## PREFACE.

HE Reader will immediately be fenfible, that I lave been led into the first part of this Treatise wpontracing the Impofitions and Inconfiftencies of the Author of a Pamphlet Intitled Onania; and for the latter part it may be eafily concluded to proceed from no other Motive, but the Dictates of Nature.

It was impoffible for an author of any Spirit, after a particular defcription of the unnatural use of A 2
the

## ii The Preface.

the Parts, that be could finish bis Labours without thoroughly examining their admiral Structure: They being no lees curious than delightful to a Youthful Swain, that's fir'd with Imagination.

The infinite number of fine Veffels are pleafing in Reprefentation, as well as otherways Ravibing, and the Nerves and Arteries are equally beautiful, as they are transporting. The great and exquisite fence of the Parts of Generation, give an Enjoywent tranfcending all others; and the Wisdom of ar Creator, for the rapport of the World, cannot be too fufficiently admired, in that Man is prom tragated by an excess of Pleafure.

The follareing TreatiSe, I have by 110 means compos'd to give a loofe to 'Debauchery. I have only perfu'd the common Rules of Anatomy in this way of Writing, and interfpers'd a great variety of curious Ob. fervations and natural Confoquences as yet uwablerved, and I was naturally

## The Preface．iii

rally induc＇d to it more for the In－ formation of Mankind in general， than for the Sons of 无fculapius in particular．The Gentleman of all Ranks not Superannuated，may find forme Pleafure in perufing it，and the fair Sex will meet with such ample Inflections，as not to fail in the choice of an agreeable Person，for the amorous Combat．

For my Differtation upon the Ge－ neration of Man，I am chiefly ob－ lig＇d to Meffieurs Lamy，and Do－ nis，＊thole two excellent eAnato－ milts；and if，in Some parts of my Per－ formance，I（eem more Ludicrous than any eAuthor that has bitberto writ ont the Subject；jou＇ll find on due con－ fideration，$t$ is owing to a more exact Enquiry；and Curiosity is not eafily Satisfied in the depth of the ferrets
＊Differtation fur la Generation de L＇Homme．Par Monfieur Dionis，Paris 1697.

## $i_{V}$ The Preface.

of Nature. And I hope what I have mention'd from a Learned Cafuift, + will be a sufficient Antidote against the unlareful use of thole curious Parts I have to particularly defcribed; as an eAddition to wobich I farther recommend a small Treastile (not long since publifh'd,) Entitied, Essays relating to the Conduct of Life, which contain Suficient and eafy Inftrutions for a regular OEconomy, not only where the Pafions are prevalent, but in all the ViciJjitudes incident to Wuman Nature.

In the Writing of this small Work I carelefly omitted a material crutiny of a Paragraph in Onania; Page 16. Says this Author, 'lome 'Women are with held from being - Proftitutes by their covetonfuefs
$\dagger$ Traite de l'Impuritie. par Monfieur ofervald.

# The Preface. 

6 only: Others for nothing elfe, but - the fear of Difeafes, or the having - of Children. Lascivious Widozes, 6 who underftand the World have ${ }^{6}$ reason to Scruple Second Marriages 6 on many accounts; Some love their 6 Liberty; others their Money; and ' if they value their Reputation, - they'll not dare to venture on un-- laveful Embraces ; webereas in Self' pollution, neither the Cautious, ' nor the Covetous imagine that they ' have any thing to fear. I take it that this very plainly encourages the Sin of Self-pollution, if I may be allowed to deduce the Consequences of the latter from the former; for be fir $\operatorname{Jays}$ rightly, that unlareful Embraces are injurious to Reputations; but then infinuates that Self-pollution may be practis'd without any apprebenfions. This and many other parts of bis Treatise, demonstrate his Viere to be the Sale of his Medicines, though with a great deal of Cant be pretends the contrary; be.

## vi The Preface.

fudes the very tacking of bis Apothe-carys-fhop, to bis ftupid Performance, without any farther confiderations fufficiently beres his real Intentions. And I am fo far from imzitating this ignorant Empirick, that the only Red medy I prefcribe, is that Infallible Specifick, in every ones power, Chastity.

ONANISM

# ONANISM DISPLAY'D. 

## Introduction.

7 HE Author of a late Pamphlet entitled Onania has by a Bundle of Theological Phrafes, Scripture Quotations, and an affected Simplicity, attempted to poffefs the World with an Opinion, that his Defigns in publifhing that Treatife, were meerly with fpiritual Views, and out of a tender regard to the prefervation of the Healths and Conftitutions of the degenerate part of Mankind, with-

B
out any the leaft Mercenary Expectations ; and fince it may poffibly bear this Conftruction with Perfons carelelly perufing his Performance, and the ignorant Multitude: I fhall make it my Bufinefs to fet forth the Abfurdity, inconfiftency, and impofture of this fupercilious Scribler in every part; to prove that his Treatife tends to the encouragement of Lewdnefs and Debauchery ; that his own Medicines promote the very Sin , he, for Intereft fake, takes upon him to Difcountenance; and to demonftrate, that he is really ignorant of what was the Crime of Onan. But I fhall premife that my Scheme is no ways calculated to propagate any manner of Uncleannefs, but on the contrary todifcourage the practice of felf pollution, by illuftrating the Sin more particularly; and enumerating more extraordinary Inftances than hitherto any Author has done on the Subject.

## (3)

I agree with this Author in the Opinion of the Divine he has quoted, that Self-pollution is a Crime in it felf, monftrous and unnatural; its Practice filthy and odious, its Guilt crying, and its Confequences ruinous: It deftroys conjugal Affection, perverts natural Inclination, and tends to extinguifh the hopes of Pofterity; but I take leave to obferve that the Author of ONANIA is egregionfly miftaken in fixing this Crime upon $O N A N$, as I shall inconteftably prove when I have gone thro' my Examination of his trilling Performance, which I purpofe to do with all the exaCtnefs imaginable.

And firft, in Page 14. After fetting forth Ignorance to be the firft caufe of Self-pollution, this Author goes on and tells you, that the fecond is the fecrecy with which Self-pollution may be committed: All other Actions of uncleannefs (fays he) mult have a Witnefs, this: needs none. Some B 3 luftful.

