fever which ranged between 37.5 and 39.5 and lasted from two days to a week or more. There was seldom any ~~separating~~ ^{infected} upper respiratory infection, never a skin eruption, and usually not much malaise or muscle pain. The fever was sometimes biphasic ^{for one or two days.} reaching a peak, dropping almost to normal and rising again to its former level. A frequent complaint was chest pain resembling pleurisy. Several patients developed pneumonia and pleurisy with effusion during these epidemics. They were virus ~~epidemic~~ fevers in my opinion and may have been insect borne. There have always been either fleas or lice in this camp since my arrival.

Muscle cramps: A common complaint was cramp like pains in the muscles of the extremities. This was often extremely painful, and in a few cases caused corporeal agonism. The reflexes were never hyperactive, the cramps were not often correlated with diarrhea, and though the condition was commonest amongst those who sweated heavily — that is furnace workers, many others had the same complaint. It seemed to be improved by 30 day courses of calcium phosphate one gram per day and some sort of mixture of ~~desiccated~~ desiccated ductless glands which I add to doses of one half gram per day.

" 6"
Scrotal dermatitis. Some cases of scrotal dermatitis were seen but most were thought to be due to epidermaphytosis and responded to local fungicides.

Arioflavinosis - Some cases of maceration of the corners of the mouth were seen, seldom accompanied by dermatitis of the lips, ear lobes etc; but often with glossitis. They did not respond well to riboflavin.

Glossitis: There were not many cases of glossitis, atrophy, or painful tongue. There were a moderate number who had geographicus of the tongue and occasionally ~~borders~~ papillitis of the border of the tongue. These patients usually had chronic bronchitis.

Pleuritis: There were about 5 to 10 persons in the entire camp (British and American) who developed hard and palpable pleuritic friction rubs. These were frequently only mildly painful, might last only a day or two, and were accompanied by fever for only a day or two. Several had friction rubs which were painful and persisted for weeks.

Hematuria: A reasonably large number gave history of hematuria prior to coming to this camp. Few developed hematuria in this camp.

Renal pain: A large number complained of abdominal and flank pain and on examination had costovertebral angle tenderness to shock percussion, nearly always unilateral, few had accompanying chills, fever, dysuria, cloudy urine or dysuria but many had frequency.

Emesis. The most malnourished and there were 4 or 5 cases of emesis. These occurred among the most malnourished and among the personalities to be expected of this complaint. Some however imposed on sulfamides in small doses, and gave other symptoms suggestive of cystitis.

Hypotension: Amazing figures of hypotension are recorded. These blood pressure readings were taken with a aervid type of sphygmomanometer which was well made and is estimated to be accurate. In general the blood pressures of one year ago are much higher than those ~~of~~ recent date. Many men complained of "block outs". That is a tendency to faint but principally the vision failing suddenly. This was especially noted on bending forward or rising from the prone to the standing position. The complaint was very popular at one time as an excuse for avoiding work but soon lost its popularity. It is estimated to be a truly common complaint (far more common) than amongst ~~other average~~ healthy men of the same age.

11 March 1946. Further perusal of records show blood pressure figures below shock levels. The sphygmomanometer readings had best be disregarded.

①
306 W/2101196 C.W.O. SNIDER, E.J. May 1/1944. Thiamin hydrochloride for painful feet syndrome. 8/15/45. Neuralgic type pain and tenderness in lower extremities from time to time until present date.

307 6207788 T/Sgt. AUSTEN R.L. Health in this camp always good.

308 A/595008 DEPRETIS J 3/30/45. Sudden onset of dizziness followed by slight nausea.

Vomited one time. 3/31/45. Blood Pressure 150/70. 4/11/45 Dizzy spell lasting one half hour and not severe, one or two hours less severe. Impression: Cerebral muscular arterio spasm. 6/20/45 Sprained right ankle.

309 6251851 T/Sgt DAVIS RE Past history of rheumatic pains. Sometimes

in this camp. No evidence of arthritis on physical examination.

Acute diarrhea November 1942. Chronic intermittent diarrhea since then responding to Viamatin. Impression Amebiasis.

~~Leukocyte~~ Sedimentation Rates 5/9/44 27, 9/8/44 7.0, 9/22/44 7.75, 9/30/45 10.25.

310 6285215 T/Sgt EGGER'S J.A. 4/20/44 Regular weight 210 lbs. Weight now 122 lbs, Chronic cough during past winters and ~~now~~ edema. 5/23/45. periorbital edema, cold sensitivity, mental sluggishness, thick speech, tendency for mouth to hang open. Given ~~desiccated~~ thyroid 0.065 grams daily with definite improvement in all symptoms and findings. Sedimentation rate 4/7/45 29.0. Impression: Hypothyroidism.

311 R/630014, 1st Sgt BASYDEL, F.G. Chief complaints of rheumatic pains right shoulder and pyrosis. Impression: Rheumatism. Sedimentation Rate 5/18/45 23.7.

312 6131858 T/Sgt MIGNEAULT W.A. Past history of tuberculosis age 5 years. 12/19/45. Tenosynovitis right foot. Recurrent diarrhea in this camp and severe weight loss. Sedimentation Rate 8/1/45 17.0. Chest examination neg.

313 6492275 T/Sgt DIRKS F.H. 4/26/45. Severe weight loss. Past history of severe weakness, scrotal and leg edema before arrival here. Height 6'4" Weight 145 lbs. Course in this camp of general weakness, edema, nocturia, frequency, severe carbuncles all improved following thiamin hydrochloride therapy. Sedimentation rates 5/18/44 37.75 9/8/44 18.0

2

314 20811427 1st Sgt VICKERY J.N. 12/28/44 Small area of pneumonia right base followed by low grade fever for about one month. Sedimentation rates 1/17/45 8.75 1/20/45 5.0

315 6274674 S/Sgt DAVIS P.B. 8/13/44 Back ache 1/2/45 backache 4/9/45 Back pain area of left costo-vertebral angle and some frequency this date.