## $(4)$

Iufful Women of fenfe, have made all the outward fhew of Virtue and Morality that can be requir'd ; they have had prudence enough, in the midft of ftrong Defires, to refufe difadvantageous Matches, and yet have abandon'd themfelves to this Vice, when at the fame time they would rather have died than betray'd a weaknefs to any Man living, as afterwards, becoming Penitents, they have confeffed themfelves. And again fome young Men of vicious Inclinations, have either naturally, or for want of a liberal Education been fhame-fac'd to excefs ; they have not dar'd to look upon a Woman, and their Bafhfulnefs has fecur'd them from every act of Impurity but this. From all which it is evident that the fecrecy of this Sin, has betray'd many into it, whom hardly any thing elfe would have tempted.

In anfwer to this, tho' it muft be confefs'd that fecrecy in fome meafure promotes this Vice, yet Igno-

## (5)

rancearid the want of a liberal Education can in no refpect be conftru'd to have an equal Effect : An ignorant Perfon may be rationally prefum'd to be lefs influenc'd by impure Imaginations, than a Perfon of a tolerable fhare of Senfe ; his Ignorance may be fo extenfive, as to cloud all manner of Enjoyments, and allow him no Thoughts of purfuing imaginaty pleafures; whilft the Man of fenfe is perpetually devifing new Diverfions, and proportions his Enjoyment to the extent of his Capacity; be vigoroufly purfues the Tracts of Lewdnefs and Debauchery, and is reftlefs and uneafy, until he has acted in all Scenes, and gone thro' the utmoft variety of brutal Enjoyments; this I take to be highly confpicuous in the Rakes of the Town, wlo are frequently Perfons of fprightly Wit, and endu'd with no fmall fhare of fubftantial Senfe.

And as for the want of a liberal Education, I cannot eafily guefs at the

$$
\text { B } 3 \text { meaning }
$$

$$
(6)
$$

meaning of the Author, unlefs it be the want of being train'd up in the Hundreds of Drury, it being very certain that in a Scholaftick Education, the perufal of ludicrous Authors, which all Youths of Spirit are fond of making choice of for their Studies, excites them to uncleannefs infinitely beyond Ignorance ; and that the want of Education fhould occafion fuch an invincible Bafhfulnefs, as to deter a Perfon from looking on a Woman, is fuch an impofition upon the illiterate part of Mankind, which make up at leaft three Parts in four of the Creation, that nothing can be like it, when we confider that the Enjoyment of a Woman is fo natural, that no bounds of Shame will confine it, and that Perfons in all other Refpects modeft, have a ftrong propenfity to copulation, and cannot conquer this palfion, like others more vifible to the World, by Shame or any other means.

Shame

$$
(7)
$$

Shame I take to be more a defect in Nature, and want of Refolution to act in Publick, than to difcourage the private Amours of Youth, which by a due management may be eafily carried on with fufficient fecrecy: And we oftentimes find a bafhful Perfon more inclinable to Vice than the Man of affurance, tho' he fupports the Character with more Hipocrify; his Intrigues are carried on with an entire fecrecy, and he can enter upon his Lewdnefs with an air of Gravity and Innocence, when the Sinner of Refolution as frankly owns his Experience, as he commits the Crime. But to go on with this Author, in pag . ${ }^{17}$. He fays, it is the general Opinion, that the fhamelefs are the worft of People, yet fhame when ill plac'd, has often wrought worfe Effects, than the reverfe alone has been able to produce. When a Baftard Infant is found Dead, and the Mother, lately deliver'd without Witnefs, is not able to prove cither

$$
(8)
$$

that fhe had made Provifion for it, or during her pregnancy imparted the fecret to another, befides the Father, our Emglifh Law, without any other Evidence, prefumes the Woman to have murder'd the Child. From whence it is evident the Legiflators muft have fuppos'd that tome Women may have cruelty enough to commit the moft unnatural Murder of all, and at the fame time want Courage to bear fhame.

This penetrating Author does not conlider, that 'tis not fo much the want of Courage to bear a prefent fhame, as to prevent a future expence in the maintaining and breeding up a Child, which moft commonly occafions thefe unnatural Murders; and where a Crime of this Nature can be perpetrated with fecreey, fo that the guilty Perfons may come off with impunity, I take it that in all Cafes the incumbrance is more confider'd than the fhame.

## (9)

I am not of his Opinion in Page 18. that Women are equally immodeft with Men, and that Cuftom and Education only prevents their fhewing it. For in the Infancy of Children, before the force of Education can poffibly take place, or fenfe prevail, as a Guide to their Actions, we frequently find an abounding Modelty in the Female, and a large fhare of Boldnefs in the Male, produc'd from the fame Loins, and this I have obferv'd is generally the Cafe, which can proceed from nothing but Nature.

And in Page 19. fays this Author, if Children were ftrictly forbid never to touch their Eyes or Nofe, but with their Handkerchiefs, and that only upon very urgent Neceffities; if likewife they faw every Body comply with this Cuftom, and it was counted abominable to touch them with their naked Hands, I can't fee why this might not be as fhocking to them when grown up, as now the moft

$$
(10)
$$

moft guilty Denudations are to well bred People. Now this curious Obfervation upon the efficacy of Cuftom being introduc'd in a Paragraph treating of Modefty and Chaftity, I appeal to all Perfons of any fenfe or difcernment, whether it does not imply, that all Modefty and Virtue is eftablifh'd only by Cuftom, and whether it does not entirely deftroy the notion of an innate Principle. This concludes his firf Chapter, and I take it to be very evident, that under a Cloak of Divinity, this Author nily propagates Doctrines fatal to Religion, and highly reflecting on the Reputations of the Virtuous.

Chap. II. Page 25: In Women, he fays, Self-pollution, if frequently prdCtis'd, relaxes and fpoils the retentive Faculty, occafionsthe Fiuor eAlbus, an obnoxious, as well as perplexing illnefs attending that Sex, which upon account of the Womb, may draw on a whole Legion of Difeafes; among other diforders, it makes them

## ( II )

look pale, and thofe who are not of a good Complexion, fwarthy and hagged. It frequently is the caufe of Hyfterick Fits, and fometimes by draining away allthe radical Moifture caules Confumptions. But what it more often produces than either, is Barrennefs, a misfortune very afflictive to them, becaufe feldom to be redrefs'd; He feems to make very little difference between the fatal Confequences of Self-pollution in either of the Sexes, when it mult be allow'd to be great, on duly confidering the fituation of the parts; the Male can with abundantly more eafe effect a titillation on his external Tefticles, than the Female facilitate the leaft pleafure in her Womb; and as the difficulty is greater, it muft deter a conftant practice, and confequently not be attended with Symptoms, equally direful. And I doubt not, but this Author would much rather fee a Legion of Gallants waiting upon a Female, than one fingle

$$
(12)
$$

aft of Self-pollution, his Intereft being more nearly concern'd in the vending of his Venereal Medicines. Agreeable to this, in Page 46. Treating of Repentance, he goes on, it is not enough for Youth to renounce their Crime, without renouncing likewife all the approaches to it. All the feveral fpecies of Impurity, and the defilements of either Body or Mind, all lewd Actions, wanton Glances, impure Thoughts and Defires, together with fuch familiarities as expofe to Temptations, all obfcene Difcourfe or Expreffions, and which are contrary to Chaftity. It is true this Renunciation may appear difficult at firft, and will occafion no fmall trouble to thofe that have contracted a vicious Habit, of giving themfelves up to all forts of Paffions: But People muft couragioully refolve to overcome themfelves, it being far better to deny themfelves in thofe Things, and to crofs their own Inclinations for a time, than by purfuing

## (13)

fuing them to perifh eternally. It is profitable that one of their Members phould perifh, and not that their wohole Body ghould be caft into Hell. The tacking of this Quotation from Scripture, by a difpenfer of Medicines, pretending only to cure Veneriàl Maladies, feems véry plain and demonftrable to be done with a defign of increafing Whoredom and Fornication, at the fame time he pretends to lafh the Crime of Self-pollution; what he can otherwife mean by the perifhing of one Member, is to me a myftery; and in many other parts of his Treatife he flily infinuates Notions and Comparifons no way coherent, to promote his Profeffion of Quackifm. In Page 54. After he has incerted a pretended Letter from a Young Gentleman in the Country, fetting forth the dreadful Miferies he labour'd under thro' a frequent practice of Self-pollution, viz. repeating it eight Times an hour; our Au=

$$
\text { ( } 14 \text { ) }
$$

thor folemnly declares, that he concluded this Letter with requefting his Advice, and informing him that he never carnally knew any Perfon (I fappofe meaning neither Man nor Woman) or defil'd himfelf otherwife, than by Self-pollution. Setting afide the very great fufpicion of this, and the reft of the Letters in this Treatife being forg'd, thete being no Names of the Writers, to whom directed, or any Dates to them, the Author Acts very inconfiftently, in not fetting forth the conclufion of the Letter relating to carnal knowledge in the Letter it felf, but inftead thereof, he impofes upon the World, his own Affirmation, as the only Authority. If he be himfelf the Author of thofe Letters, as I fuppofe he may, indeed it has equal fanction from his own Mouth delivet ${ }^{\circ} d$ at another time, but if he be not the Inventer of thofe Bundles of Nonfenfe, certainly the Genuine Letter ought to be incerted verbatim to the end.

## (I5)

And why he mentions that part of the Letter at all, unlefs it be withaz fecret Defign of propagating other uncleannefs more deteitable as it buings a double Guilt, I cannot well underftand, fince he no where takes notice of the calamities attending Whoredom and Fornication, tho ${ }^{3}$ the Crimes are often repeated.

Towards the Conclufion of this Treatife, in Page 74. The more eafily to impofe upon the publick, a folemin Declaration is made, that he neither, bas, or ever defign'd to have the leaft Intereft or fhare in the Profits, that now are, or hereafter may accrue from the fale of the Medicines; this feems to be an Evafion equally contriv'd to any of the foregoing; is it not eafy to imagine, that, (tho' his Performance is compos'd of Aupidity) he is not himfelf the Author, even of that? And that this is not his Declaration, but that of the Writer of his infipid Treatife; and whether this be not a natural

$$
\mathrm{C}_{2} \quad \mathrm{Con}_{-}
$$

## ( 16 )

Conftruction, I fubmit to the Determination of all impartial Readers. There are feveral other Fallacies and Impoftures, which might be trac'd through his trifling Performance, but I fhall content my felf with the particulars I have already examin'd : And as in Page 63. He mentions the Advice of Boccalini, given as an Antidote againft Whoredom, viz. that Perfons that way inclin'd fhould carty about with them, a well drawn Picture, of the moft perfect and faultlefs Beauty that ever appear'd in Flefh and Blood, pencil'd over again with rotten Teeth, blear Eyes, and Nofelefs; and that whenever Defires of the Flefh Atir, they would take a fober View of it, and ferioully confider what they are about to do, and the Confequences, which no doubt would damp their Inclinations. I fhall infert fome particulars of this nature, which will give a more lively Idea of the Folly and Madnefs, and more effectually deter

## ( 17 )

a purfuit of carnal Pleafures from Sir Roger L'Eftrange's Tranflation: of Queviedors Vifions.

In the fifth qifion of the World; a Dialogue is begun between a Young Libertine, and a grave Old Gentleman ; 'fays the Libertine, Gthere paft by a Lady of Pleafufe, 6 of fo excellent a Shape, and Garb, 6 that it was impoffible to fee her 5. without a Paffion for her, and no ${ }^{6}$ lefs imponfible to look upon any4 Thing elfe fo long as fhe was to - be feen: They that had feen her. 6 once, were to fee her no mote; ${ }^{6}$ for fhe turn'd her Face fill to new. © Comers: Her Motion was grace4 ful and free, one while fhe'd ftare 'iye full in the Eyes, under colour - of opening her Hood, to fet it in "better order: By and by fhed fteal ' a look at ye with one Eye, and a 6 fide Face, from the corner of her 'Vizor ; like a, Witch that's afraid? ' to be known when the comes from

$$
\mathrm{C}_{3}+{ }^{2} \text { Cat- }
$$

## (18)

${ }^{6}$ a Catterwal ; and then out comes ${ }^{6}$ the delicate Hand, and difcovers 6 the more delicious Neck and ${ }^{6}$ Breafts, to adjuft the Handkerchief ${ }^{6}$ Or the Scarf; or to remove fome ${ }^{6}$ other grievance that made her Ladyfhip uneafy. Her Hair was moft ' artificially difpos'd into carelefs Rings ; and the beft Red and ${ }^{6}$ White in Nature was in her Cheeks; if that of her Lips and Teeth did not exceed it. In a ' word, all fhe look'd upon were her own; the Old Man oppofing this 6 Romance ; fays the Young Gentle6 man, he muft be either Blind or 6 Barbarous that's proof againft the Charms of fo divine a Beauty; nor would any but a Sot let flip ' the bleffed opportunity, of fo fair ' an Encounter; that he that has her, 6 has all that's lovely or defirable in ' Nature: What lightning does fhe 6 carry in her Eyes! W hat Charms and 6 Chains in her Looks and Motions, ' for the very Souls of her Beholders!