316 6139491 S/Sgt HALL L.M. Past history suggests pulmonary tuberculosis age 10 years. 5/4/44 Mantoux 8x8 mm. Sedimentation rate 20 mm. Chronic recurrent diarrhea possibly due to amebiasis. Chief complaint is frequent attacks of pain in the right lower quadrant of the abdomen often accompanied by nausea and vomiting. Physical examination of abdomen, inguinal rings, and external genitalia negative. Impression adhesions or congenital membrane binding caecum. 6/24/45 Varicella. Sedimentation rates 9/8/44 20.0 9/22/44 25.0 11/7/45 20.5

317 19050522 Pfc. RAGLAND C.W. Past history of asthma, and chronic cough. Chest examination 5/30/45 loud inspiratory and expiratory rales. Impression chronic bronchitis. Course in this camp. Chronic weight loss largely due to selling of food for tobacco, chronic cough. Chronic sinusitis and symptoms of chronic cystitis. 7/29/45 Back pain with radiculitis 1st to 4th lumbar vertebrae. 8/1/45 Right testicle slightly swollen. Right spermatic cord tender. Digital examination of rectum normal. Prostate felt normal. Improved with sulfamidines therapy. 8/11/45 Scrotal epidermaphytosis. Sedimentation rates 5/18/45 45.0 9/11/44 33.5

318 6582764 S/Sgt LUDLOW W.S. Severe weight loss for about eight months rapid improvement when attached to kitchen personnel. Sedimentation rate 12/21/44 17.0

319 1300 1589 S/Sgt KUYENDALL AG Severe diarrhea and malnutrition on entry to this camp. Chronic recurrent diarrhea improved by Promethin. Impression: Amebiasis.

320 6910154 Sgt HUBANS M.L. Health good.

321 20843133 S/Sgt BAKER M.L. Chronic frequency, nocturia, dysuria, urinary urgency and sometimes oliguric urine. Several times severe back pains radiating to testicles. Urine examination 4/27/44. No albumin but many shreds. Relief of symptoms with continuous treatment of small doses of sulfamidines usually one gram per day. Frequent indigestion and pyrosis. Impression: Chronic pyelitis and cystitis.

(3)

322 R/3498358 SGT EDGE, M.

Past history of flaccid rectal prolapse with effusion. 5/12/44 Mantoux 13x20 mm. wheel. Sedimentation rates 5/12/44 6.75. 9/8/44 11.0. Chronic diarrhea since July 1942 worse in summer than in winter, seldom severe. Impression. Possible amebiasis.

323 6874518, SGT. BROWN, H.B.

10/10/44. Rock fell on left foot. Injury to second and third metatarsal bones.

324 6389599, SGT. BISHOP, S.D.

4/29/44. Past history of frequent chest pain. Said to have had an injury to chest in April 1944. Finger injury in this camp while at work. Partial amputation of finger by local Japanese surgeon. 7/30/45 Dysuria, pubic pain and pain suggesting of prostatitis. Digital rectal examination negative.

325 6564699, SGT BERMAN, A.

Chronic constant diarrhea with exacerbations since becoming a P.O.W. in the Philippines Islands. Chronic low grade fever intermittently recurring and lasting for months, Not definitely improved by quinine. Said to have had chronic malaria in the Philippines Islands. Impression: ① Chronic diarrhea, ② Chronic fever possibly due to malaria. Sedimentation rate 5/2/45 46.0

326 6835178, SGT FIGNAR, A.

Right middle and forefingers crushed and lacerated at work. Wounds debrided and closed. Healing satisfactory.

327 32024709 SGT COHAN, EA

Chronic recurrent diarrhea and fever. Impression Amebiasis and malaria. 10/27/44 Struck on head by a falling rock while at work on local quarry. Immediate concussion from which he recovered to stuporous uncooperative consciousness. Deep scalp laceration closed. No skull fracture to palpation. Gradual development of coma with rising blood pressure and tachycardia 10:45 AM B.P. 120/70 Pulse 44. 10:45P.M. B.P. 178/110 Pulse 160. Died 11:45 P.M. 10/27/44. Post mortem spinal fluid puncture revealed gross blood in spinal fluid. Final diagnosis: Head injury with scalp laceration, concussion and sub-arachnoid hemorrhage.

328 20843801 SGT CLANTON, A.R.

Past history of malaise in P.I. tuberculosis in childhood, Chronic recurrent diarrhea, — 5/9/45. Voiced his fears to me this day that his "mind was cracking". Aside from a tendency to deliberation and over earnestness when giving symptoms, no evidence of psychosis or major neurosis was noted. Later developed a liking for codeine which he tried to obtain by false pretext. Many statements found to be false and strong impression of dishonesty formed by myself since he has been under my care. Diarrhea responds poorly to

(4) specific amoebic; has never been given emetine. 5/12/45. Cyanosis of both hands noted when hands were in dependent position. 5/12/45 Pupils round equal and react to light. Heart normal size, pos radial pulses equal. B.P. 90/60. 7/15/45. Small bit of shrapnel removed from left upper arm and right thigh under local anaesthesia. Impression: Amoebiasis, Possible arrested pulmonary tuberculosis. Possible psychoneurosis.

329 32092602 Sgt LARSEN

Nutrition on animal in this camp was poor. Continued to lose weight because of hard work and poor diet. Developed edema of feet and pain in feet on walking. Gradual improvement during the first eight months. 7/20/45. Scalded foot. Healed in about 3 weeks.

330 6395404 Sgt. HUGHES F. L.

Past history of syphilis adequately treated.

5/23/45. Varicocele left side very tender. Treatment: suspensory. June 1940 injured first three fingers of left hand. Rapid weight loss during first three months in camp. Treatment thiamin hydrochloride and multiple vitamin pills. 7/11/45 Chronic diarrhea for three years worse in the winter.

Impression: Amoebiasis. 3/1, 3/45 Chief complaint: Motor weakness, muscle cramps, headache, scaly skin, aching in bones. Examination: Neurological examination negative except for severe muscle weakness and slight tremor of weakness. B.P. 105/58, skin icthyotic. Examination for visceral syphilis negative. Treatment Vitamins A, D, Multiple Vitamin pills, calcium, ~~vitamin~~ Biotin. 3/16/45 B.P. 105/58. General marked improvement in spring and summer of 1945. Sedimentation rates 3/15/45 89.0 3/25/45 32.25.

331 66 7711 Sgt DURHAM W. O.