## (19)

6 Was ever any Thing fo clear, as ${ }^{6}$ her Forehead? Or fo black as her 6 Eye-brows? One would fwear that 6 her Complection had taken a 6 Tincture of Vermillion and Milk : 6 And that Nature had brought her 6 into the World with Pearl and ${ }^{6}$ Rubies in her Mouth, to fpeak all ' in little, fhe's the Mafter-piece of 6 the Creation, worthy of infinite 6 praife, and equal to our largeft 6 Defires and Imaginations. 6 Here the Old Gentleman inter${ }^{6}$ rupted the Young Libertine, and 6 told him he was a Man of much 6 Wonder and fmall Experience, ${ }^{6}$ and deliver'd over to the Spirit 6 of Folly and Blindness. The Truth ${ }^{6}$ of it is, faid he, that this prodigi-
6 ous Beauty of yours, hires all by 6 the day; and if you did but fee 6 this Puppet taken to pieces, you ${ }^{6}$ would find her little elfe but Paint 6 and Plaitter. To begin her Ana6 tomy at the head; you muft know ' that the Hair fhe wears, is bor' row'd

$$
(2 a)
$$

6 row'd of a Tire-Woman, for Ther² ${ }^{6}$ own was blown off by an unlucky 6. Wind from the coaft of Naples; ${ }^{6}$ or if fhe has any left, fhe keeps ${ }^{6}$ it private, as a Memorial of her ${ }^{2}$ 6. Antiquity; fhe is beholden to the 6 Pencil for her Eye-brows and Com' plection : And upon the whole 6 matter fhe's but an old Picture re-' 6 freflot; 'all that you fee of her that's 6 good, comes from diftill'd Waters' 6. Effences, Powders, and the like; ' and to fee the wafhing of her Face
' would fright the Devil : She a-
6 bounds in Pomanders, fweet Wa -
' ters, Spanifh Pockets, perfum'd' ' Drawers' and all little enough 'to qualifie the poifonous Whiffs fhe 6. fends from her Toes and Armpits, "which would otherwife out ftink 6 Ten Thouland Pole-Cats: She ${ }^{6}$ cannot chufe but kifs well, for her ${ }^{6}$ Lips are perperually bath'd in Oil ' and Greafe ; and he that embraces - her, fhall find the better half of her 6 the Taylors, and only a fuffing of

$$
(21)
$$

- Cotton, and Canvas to fupply the 6 defects of her Body. What do ' you think of your ador'd Beauty ' now ?

And in another place of the fame Author, the following account is given of a Vifit to ill-favour'd Women; ' fome had their - Faces fo pounc'd and fpeckled, as ' if they had been fcarified, and ' newly paft the cupping Glafs; with ' a World of little Plaiters, long, ' round, fquare; and briefly cut out ' into fuch variety, that it would ' have pofed a good Mathematician ' to have found out another Figure ; ' and you would have fworn, that ' they had been either at Cats-play ' or Cuffs: Others were fcraping their ${ }^{6}$ Faces with pieces of Glafs; tearing ' up their Eye-brows by the Roots 6 like mad; and fome that had none ' to tear, were fetching out of their
' black Boxes, fuch as they could
' get or make: Others were poudring
' and curling the falfe Locks, or faft-

- ning

$$
C(22)
$$

${ }_{6}$ ning their new Ivory Teeth in the place of their old Ebony ones:
6 Some were chewing Limmon-peal
' or Cinnamon, to countenance a. ${ }^{6}$ foul Breath; and raifing themfelves - upon their Ciopines, that their 6 View might be the fairer, and their ${ }^{6}$ fall the deeper: Others were quar6 relling with their Looking-glaffes,
6 for fhewing them fuch Hags couth-
${ }^{6}$ tenances; and curfing the State of
6 Venice, for entertaining no better
6 Workmen; fome with their Hogss 'greafe and Pomatum, were fleeking.
6 and polifhing their Faces; and in6 deed, their Fore-heads were bright ${ }_{6}{ }_{6}$ and fhining, though there were nei6 ther Suns nor Stars in that Firma' ment: And others were daubing ' one another, to take away the' 'Heats and Buboes; fo far does a ' Woman's Wit and Invention car${ }^{6}$ ry her, to her own Deftruction. And in another Vifion lewd Women are jutly call'd, the Devil's Factreffes.

## (23)

This is a fmall Digreeffion from my Subject, but as I was naturally lead into it, by the Treatife I liave been examining, and it may tend to the difcouragement of unlawful Pleafures, I hope it is excufeable. I now proceed to fhew that the Author is miftaken in the Sin of ONA NT, and to demonftrate what was really his Crime.

## C H A P. I.

Of OnAn's Crime; and the Sint of SElf-POLLution.

H E Text of Scripture runs thus. And Judah faid unto ONA N, Go in unto thy Brotber's Wife, and Marry ber, and raije up Seed to thy 'Brother. eAnd O N A N knere that the Seed Gould not be bis; and it canie to pafs, when be went in untobis 'Brothers Wiffe, that be fpilled it ou the Ground, left that be floonld

$$
(24)
$$

give Seed to bis Brother. 38. Chap. Genefis, Verfes 8, 9, 10.

Though fome Authors feem to make ONAN's chief Crime to be Self-pollution, yet the learned Bifhop Patrick, in his Commentary upon the $38 t h$ Cbapter of Genefis, is of a contrary Opinion, viz.

- Verfe 8. Go in unto thy Bro6 ther's Wife. This was an ancient ${ }^{6}$ Cuftom in force by the Law of ${ }^{6}$ Mofes, which only exacted what ' had been formerly practis'd, viz. ( that when a Man died without - Iffue, his next Brother fhould 6 Marry his Wife. Deut. 25. 5.
' And raife up Seed to thy Bro' ther; is meant preferve thy Bro' ther's Name and Family, by be' getting a Child, which may be ac-- counted his, and inherit his Eftate. ${ }^{6}$ For fo the Law was, that the firft ${ }^{6}$ Born of fuch a Match, was not to 6 be look'd upon, as a Child of him ${ }^{6}$ that begot him; but as his Bro' ther's,

$$
(25)
$$

* ther's, who was the Mother's firft 6 Husband; though all the following ${ }^{6}$ Children were to be his own. 6 Verfe 9 . On an knew that the - Seed fhould not be accounted his in ${ }^{6}$ the firft Born, but bis Brothers. 6 And leaft the Child fhould be born ${ }^{6}$ in the Name of his Brother ; v. 10. - The Thing which be did difpleafed ${ }^{6}$ the Lord. This made the Sin the 6 more heinous, that he acted againft 6 the divine Promife made to eAbra6 bam, concerning the multiplying 6 of his Seed.

6 The contraft of Marriage was 6 fo underftood in thofe Days, that 6 if the Husband died without Iffue, 6 the Woman was oblig'd to Marry 6 his next Brother, and as long as any 6 of his Brethren remaind, they ${ }^{6}$ were bound to Marry his $W$ ife, ${ }^{6}$ and preferve their Brothers Me 6 mory, or folemnly renounce, to 6 their very great Infamy, This 6 was fo well known, that no new ${ }^{6}$ contract was enjoyn'd in fuch a

$$
(26)
$$

- Cafe ; for the firft Husband being dead, fhe and the next Brother were Man and Wife, without any
6 farther Agreement or Ceremony,
6 by Virtue of the Original Law.
The learned Prelate in this Comment, omits mentioning the fpilling of the Seed, but it may be rationally prefum'd he did it not fo much out of a regard to Modefty, as its being a trifling part of the Charge againft OnAN; fince hedetermines On A N's great Crime to be his not complying with the Law of Mofes, in the Marriage of his Brothers Wife ; tho ${ }^{\circ}$ he adds, that his Sin was the more heinous for his acting contrary to the promife made to eAbraban, in relation to the multiplying of his Seed.

What provokd Onan to the Breach of this Law, I take to be evident, was his not being allow'd the Reputation of begetting the firft Child on his Brothers Wife, which

## (27)

in all Marriages is attended with more fatisfaction, than any of the future Progeny.

There might be other probable Reafons given for On A w's breaking this Law of Mofes ; as envy to the Memory of his deceas'd Brother, dellike or prejudice to his Wife, छoc. But to Comment a little farther upon the 38 Chapter of Genefis, in refpect to OnAn's Crime, it may not be amifs to examine fome preceding Verfes.

Verfe. 2. And Judah faw there, a Daughter of a certain Cananite, zebofe Name was Shuah; and be took her, and went in unto her. cand he conceiv'd, and bare a Son, and be call'd his Name Er. By this, and many other parts of the Scripture it is apparent, that the Words going in unto a Woman, were meant in thofe times actual Copulation, fo that when ONAN went in unto his Brother's Wife, it muft be conftru'd, that he began

D 2

$$
(28)
$$

the pleafure of Matrimony, though, he did not perfect it by reafon he fpilt his Seed on the Ground ; that is, he withdrew from his Brothers Wife, and did not confummate the Marriage; which difpleas'd the Lord, wherefore he flew him.

Agreeable to this in fome meafure, is the modern Cuftom amongft Perfons of diftinction in their amorous Intrigues; who after they are actually ingag'd in the pleafures of Vemus, by a fudden ereption of the Privities, feparate from the Female the inftant they feel the Titillation in the extreme Parts, and before the Emiflio Seminis ; to prevent the effects of a teeming Womb, which would not only oscafion a confiderable expence, but expofe the Female, and very much impair the Beauty of her Form. And of this nature, I take the $\sin$ of Onan to be, in relation to his fpilling his Seed on the Ground, though not committed with the fame defign.

$$
(29)
$$

There particulars fully flew, that ONAN's Sin was not Self-pollution, as laid down by the Author of ONANIA, and for that he had the Affiftance of his Brother's Wife. I come now to the Sin of Self-pollutimon, and begin with the Caufes. I am by no means of the Author's Opinion, that Self-pollution is entirely occafion'd by Ignorance, Secrecy, Shame, or other particular Cafes mention'd in his Treatife, as I have already obferv'd, with my Reafons confuting the fame; to which I may add, this farther, that few, or no Perfons can be ignorant, that Self -pollution is a Sin. I look upon it to be more a natural Diftemper occafion'd by a vicious ferment of the Blood, than to proceed from any of the Caufes fer forth by the Author of Selfpollution, and that this may be agitated by lewd Company, Obscene, Pictures, Ec. It is impoffible, that ignorance can encreafethis Crime, when it is effeem'd the Mother of Devotion, and in my

## (30)

Opinion, the firmeft limits to Chaftity. Without fome experience, no confiderable progrefs can be made, and 'tis the higheft inconfiftency to call an experienc'd Perfon ignorant.

Other Caufes of Self-pollution, I take it may be juftly attributed to the very great hazards Young Gentlemen are conftantly exposd to with Women of the Town (not that I allow any unlawful defires) for tho' the Crime of Self-pollution be in its nature heinous, and the Confequences are to be fear'd by all confiderate Perfons, yet theSin doth not inany refpect feem fo dreadful to vigorous Youth, as that of Whoredom, and the Calamities attending, are generally more remote in profpect. A Clap or a Pox will imediately enfue in the moft terrible manner (the Beauty of the Front, and the moft valuable parts of the Body, being particularly in danger) in the cafe of Copulation with an unfound Woman, when the confequences of Self-pollution only

$$
(31)
$$

fteal on you by degrees, and will be a confiderable face before the direful Effects fhall be vifible: This I take to be a principal Caufe of Selfpollution, efpecially where Perfons have fuffer'd in their Intrigues with lewd Women; and what encreafes it in this cafe, is the pernicious Salt of a tranfmiffive Nature, oftentimes remaining in the center of the Blood, upon taking unbounded quantities of Mercurial Preparations; fome Young Gentlemen have confefs'd to me, that after the cure of the fecret Difeafe by Quack-phyficians, their Inclinations have encreas'd, with the number of their venerial Maladies, which can proceed from no other caufe than a pollution of the Blood occafion'd by the Dregs of ill prepar'd Medicines.