Past history of rheumatism age 10 years. 5/1/44. Some shortness of breath since August 1943.

7/3/45. Slight orthopnea, basal soles, liver slightly enlarged and tender. Started on digitalis. 12/20/45 Heart enlarged to the left and upward. Loud prolonged systolic murmur, and rambling presystolic murmur at apex and mitral area. Since then has been continued on varying amounts of digitalis. At times has symptoms of ~~extra systoles~~ ectopic systoles and probably short spells of complete anhythmia. Pulse rate on digitalis 0.065 grams per day was 40 to 66. Impression: Rheumatic heart disease with mitral stenosis, cardiac dilatation and hypertrophy, intermittent arrhythmias ~~at~~ these ectopic beats or auricular fibrillation and early cardiac failure with systemic congestion.

(5)

332 7023737 Sgt. YOWELL J. W. General health and nutrition always good. 7/4/44 Complained of persistent headache. Spinal lumbar puncture: Fluid grossly normal and pressure appeared normal. Neurological examination negative except for questionable positive Babinski reflex of left foot. Repeated examination Babinski negative. Impression: Headaches feigned to avoid work.

333 6250962 Sgt. HEREDITH E. V. 11/14/44 At about 8⁰⁰ AM this day was injured by an explosion while at work in local quarry. Taken immediately to local hospital and treated by local surgeon. Bone splinters removed. Small laceration made the fracture of leg compound. Leg improperly splinted by bandaging to a flat wooden splint. When seen by me he had developed a foot drop with ankylosis of ankle, chronic osteomyelitic sinus and bowing deformity. Condition remained about the same to the present. X-Ray in August 1945 reported to show no large sequestra. 7/21/45. Following the second injection in a course of typhoid vaccinations he developed almost at once after the injection a chill, vomiting and later diarrhea. Tongue cyanotic and Blood Pressure lying down was 20/10 ^{several hours later was} several hours later was B P 25/15 Pulse 136. 7/23/45 B P 50/48. 7/24/45. Gingivitis. Typical fusiform bacilli and spiroilla of Vincent's seen in fresh sputum. Injured with local applications of ~~iodine~~ Trichloro Iodine.

334 6396104 CPL DENMARK 187 Past history of ulcer of epigastric symptoms: Epigastric pain relieved by eating, black tarry stools. Treated for several months for severe upper quadrant pain relieved by eating and lower abdominal pain made worse by eating, persistent constipation, nausea and vomiting. Examination: Peptic ulcer. Gastric constipation. Treatment of milk, rice porridge, atropine, sedatives, antacids, Vitamin C, Bismuth hydrochloride and organic iodide preparations specific for amebiasis. General improvement and today complete recovery. Chronic gingivitis responding to Tr. of Iodine locally. Sedimentation rates 9/30/44 13. 25 10/18/44 40. 5 12/15/44 20. 5

⑥

335 6975707 CPL STROBING I

Chronic severe, almost

constant diarrhea while in this camp. Responds to sulfonilamide, Viometin. Has never had adequate therapy. Impression: Amebic dysentery. Had 3 injections of emetine. Third injection on 12/20/44 became infected. Large abscess left arm widely incised and packed by local Japanese surgeon, Dr. Nata.

1.

336 6982522 CPL McWHIRR HA Chronic intermittent diarrhea. 3/22/45

Pleural friction rub heard right chest mid axillary line below nipple level. 3/23/45 Developed ankle and facial edema. Sed Rate 3/25/45 28.25. Blood pressure 8/5/45 57/22.

337 6588778 CPL JOHNSON T.L. Developed extreme weight loss during early winter of 1943-1945. Weight and nutrition now good. ^{August 1945} Left wrist injured when struck by Nippon worker.

No evidence of fracture but pain and swelling prolonged. 8/31 Painful swelling persists - probable fracture.

338 17003372 CPL CHRISTIANSEN A.L.

Chronic recurrent diarrhea. Impression: amebiasis. 10/31/44 Sacroiliac sprain sustained while at work.

339 6277775 CPL BIGHAM J.P.

Family history of tuberculosis. Past hist of edema, malnutrition, and chronic cough on arrival in camp.

6/19/45 Fractured rib left side. 7/29/44 One 10 ^{injection} ~~injection~~ course of emetine without improvement. 7/29/44 Past history of syphilis 1931 with immediate continuous treatment for sixteen months.

9/15/44 Sed Rate 9.7.5 3/15/45 Sed Rate 30.25 3/31/45 Sed Rate 64.5

4/2/45 Entered hospital ward complaining of extreme weight loss, emaciation, chronic severe cough, chronic post nasal catarrh. History of starvation due to trading of food for tobacco; standing extra night ~~picket~~ picket duty for tobacco. Examination:

Emaciation, gingivitis, atrophic rhinitis, deviated septum and hypertrophic degeneration of lower turbinate. Chest not remarkable.

Course in hospital. Chronic low grade fever for several months. Given every type of available medicine: A.B.C.D., yeast preparation, and sometimes prolonged courses of small amounts of sulfanilamide usually one gram per day.

Gradual improvement. Condition now very poor. Sedmentation

①
rates. 9/15/44 9.75 3/15/45 30.25 3/31/45 64.5 5/11/45 62.0

not returned to this camp.

342 35001350, CPL HARRIS H.C.

5/5/44 Family history of tuberculosis.

Blood streaked sputum for past 2 weeks. Causse in this camp. General health good except for severe head aches from time to time.

Should be examined for pulmonary and renal tuberculosis.

Chronic ~~face~~ maceration at corners of mouth not responding to riboflavin. Sedimentation Rates ~~9/18~~ 5/5/44 24.25

9/8/44 27.0 9/22/44 26.5 1/8/45 9.75. 3/20/45 28.0

BOEHRS, CE.

343. 19056382 CPL ~~REED~~ H.S.

after arrival in this camp were weakness, great weight loss, edema of legs; general improvement with thiamine hydrochloride. 8/27/44

Glossitis - Tongue beefy red. Impaired with multiple vitamins.

9/17/44 Onset of jaundice with some pain radiating to right scapula. 9/27/44 Spasms of pain in left upper quadrant. no fever.