I have known two very remarkable Cafes of this kind in the Country. One was a half witted young Fellow, being with artifice entic'd to the act of Fornication with an unclean Woman, who after a cure of the Difeafe he

$$
\left(3^{2}\right)
$$

receiv'd by her, was fo ftrangely addiated to Self-pollution, that at length there was far greater difficulty to preferve his impair'd Carcafs, than in curing of his naufeous Diftemper, notwithftanding, he had it with feverity: He would fit down upon the Floor, and with Eyes lift up violate Nature in a feeming Tranfport, and oftentimes repeat this unnatural Sin, with an uncommon pleafure: At laft he confefs'd it, and on a private Examination declar'd, that he never had any inclination to Selfpollution, before he had receiv'd his venerial Injury, and largely taken of the Surgeons Preparations, tho this Woman was not the firf that he had carnally known. The other Cafe within my knowledge, was, that of a rakifh Young Gentlemen, who having run through his Fortune in Extravagancies, particularly on the fairSex, when he could no longer fiplendidly fubfift, orafford the expence of unlawful Pleafures, being perpetually tormented

## (33)

mented with a violent inclination to Women; at laft after a long continuance of Self-pollution, he couragioufly Caftrated himfelf, as the only cure of his vicious A petite. But the next News I heard, as indeed I expected, was, that he had with equal refolution fhot himfelf through the Head.
'T is very certain, that Perfons in mean Circumftances, are thereby in many Refpects renderd unable to purfue their darling Vices; but where the Principles are vitiated, or the Paffions prevalent, there is no Shield of Self-defence againft ill Actions: The Perfon wholly void of Honefty, will commit Thefts and Robberies upon the Perfons of others to enrich himfelf; and the luftful Perfon will fatisfy his Brutal inclinations by Friction, or other abominable Enjoyments, for want of ability, to purchafe more acceptable Crimes : And as the want of Circumitances is many times a caufe of Self-pollution,

$$
(34)
$$

tion, fo the Perfon in poffeffion of a large Fortune, is frequently guilty of the Sin of Whoredom, accompanied with more dreadful Confequences, and Nature only, under the fevereft Difcipline, muft in all Cafes regulate the luftful Appetite.

The defign of providence, for the prefervation of Mankind in a State of Innocence, is vifible throughout all the works of the Creation; there is no condition of Life, but a Perfon may go thro' free from Guilt and Infamy; and particularly in Uncleannefs, Nocturnal-pollution proceeding meerly from Nature without force, is certainly intended to correet lufful Inclinations; hut when it arifes from vicious contemplations, and impure Ideas conceiv'd in the Mind, it is a finful $A C t$, though not equally criminal to Self-pollution.

Pollution by the hand of a Woman, is always attended with more fatal confequences to the Man than any other; the impure Thoughts
(35)
are more ftrongly imprefs'd by the prefence of the Female, than its polfible in her abfence, and the imaginations fo heighten'd by her Touch, as to commit the greater violence on Nature. By this, the parts are more confiderably ftrain'd, and their natural Strength and Vigour abated. This naturally leads me to the various ways of Self-pollution in wanton Females, which are fo intollerable, that Modefty forbids a particular Defcription. I fhall only mention, that a Lafcivious Woman, by the ufe of a pleafurable Toy, and an injection of Milk, or other Moifture, may poffibly continue Self-pollution for alonger fpace than copulation with a Man, no Spirits being drain'd or Strength exhaufted by the means herein applied; and 'tis reported that fome lewd Females will commence this vile practice, before their Privities are fledg'd with Maturity.

## ( $3^{6}$ )

To demonftrate the confequences of a lewd Converfation in regard to the Crime of Self-pollution, I Shall here prefent you with an ample account of a Club of Young Gentlemen, I have been inform'd, was not many Years ago eftablifh'd in, or near Long-acre; the moft abominable Nurfery of Lewdnefs and Debauchery, perhaps, that ever was heard of in any Country, unlefs it be in the remote parts of Europe amongft the vile Sects of inceltuous Adamites, whom Hiftories mention, when the Words increafe and multiply, were repeated in their religious Service (which was very common) they immediately extinguifh'd their Candles, and promifcoufly mix d in carnal Enjoyments. This Club 'tis faid, was held thrice a Week at the Houle of a noted Victualler, who was a Stranger to the Actions of his Guefts for a confiderable time; they had a Supper and plenty of ftrong Liquors conftantly

## (37)

ftantly provided to their no fmall Expence ; they were govern'd by a Prefident of the Night, who was commonly elected after Supper, and the whole Affembly ftruggled for this Honour: The method of Election was thus'; every one according to his Seniority advanc'd himfelf in turn upon a high Jointftool plac'd againft a Wall, and with a fort of Emulation, there practis'd Self-pollution as long, as his ftrength would permit, and hethat repeated the Sin the greateft number of times, -was immediately declar'd their Chief for the next time of meeting: And to facilitate their unnatural Pleafures; their Eatings generally confifted of ftrong Soops, Gravies, Filh, Jellies, and other provocatives to Luft; and their whole Converfation turn'd on their Excellency and Perfection in this moft deteftable Crime. This Account I have had of this Club, with this Addition, that a Member of it, might be known by his (pindleShanks, E fallen

$$
(38)
$$

fallen Jaws, and pale witherd Countenance, but as it is not within my own knowledge, I cannot aver it to be fact, and to me it feems fo monftrous as not to be credited in the whole, what ever it may in part; however I thought fit to infert it, to render the Crime the more odious and hateful to all.

And to this I may add other pernicious Confequences proceeding from this Crime, as an irrecoverable Impotency, which renders a Man inanimate, intoxicates his reafon, and debafes Nature, fo as to occafion the Diabetis and other fatal lingring Difeafes; for the aliment of the Blood is fo far vitiated and impair'd by a, frequent repetition of this Sin, that it is wholly unable to perform its office of Circulation with any regularity.

Thus I have detected the feveral Fallacies, Inconfiftencies, and Impofitions of the Author of ONANIA; provid that he is miftaken in the

Crime

## (39)

Crime of ONAN ; that the defign, of his Book was to encourage Lewdnefs, and thereby promote the fale of deftructive Medicines, which many times occafion a conflux of Humours, and incurable Difeafes ; fhewn that Quack Preparations promote the very $\sin$ he with views of Intereft pretends to difcountenance, fet forth the real Crime of Onan, and the Caufes and fatal Confequences of Self-pollution: I now proceed to the heinoufnefs of the S In.