10/3/44 Liver down 3 fingers. Illness entirely afebrile. Ed Rates

9/14/44 10.75 9/30/44 6.5. 10/18/44 6.25. 11/8/44 Liver down two fingers. Gall bladder ~~tenderness~~ not palpated but

pain referred to left upper quadrant. Hyperesthesia over entire intercostal areas and costal areas which terminate over

the gall bladder. Past history of chronic indigestion and intolerance of fats. Impression: Cholelithiasis, cholecystitis, obstructive jaundice. 5/28/45 Recurrence of indigestion & Right upper quadrant pain with ~~referred~~ referred pain to right shoulder blade. Liver down one finger. 8/18/45 For past year has complained of severe

pain in area of left scapula: Possible left scapular subscapular bursitis. ② Cholecystitis & lithiasis.

(8) 344 18015241 DR MOSHER V.A.

General health in this camp good. Has made several insincere attempts at suicide. Past history of symptoms resembling petit mal epilepsy. 5/29/44 Had an attack of confusion (?) and became violent while at work. 8/18/45 Has exhibited character defects of dishonesty, dishonesty, and antisocial conduct which in view of intelligence may be evidence of some type of early psychosis.

⑧ 345 19032470 THAUF R

9/18/44 Symptoms of peripheral neuritis of feet improved by thiamin hydrochloride. 11/13/44 Friction rub heard and pain at base of left chest near axillary line. General health good.

346 20843773 CPL WHITTED J.J.

Past history: Good health until December 1943, then bouts of fever with true chills and fever sometimes three times per day. Recurrences lasted 1 or 2 days every 10 to 15 days. Persisted ~~till~~ until the warm weather of 1944. Concomitantly the subm axillary and perieparotid glands became noticeable but not painful. No other illness or infection until the development of a chronic ulcer on the left leg following trauma.

Examination on 7/28/44 on arrival in this camp. General health appears fair. Pupils round regular, equal and react to light. Mouth negative. Submaxillary, periparotid and cervical glands are palpable. Heart and lungs negative. Liver, spleen, and testes normal. Cause in this camp. Irritable ulcer on leg healed slowly. General health remained fair. 7/27 Hemorrhoidectomy for internal and external hemorrhoids done under spinal anesthesia. Post operative course uneventful except for tendency of anal orifice to stenose. No post operative dilatation done because of lack of rubber gloves.

347 4019778 CR BECHERER H.P.

Chronic intermittent

diarrhea before coming to this camp. Came in this camp of chronic diarrhea and general poor nutrition. Diarrhea was not affected by any of the following drugs. Reimon (2-ethoxy-6,
9-diamino-acridine lactate), sulfonilamide, Vatemin (1-Iodo-
8-Oxyquinoline-5-sulfonic acid), Viometin (Iodo-chlor-hydroxy-
quinolin), Emetine, or massive vitamin therapy of assorted
vitamin concentrates. General health remained about the
same despite long periods of complete bed rest. 3/5/45

Complaints were chiefly those of colitis, gastritis, and glossitis.

5/9/45 Sudden onset of extreme abdominal pain resembling
bowel perforation but several days later the pain had subsided
and no masses have ever been felt in the abdomen.

7/9/45 Received 250 cc of citrated whole blood. 7/15/45
developed Hoarseness of voice which had been perceptible for
several months now was marked. Indirect laryngoscopy showed
pale edematous edema of true and false vocal cords.

7/21/45 Received 500 cc transfusion of citrated whole blood.

7/12/45 X-Ray of chest taken this date shows infiltrating
tuberculosis of left lung. 7/31/45 Sigmoidoscopy showed
no evidence of colitis either ulcerative or tuberculous.

8/1/45 Under combined local and spinal anaesthesia a gastrostomy
was done by local Japanese surgeon, Dr Noda. Patient
had been intubated 2 times per day for several weeks because
of dysphagia. Post operative course uneventful. 8/16 Constant
fever for several months temperatures between 38°-40° C.

Note: For months this patient has been in a small
very crowded ward often lying next to men with active
pulmonary tuberculosis.

Sedimentation Rates. 9/8/44 53 - 11/1/44 43.5, 11/22/44 44.

12/3/44 30 3/15/45 62.5 3/31/45 52.5 5/10/45 63.5.

8/16 Rapid decline in general health. Cervical lymphadenopathy
becoming massive.

8/27/45 Died at 10:55 AM this date.

351 - 32092586 PFC DEGIACOMO P. General health fair. Frequent diarrhea summer of 1945. 11/11/45 Right foot injured when an iron plate dropped against it. Pain and swelling over the head of the first metatarsal bone, no crepitus. Impression: Possible fracture.

352 - 18048889 PFC HERRIMAN F W. Several bouts of tonsillitis winter of 1945. Several bouts of recurrent low grade fever in the winter and summer of 1945. Cause unknown. 6/22/45 Tachycardia from time to time with extra systoles, especially on exertion. Shortness of breath on exertion. Tendency to nervousness in the nature of stage fright; great cold tolerance, poor heat tolerance. Examination face flushed with circumoral pallor. Eyes negative. No tremor or sweating. Neck - area of thyroid appears enlarged but thyroid not palpable. No bruit. Pulse 98. - This tachycardia checked many times and is persistent. Blood pressure 64/45. Impression: ① Fever cause unknown. ② Possible Thyrotoxicosis. ■

353 15065618 Pvt Cox R.N. 8/18/44 Fell down about five to eight steps complains of acute back pain. Position in falling not known. First examination acute general back ache and exquisite lumbar pain, lumbar muscles spastic. Maximum tenderness to palpation over transverse processes of 1st, 2nd, 3rd lumbar vertebra, right side. Treated by bed rest for months. Symptoms persistent beyond expected time — probably patient's attempt to avoid doing work. - 6/25/45 lost tip of left forefinger. Self inflicted to avoid working — by patient's admission.

13

357 18001804 Pvt. WAYMAN D.L. 4/29/44 Post history of pneumonia in February 1943; Influenza July 1943, Pleurisy with effusion left chest December 1943. No hemoptysis since pneumonia. 5/12/44 Mantoux 15x15. Sedimentation rate 3.75. 9/8/44 2.0. 5/31/45 Chronic stationary butterfly distribution of scaly erythema of face and forehead. Does not have the true induration and infiltration of lupus lesions.

358 - 15017130 PTE YOUNT Z RL. 4/26/44 Post history of old back injury as a P.O.W. Health in this camp good.

359 190549 PB PFC. FOURTNER RR. Chronic intermittent diarrhea an annual in the camp. Frequent backache. History of back injury in childhood. Impression ① Anesthesia ② Chronic backache due to old injury.

35700536 DOWELL D.A (Pvt)

360 - Post history of pleurisy in the Fall of 1943 5/11/44 Friction rub over anterior left chest. Chronic fever from time to time sometimes treated with quinine. 3/26/45 Low grade fever following influenza. Pleuritic friction rub heard in right chest. 4/21/45 Friction rub persists. 7/16/45 Epigastric pain relieved by eating and antacids. Chronic intermittent diarrhea for several years. 8/19/45 Abscess left foot excised. Impression ① Anesthesia ② Chronic recurrent pleurisy possibly tuberculous ③ Possible peptic ulcer ④ Abscess left foot. Sedimentation Rates 9/11/45 5.0 3/23/45 9.5 4/13/45 7.5

361 1902115 DAY G

Complaints of pain in right arm below old gun shot wound. Weakness Examination: Weakness of left hand possible atrophy of left arm muscles. Has stocking and glove anesthesia to pin prick both arms and both legs. 5/25/45 Acute appendicitis like pain lasting 48 hours; abdomen has guarding without rigidity. Impression ① Old Gun Shot Wound left arm possible nerve injury ② Hysterical anaesthesia ③ Appendicitis healed.

(14) 15017357 Pvt MANCINI F.

362 1501730. Pvt MANCINI R. Past history of possible psychopathic conduct in previous camp. Several attacks of bronchial asthma relieved by ephedrine by mouth.

7/1/44 Left upper molar tooth extracted under poor local anaesthesia. Extraction difficult and prolonged. That day patient had 3 epileptiform attacks. Pulse at this time between attacks was 38. The day following 54.

Has had several such attacks since then probably 5 or 6 in all. Impression ① Idiopathic epilepsy. ② Bronchial asthma.

18063269 Pvt BEEM DK

19034483 PFC FOX

363 General conduct in camp bordering on psychopathic. Sometimes voiced fear of walking out of camp in his sleep, general timidity.

5/19/44 Appendectomy by local Japanese surgeon, Dr. Noto. No evidence of appendicitis but small fish bone found lodged in the distal tip. No inflammation in any part of appendix. Impression ① Psychoneurotic type not determined.

364 19032477 Pvt TROTTER R.L.

Past history of diplegia on arrival in Japan probably diphtheritic. 4/19/45 Deep infection of left forefinger incised and cleaned. Eventual healing satisfactory. 5/31/45 to present date Tumor over right inguinal area which subsides with rest and appears on walking. Inguinal ring not very much enlarged. Impression ① Inguinal hernia.

365 15962902 Pvt FULKERSON J.F.

Chronic intermittent severe diarrhea. Impression amebic dysentery. 10/12/44 Herpes zoster of intercostal nerve between ribs 10 and 11 rapidly improved with flurinum hydrochloride treatment.

4/30/45 Questionable hematuria in the past on question mark.

7/22/45 Given calcium one gram daily for muscle cramps and pain... claims to be improved. Impression ① Amebic Dysentery.

Also chance inclusion possibly due to cystitis

(16)

371 NO 7495

Pt JOHNSON C.E.

Past history of vomiting

blood, said to have had a peptic ulcer. Past history of sudden blindness while in POW camp Osaka. Blind for ten weeks and gradual recovery.

5/21/44 Sudden renal colic like pain in left upper abdomen with radiation to the pubis. Claims to have had many such attacks especially after being chilled. Past history of gonorrhoea with epididymitis, bilateral, and prolonged urethritis.

5/21/44 Physical examination: Visual fields, and visual acuity roughly normal. Rectal digital examination: Seminal vesicles somewhat tender.

5/21/45 Fell down 2 or 3 stairs landing on buttocks. Immediate complete paralysis of both legs and loss of tactile sensation both legs. About five hours later some sensation returned and patient patient was able to move his toes. Later examination showed ~~some~~ normal motor & sensory ability. Ankles and knee, abdominal, cremasteric, Babinski reflexes normal.

5/21/45 Spinal puncture: fluid clear, pressure roughly estimated as normal.

6/18/45 On excitement, anger and overfatigue he has a slowly developing cramp like "stretch in the side" pain with resulting dyspnoea, being unable to take a deep breath. The pain radiates into the left scapular area. Heart small, no ~~thymoma~~, rhythmic and regular. BP. 85/48. Liver and lung bases neg. Impression:

② Nervous instability ② Diaphragmatic spasms neurogenic ② Possible hysteria ③ Possible peptic ulcer. ③ Possible nephrolithiasis of left kidney. ④ Possible hysterical amblyopia cured.

372 20600426 Pt RUSCH H.A.

Past history of psychopathic personality or mania in that he violently attacked several people before coming into the in civil life.

History of attacks of head ache and confusion in previous camps. Also attacks of violence in which he tried to do bodily harm assault even his close friends, afterwards expressing great regret. Has had similar attacks of violence in this camp. Some history suggestive of petit mal epilepsy. During attacks of maniacal excitement he is exceptionally strong, seems completely disoriented, grinds teeth, and appears trance like but not especially excited.

Between these rare attacks he is pleasant, courteous, cooperative, cheerful, and well oriented. On 5/27/44 he was sent to POW hospital Tokyo and returned here 6/14/45. Impression: Patent epilepsy ② Intermittent homicidal mania. Recommended psychiatric confinement at once.

(17)

373 160 13489 PFC MERCER CA

Past history of congenital heart disease. 5/10/44 had to end from numerus. Heart not enlarged. No clubbing of fingers, but sometimes cyanosis. 5/10/44 Sudden chest pain resembling pulmonary embolus, but no further recurrences. No other evidence of bacterial endocarditis. Has never given evidence of congestive heart failure. Impression: Congenital heart disease.