E 2
CHAP. II.

## $(40)$

## C H A P. II.

The Sin of Self-Pollution, the means to avoid it, and to attain CHASTIT .

## $T$ Hi E Learned Ofzervald treating of the reveral Species of Uncleannefs, fays it is eafy to difcern

 " that impure Actions are forbidden- for two Reafons. Firft, becaule

6 they are likely means of carrying
${ }^{6}$ Men to the groffer Crime: Poo'ple don't ordinarily arrive at the - height of Wickednefs all at once, 6 but by certain Steps and Degrees. 6 They begin with what they think - lawful ;

## (41)

6 lawful; they accuftom themfelves - to violate the rules of Chaftity in - fuch Inftances, as they perfiuade - themfelves, can have no great hurt 6 in them : But then from thefe lef-- fer Offences, they proceed to others, ' whofe Wickednefs they cannot but ' be fenfible of; and fo at length - they fall into the more horrid - Crime. But in the fecond place, - though we fhould never come thus - far, and our unchaft ACtions fhould ' never pufh us on to the uxmoft-- Licentioufnefs, they however de-- file the Soul; they increafe the - inclination to Uncleannefs, and - withdraw from God; as a very - little Obfervation will inform thofe, - who allow themfelves in thefe fort - of Liberties.

6 To impure Actions, may be fub6 join'd fuch Looks, as are contrary
' to Chaftity, inafmuch, as a Man
' may be guilty alfo of $\operatorname{Sin}$ in this.

- refpeat, whether in beholding factr
- Objects, or in reading fuch Books,

$$
\text { E. } 3 \text { as }
$$

## ( $4^{2}$ )

6 as may be apt to beget unlawful
6 Defires. It is an undoubted Truth, ${ }^{6}$ that impure Paffions are chiefly ${ }^{6}$ rais'd and inflam'd by the fight, 6 and that it is impoffible to continue ${ }^{6}$ Chaft without a diligent care to ${ }_{6}$ govern the Eyes, and to turn them 6 away from whatfoever might feduce ${ }^{6}$ the Heart. Let but any one en-- quire into the Objects I am fpeaking of, and the Impreffions they are apt to make upon the Mind, and this will prefently convince - him of the Evil and Danger of f fuffering his Byes to dwell upon - them: Thefe Objects pollute the 6 Imagination, filling it with luftful Thoughts; and it is only thtough - the Temptation of fenfuality, that 6 any can fix their Eyes upon them, 6 or take any manner of pleafure in ${ }^{6}$ them. The holy Scriptures fuff6 ciently caution againft thefe undue ' Liberties; it was by the fight 'that David was entic'd to commit ' Iniquity; And Fob, who liv'd at ' a time
(43)
' a tinte when moral Chaftity was - lefs known, than it has been fince, ' had yet learn'd, that the principal ${ }^{6}$ Duty of Chaftity was to regulate the Sight.

There are many Things conducive to Chaftity, as the pious example of Superiours, a Godly Converfa: tion, Books of Devotion, a firm Refolution, Temperance, $\mathfrak{E}^{\circ}$. And at all Seafons, Perfons ought to ufe their utmoft Endeavours for overcoming their inclinations to Impurity; but there are fome times, and opportunities, wherein it is done far more eafily than at others. In matters of Salvation, as well, as in all others, a great deal depends upon a choice of proper Seafons: No-body, but muft bave found, that he is not always equally well difpofed: Upon fome occafions a thing will appear almoft infuperable, which yet will not be foat another time: 'Take a Man given to any particular paffion,

## (44)

fion, and in the inftant, when he is feiz'd and tranfported with it : All you can fay to the contrary, will make no Impreffion upon him; yet take the fame Perfon out of his paffion, when his Blood is cold, and you will fee him very different. The Impure have their intervals, and thefe longer or fhorter, and more or lefs frequent, according as the Habit they have contracted is, ftronger or weaker; there are fome, over whom this paffion has fo great an Afcendency, that they are almoft perpetually employ'd by it ; yet fuch as thefe have fome more favourable Moments, wherein they are capable of reflection, and wherein their Paffion allows them fome refpite without oppofition.

But there is nothing to be done without Refolution and Confidence ; and we may be affur'd, that God's enjoyning of Chaftity, is an inconteftable proof, that People may attain it: It is by no means to be prefum'd

$$
(45)
$$

fum'd, that our great Creator, who is all Juftice, would under pain of Damnation command the obfervance of fuch Duties, as he knows to be entirely out of our power: No, there are means of performing what he injoins, not attended with unconquerable difficulties: And as it is he, who has ordered thefe means; fo has he engaged himfelf to fecond them with his bleffing, whenever we commence a fincere obedience to bis Laws.

It would be ftrange to find any make a Queftion of this; but it mult be granted, that as this Duty is not to be acquir'd with equal eafe at all times, fo it is not alike eafy to all forts of Perfons ; and fome find confiderable trouble in it ; and fo it is in all the other Duties of Morality: There are fome, who whether from their natural Tempers and Conftitutions, or from the bad Habits they have contracted, are violently prefs'd on to certain Paffions, and

## (46)

muft encounter Self-difficulties before they can make the leaft conqueft over them: An eagernels of Temper, and fullnefs of Heat, with an ill Habit too long indulg'd, will render Perfons fo prone to anger, that they muft be very diligent and watchful, and always upon their guard, or they will not be able to avoid it; but it will very ill become there to offer this for their excule ; for by this means, there is no Perfon but would be able to vindicate himfelf: So in a temporal Senfe, were Criminals allow'd to plead a ftrong inclination and pronenefs of Nature, to the committing of Crimes, there would be no fuch thing as Juftice or Government in the W orld.