374 19054986 PVT SPALL

Past history of deafness following bombing attack while on duty in the Phillipine Islands. Impression: chronic otitis media and auditory nerve neuritis. Past history of severe low back pain for same years. Several such attacks in this camp, with complete disability and great pain. Partial relief obtained with a crude back brace made of ~~the~~ girdle strap, padded over the sacroiliac joint, and upright bar fixed to a cross piece which in turn was strapped to the shoulders.

Impression: ① Auditory neuritis bilateral following explosion.
② Sacroiliac back ache cause unknown, chronic, recurrent.

375 1403538 PVT BREWER WT

Chronic recurrent rhinitis, chronic indigestion, and urinary complaints of enuresis, frequency, dribbling ~~and~~ with urgency and no control when urged to micturate. 5/31/44 Pupils and pupillary reflexes normal, patellar reflexes and rectal tone sphincter normal. 10/20/44 saddle area normal to pin prick. 4/18/45 lacerated left forefinger healed satisfactorily. Impression: ① Possible anæsthesia ② Chronic cystitis. ③ ~~possible neuritis~~.

376 19019929 PVT BEVOLDEN CN

Past history of malacia, jaundice, and weight loss on arrival in Japan. January 1943 treated by rest for 3 months for "pumpful feet" anorexia and edema. September 1943. Gross hematuria with clots, agonizing right renal pain with radiation to testicle and dysuria, chills and fever. Three attacks of back pain in three previous years but no hematuria then.

Oct. 1943 was in POW hospital Osaka for 4 months and had three such attacks. In March 1944 worked one week and had great edema of left leg only from the hip down, had no infection. Pulmonary history: The in fathers family, sister possibly tuberculous. Has occasional blood streaked sputum for two years. Pain frequently in precordial

(19) 379 - 6061756 PFC CLARK O.R. Post history:
large inguinal hernia. Course in this camp. 8/26/44. Painful foot syndrome eventually improved by thiamin hydrochloride.
Winter of 1944-45 was struck by rock over tibia. Developed a chronic rather noninflammatory swelling which subsided in about 3 or 4 months. Was given prolonged therapy of Vatomin (a Japanese brand of ~~Vitamin~~ Chiniofon) 8/21/45 B.P.
~~7/4/3~~ 7/4/32. Sed Rates 11/22/44 13.25 12/3/44 10.0
Impression: ① Inguinal hernia.

380 - 19021098 PVT SCHROER H.W. Post history of

anorexia, pneumonia, carbuncles. Course in this camp: Numbness of legs improved by thiamin hydrochloride. 6/21/45 In quarry accident compound fracture of distal phalanges of ring and little fingers of left hand. 11/21/44 Sudden onset of chest and rheumatic pains following a wide excision of a skin ^{skin} ~~skin~~ ^{of buttock} abscess. Had had jointitis for sometime prior to this surgery. On 11/20 ~~11/20/44~~ ~~11/20/44~~
~~11/20/44~~ A superficial abscess of buttock excised. 11/21/44 Local area of surgery healing well but developed sudden severe chest and rheumatic pains. ~~12/3/44~~ 12/5/44 Large carbuncle of buttock incised and drained. Prior to this surgical illness patient had catarrhal jointitis for some weeks. 5/27/45 Frequent scanty day urination and together with nocturia for most of stay in this camp. Started ~~on~~ caffeine and ~~on~~ a Japanese vegetable diuretic. Definite improvement of these symptoms. 8/9/45 Sudden swelling of right testis. Started on sulfamides 4 grams per day. 8/21/45 No pain but swollen testis remains the same no evidence of suppuration. Past history of gonococcal urethritis in 1940. Impression ① Neisserian epididymitis ② ⁱⁿ Unmarked sexual activity cause unknown.

381 - 16013465 PVT SABO A Post history
of chronic bronchitis and sometimes hemoptysis. 5/12/43 Mandibular 1.4x1.2 mm. Sed. Rate 19.0. 7/15/44 Sputum examination showed acid positive for tubercle bacilli. Sent to POW hospital Tokyo. Never returned to this camp. Impression: Pulmonary Tuberculosis.

(2)

386 19051210 RT. JANSEN RL.

Past history of dry beriberi and corneal ulcer in 1943, pneumonia in March 1943. Course in this camp. 5/12/44 Manteaux 10x9 Sed. Rate 5.25 Complains of frequent chest pains. Tendency to recurrent low grade fever. Sed. Rates 9/11/44 6.5 12/20/44 6.5 Blood pressure ~~60/28~~ 8/6/45 60/28

387 13032524 Pvt WHITBECK E.T.

General health very poor because of extreme weight loss and general weakness.

3/22/45 Deep abscess (hematogenous) appeared in left deltoid muscle. Incised and drained. Infection cleared by wound very pallid, bloodless and slow in healing. Onset of low grade fever developing into high afternoon fever by 4/2/45. At fibrinous sterile exudate proven by thoracentesis of the left chest - basal. Then developed a sterile hydroarthrosis of the right knee. Thick gelatinous fluid aspirated several times for relief of pain. 5/9/45 B.P. 88/45 Belly tender to deep palpation over area of the second part of the duodenum, but no mass felt. Condition at this time - very anemic, underweight, sweating, sweats and continuous fever. 6/1/45. Physical examination eyes, ears, nose, throat normal. Chest examination normal B.P. 90/60 liver and spleen not palpable. R.I. and A.I. normal. No edema. No lymphadenopathy. 7/31/45 X-Ray of chest - poor film but no definite gross pathology. Probable thickened pleura on right side. Hilus possibly infiltrated on the right side. 8/2/45 Slight pain left lower rib and left costovertebral angle on deep palpation. 8/6/45. Prolonged sulfanilamide therapy without effect on fever. Rectal examination revealed tenderness anterior above the prostate but no masses. 8/14/45. Quinine 2 grams per day begun but little effect on fever. Sedimentation rates: 3/31/45 47.0 4/13/45 55.5 5/11/45 80.5 6/18/45 65.75 7/24/45 39.0

Injection D. Fever cause unknown. Possibly due to lymphosarcoma or other granuloma, chronic malaise, tuberculous etc. 8

history of gross hematuria winter of 1943-'44. Clots of blood in sputum one month ago. Pleurisy 1939 and similar attacks since then. 5/12/44 Manteaux 21x16 mm. Sed Rate 32.5. 7/18/44 Sputum contained tubercle bacilli. 8/18/44 Sent to POW hospital Tokyo. 1/31/45 Returned to this camp. States that stool found to contain

Ameba histolytica on examination in hospital. Said to

(24) Rose had shreds in urine, hematuria and right flank pain
~~had~~^{and} symptoms of cystitis while in Tokyo.
Sedimentation Rates 4/13/45 12.25. 7/24/45 7.75.
Blood pressure 8/5/45 68/18. General health in this
camp has been good except for chronic diarrhea.

Impression: ① Pulmonary tuberculosis ~~assessed~~
inactive ② Renal tuberculosis ③ Amebiasis.

(396) 6944458 R/T FIRL LL. 5/16/44. Past history
of back injury due to a blow during fighting in P. I.
Complained this date of back pain radiating from lower ~~sacral~~
lumbar and sacral area into the hips and penis. Maintained
this complaint for about one month, but when not occupied
from work he dropped this complaint and has not complained
of backache since. Post history of low grade fever for
five previous years. Formerly drank much goat's milk.
Has had jaundice while working in a silk factory.
Course in this camp: Frequent ~~few~~ temperatures of 37.3°
~~Cause~~ Complained frequently of severe pyrosis and
excessive salivation sometimes relieved by atropine.
Has a speech defect. Had inability to repeat such test
phrases as "Around the rugged rocks the rugged rossal
ran." Had almost daily hypochondriacal complaints
which he was never able to explain in terms of ordinary
symptoms. Blood Pressure 8/5/45 60/32. 7/25/45 Right
epididymis indurated. Sed Rate 9/8/45 7.0.
Impression: Systemic illness such as undulant fever.

397 6979249 R/T MIRANDA T. 61 Post history
of rheumatic fever age 16. Several heart examinations
showed transitory systolic murmurs. Course in this
camp: General health good. Complained of several attacks
of sudden chest pain and sudden abdominal pain but
physical findings were always negative. Sedmentation
rates: 9/15/44 8.75 9/19/44 17.75.

(25)

398 38011951 FC JORDAN AA

General health in this camp is poor due to weight loss. Much improvement in the spring and summer of 1945.

6/25/45 Had pain right costo-vertebral angle and along

course of right ureter. Urine was grossly clear. Sed. rate
8/1/45 44.25. Blood pressure 8/4/45 88/52 8/5/45 80/42.

399 16017860 PVT GRAWE W.V

General health in this camp to examination was good. Complained of quick fatigue when working, anxiety, unhappiness, nervousness, inability to sleep and emotional instability, and sometimes nervous indigestion. Condition was very much improved after he was employed in camp and no longer under Japanese supervision at work.

Mantoux 5/12/44 16 X 10 mm. Sed. rates 5/12/44 23.75

9/7/44 42.5 10/29/44 31.25 12/23/44 11.25. During

period of most severe neurosis he complained of sweating, dyspnea, and tachycardia was noted though not complained of.

Blood pressure 8/6/45 48/24

Impression: ① Neurocirculatory asthenia ② Anxiety type of neurosis.

400 18001810 PVT LANE R.N.

Past history of chronic diarrhea. Course in camp 12/19/44 Weight loss of .13 kilograms in 40 days. Examination: Severe emaciation and weight loss; over entire right chest especially the posterior inferior and lateral inferior areas, loud moist râles were heard. This area was dull but not flat to percussion. Left chest was normal. 12/21/44 Chest findings the same. 1/6/45 Chest findings the same. Throacenteris but no fluid. Impression at this time of possible amebic abscess supra or infra diaphragmatic. Liver was not palpable. From January 20, 1945 to March 10, 1945 had a spiking fever which now began to subside. Chest examination on 3/14/45 showed fewer râles. Aspiration of costophrenic gutter was dry. This area was still dull. No hepatomegaly. Constant diarrhea during entire illness. 4/8/45 Started on 1.5cc of 2% emetine daily for ten days. Diarrhea completely cured by this treatment. High epigastric pain for months not much affected by this treatment. Patient

26

Also complained of severe pain over right lower chest which spontaneously subsided sometime after the disappearance of the physical findings. 6/11/45.

Had injected left tympanic membrane of one or two weeks and a definite swelling noted in vicinity of the left parotid gland and the left post auricular lymph nodes. 6/11/45 Chest examination showed only a occasional râle and slight diminution of breath sounds over right lower chest posterior and lateral. Heart sounds were negative, liver and spleen not palpable. The area of the head of the pancreas was tender to palpation. No masses were felt. From April 1, 1945 to May 13, 1945 maintained a flat temperature of about 37.8°C . with few variations. May 14, 1945 temperature became erratic going up to 40°C but ~~suddenly~~^{after} down to 37°C in the A.M. Temperature gradually dropped so that from June 1st to June 26th temperature ~~rose~~^{rose} above 37° on only five days. June 28th 1945 patient was discharged from local dispensary hospital.

Laboratory findings: Sed Rates 9/10/44 3.5 12/19/44 20.0
 12/24/44 58.5 2/16/45 9.0 3/20/45 5.5 3/31/45 2.5, 3/11/45 9.0
 5/7/45 9.0. Urine 10/2/44 no albumin.

Summary: Extensive pulmonary disease illness, chronic, with extensive pulmonary involvement, spontaneously subsiding, accompanied by high abdominal pain not explained by physical findings, possible parotitis, unusual sedimentation rates such as found with hyperglobulinemia, spontaneous recovery. Impression: ① Systemic sarcoidosis or Besnier-Boeck-Schaumann disease.
 ② Amebiasis

(27)

401 20843824 PFC THOMPSON T.N. — Past history
 of pneumonia three times with blood in sputum. Family
 history: Pneumonia three times in the United States.
 Family history: Two sisters have pulmonary tuberculosis.
 Course in this camp: 5/12/44 Mantoux 13 x 12 mm. Red
 Rat 24.5. Has had chronic intermittent diarrhea, chronic
 weight loss occasionally blood and mucus in stools and
 pain resembling colic of the colon. B.P. 10/25/44 95/60
 Sedimentation rates 9/8/44 13.0 10/29/44 19.25 1/30/45
 36.25. Impression: Possible pulmonary tuberculosis
 ② Amebiasis.

402 19054276 Pfc HAYES C.S. — Past history of
 syphilis inadequately treated. Given a short course of
 penicillin. Bismuth in this camp. Had chance in 1941. Dark field
 positive; treatment started at once and continued continuously
 for nine months. Wasserman said to be positive
 and patient had a ~~syphilitic~~ secondary skin eruption.
 Course in this camp: 4/26/44 Flank pain, dysuria, belly
 pain, nausea, and flank tenderness. 4/27/44 Urine contained
 shreds but no albumin. Had some generalized & facial
 edema. Given sulfanilamide. 5/11/44 Renal colic type
 of pain right kidney area. 7/14/44 Urine cloudy, albumin 2 or 3 plus.
 7/18/44 Given bismuth 2 grains per week continuous course
~~for several months~~ about 5 or 6 months 12/13/45 Sebaceous
 skin lesions on neck possibly heretic. Developed severe abdominal
 pain and vomiting; possible ~~heretic crisis~~ tubercular
 crisis. Pupils and R.F. normal. 12/20/44 Pain follows the
 course of a lumbar radiculitis with hyperesthesia of the
 skin in a band lumbar 1 to 3. Is relieved somewhat by
 flexion of back and made worse by hyperextension.
 Started on Myoaremin, a Japanese arsenical for subcutaneous
 administration. Given 45 grams per week.

5/27/45 A short time after arsenical therapy stopped the abdominal cramps became much lessened in intensity. Arsenical sensitivity considered ~~to~~ ^{to be} there but the had been no such abdominal pain when on arsenical therapy in the United States. Patient has never shown evidence of mucous membrane syphilis but has a had a chronic undulated type of dermatosis on the back of his hands, a chronic impetiginous or seborrheic dermatitis of the face and lactic looking nitiligo of the neck. General health has been poor because of uncontrollable habit of trading food for tobacco. History has never been reliable since the patient habitually lies in all matters concerning his health in order to evade food trading regulations and in order to avoid work. Often has diarrhea. B. P. 8/5/45 38/35.

Ingression ① Syphilis, with syphilis of skin, possibly early ~~late~~ ^{syphilitic} meningovascular syphilis of spinal cord and resulting radiculitis. ② Malnutrition ③ Possible Onchocerciasis

403 6955646 P.C. Bush R.H. Past history of malaria recurrent, scurvy, anemia, and often low grade fever. Said to have had malarial onset in 1939 and some question of undulant fever in 1939. Had complete paroxysms of right leg of very sudden onset with slow recovery being hospitalized for seven months. Malaria in 1940 responded slowly to quinine. Severe untreated "malaria" with jaundice for six weeks and complete recovery. Japan November 1942 had "influenza or malaria" for 3 months. Since then has been in a hospital twice with pain in the right leg, large erythematous areas, chills and fever, inguinal lymphadenopathy, and edema and stiffness of the leg and gradual recovery. History of hospitalization for course in this camp: 5/1/45

29 six months at Fort Mills ante bellum. Had chronic fever up to 103°; anemia, leukocytosis, lung pathology by X Ray, lymphadenopathy right groin., erythematous patches up to five inches in diameter and these areas would migrate. These areas never appeared above the hip. Final diagnosis at Fort Mills was Typhoid fever. (Patient had drunk goats milk in the United States)

This history ~~seen~~ is a repetition of the above and does not correspond in all points. Patient's history ~~is~~ statements in this camp have often been unreliable.

Course in this camp. Has had bouts of prolonged fever not responding to quinine; sometimes recurrent diarrhea. Had a yellowish pallor of anemia for

~~Typhus~~ this camp but seldom had the symptoms of a severe anemia. Sed Rate 9/30/44 13.5.

Impression ① Chronic malaria ② Possible Typhoid fever ③ Possibly Amebiasis.

404 19049120 Pfc Morton W.A.

Past history of intermittent fevers; pneumonia in February 1944 - jaundice in the P.I. Course in this camp: Has ~~always~~ always complained of recurrent chest pain and complete exhaustion even after very moderate work. General health has improved while in this camp. Has had a consistently high sedimentation rate. Feels much improved by small doses of caffeine by mouth. Has internal hemorrhoids which occasionally bleed but has had no great blood loss.

Sed. Rates.

9/8/44	30	10/18/44	60.25	11/22/44	45.75	3/20/45	50.5
9/22/44	13.25	10/29/44	57.25	12/12/44	41.5	7/24/45	53.0
9/30/44	46.5	11/9/	33.0	1/19/45	33.0		
10/10/44	61.5	12/2	35.5	2/2/45	33.5		
		2/12	59.0	3/12/45	59.0		

Impression: Chronic afebrile illness possibly tuberculosis.

MRS CAREY H N

Post history

age 15 years and sanatorium treatment for

hs. Severe pneumonia ^{inter} November 1942.

In hospital for five months sever. Claims to have had blood streaked sputum for months until spring 1944. Course in this comp. 5/13/44 Mantoux 9x9 mm Sed Rate 18.5. Has had chronic post nasal drainage for 2½ years and severe hacking cough. The cough has been very much improved by creosote tablets and some type of Japanese cough powder said to be good for tuberculosis. Has had ~~constant~~ weight loss severe weight loss due to inadequate rations and the uncontrollable habit of trading food for tobacco. Sed Rates 9/7/44 58.5 10/29/44 39.25 12/3/44 24.0 12/12/44 23.0 3/4/45 22.0.

4/7/45 46.25 5/12/45 23.0. X-Ray film of July 23,

1944. P. Pleura, hilum, lung markings not remarkable. Posterior at levels of ribs 6-7-8 are 3 shadows. The 1st 1.5 x 1.5 cm. The others a little larger. All but the 1st are located away from hilum. All are faint and smudged but definite in outline.

Impression: Possible Pulmonary Tuberculosis.

303 86578144 CPL OLSEN E February 22 1945 twisted

foot and fell while working. Treated by local Japanese surgeon as a sprain. Physical examination about one month later showed deformity of fibula. X-Ray on April 30, 1945 showed old well healing oblique fracture of fibula just above the malleolus. Has had several recurrences of malaria responding well to quinine. No recurrence in the past year. 6 months.