Tho' many Perfons are ftrongly prefs'd to Impurity, yet it cannot be concluded from hence, that there are no methods of Prefervation from this Paffion: If they brought themfelves into this State by their own fault,

$$
(47 .)
$$

fault, and for want of ufing the means proper in order to Chaftity, this is no Evidence that thefe means are not fufficient for their purpofe : The Cafe is the fame here, as if a Man had fallen into a dangerous Indifpofition for not ufing certain Prefervatives or Remedies, which does not fhew that he had no means of preventing his Sicknefs, but only that he did not make a right ufe of them : Thofe who are entangled in this dangerous Paffion, and whofe return to Chaftity appears very difficult, may yet be affur'd, that they may recover themfelves: It is true, they may find it troublefome at firft, but then they ought to remember, that it is but reafonable for them to crofs their own Inclinations, and bear with fome inconvenience to preferve themfelves from fatal ruin : The trouble will daily leffen, and what at firlt feem'd infuperable, will become at length pleafant in the performance. There are certainly means

# $\left(4^{8}\right)$ 

of being Chaft, and whofoever makes the Trial, will quickly find the benefit of them: As for thofe that will not ufe them, who will do nothing to fortify themfelves, will not keep out of the way of Temptations, nor crofs their vicious Inclinations in any thing ; I confefs it is my Opinion, that they will never attain any degree of Chaftity, but then they have none but themfelves to blame for it; it is their own fault, and not any defect in Religion, thąt they are in this Condition: And to fuch the Almighty has ordain'd a proper Remedy, whereby to avoid the exceffes of the Flefll, which is Marriage.

Meditation is an excellent means to Purity, it excites and recalls into the Mind, divers good Reflections, and abates the force of Temptations: There is no matter of Religion and Piety, which may not be revolv'd in our Minds to advantage; and there are many particular Meditations, that have a peculiar Virtue for

## $(49)$

for diffuading from pollution; fuch as the prefence of our Creator, Death, Refurrection, Judgment, छic. The thoughts of Death, which puts an end to all our Enjoyments here, muft neceffarily abate the allurements of fenfual Pleafures. The thoughts of our Refurrection will force us to have a regard to Purity: And the thoughts of our Saviour's Sufferings, are a powerful Motive, not to feek our own eafe, and the fatisfaction of our Senfes in this World.

One of the chief means of defence againft Temptations to Impurity, is a diftruft of our felves. This diftruft proceeds from an Opinion and Senfe of our own. Weaknefs, and thereby a fear of being furpriz'd and enfnar'd by Temptations; diftruft will produce Vigilance, which is a fecond means of defence againft impure Thoughts. Perfons ought to be very exact and ferupulous, as to every thing that leads to Impurity,

$$
\mathrm{F} \quad \text { and }
$$

$$
\left(5^{\circ}\right)
$$

and not to take too great liberty under any vain pretences. Mortification and Exercife are very good guards againft Pollution; Idlenefs makes People wanton and vicious, and High-feeding very much heightens unlawful Defires. Curiofity is frequently a caufe of the wandrings of the Mind and Heart ; and a defire of fatisfying it, proceeding from a fecret Paffion, being a great occafion of Pollution, this alfo is to be guarded againft: And laftly, when Perfons are under any manner of Temptations, the inftant they are fenfible of impure Thoughts in the Soul, they fhould be ftrenoufly refifted. The firft reception of impure Thoughts into the Soul, fhews them to be pleafing to it; and the longer they are entertain'd there, the more this Pleafure encreafes; and when this Pleafure once prevails, the Man is no longer in a capacity to defend himfelf: And there is no furer way to prevent a Conflagration, than

## $(5 I)$

than by thoroughly extinguifhing the firft fpark of Fire, on its immediate appearance.

Thus much for the means to avoid Impurity, and to attain Chaftity, I fhall conclude this part of my Treatife, with what Mr. Oftervald obferves of the Sin of Uncleannefs in general, and with a few Reflections of my own, which may be of fervice to thofe, who make Chaftity a difficulty. 'All Uncleannefs is ' a palpable Violation of our Baptif' mal Covenant, wherein we have ' folemnly oblig'd our felves to re' nounce the Flefh (that is to fay, ' all fenfuality and voluptuoufnefs) ' as well as the World and the De' vil. For there is no living up to 6 this Profeffion and Obligation, ' without being continually upon 6 our guard againft all thofe finful ' Lufts, which we have thus re' nounc'd. And indeed; what an 6 affront is it to God, and what vile

$$
\text { F } 2^{6} \text { Trea }
$$

## (.52)

6. Treacliery and breach of Cove${ }^{6}$ nant, when Perfons have thus gi6 ven up their Names to Chrift, and ' promis'd to obey his holy Laws; 6. and in particular, to abftain from 6. all Impurity, if they fhall yet 6. draw back, and profeffing to know 6 the Almighty fhall in works de6. ny him, living in wantonnefs and 6. unlawful Pleafures, like the Gen6 tiles, who knew him not, or ra6 ther in füch deteftable Lewdneffes, ras the wifer amongft thefe would chave abominated ? We cannot 6. doubt, but that we are all ftrietly 6 engag'd to cleanfe our felves from 6. Filthinefs, both of Flefh and \& Spirit, and to perfect Holinefs. 6. And what a monftrous Incongrui-- ty mult it be, for fuch to indulge ' thiemfelves in any carnal and fenfu4. al Immoralities, in direct oppo-4-fition to the Vow, fo folemnly made ${ }^{6}$. againft them! This muft neceffa${ }^{6}$ rily argue a great Stupidity, and 6 regardlefsnefs of their Duty, which

## (53)

* is fufficiently blameable in any? ${ }^{6}$ but in Chriftians, who pretend ${ }^{6}$ to tread in their Saviour's Steps, ${ }^{6}$ and to obey all his Commandments, ${ }^{6}$ is moft exceedingly provoking.

Though the Sin of Uncleanners be heinous in it felf, as appears by what has been faid, and is oftentimes attended with a train of Crimes, as Lying, Quarrelling, and others of a flagitious Nature, yet are many Perfons fo eftrang'd to Religion, and even to rational Ethicks, as to be entirely fupine and negligent in the furpreffing of Impure Cogitations; and on the contrary entertain them with indulgence; fo that by degrees, illimitable Paffions are eftablif ${ }^{2} d_{\text {, }}$ and the tide of Impurity, at laft grows fo ftrong and rapid, that it is not to be repell'd; whence all marner of Evils fucceed.

Having Theologically difcuss'd the feveral particulars relating to: Selfpollution, and other Uncleannef: :

$$
\mathrm{F}_{3}
$$

$$
(54)
$$

Icome now to my laft head, treating of Generation, and the fenfitive Parts.effecting it; but I would by no means have my Reader think, that I examine thefe particulars with a defign to excite Perfons to Lewdnefs, when my Intentions are only to Thew the finenefs and Beauty of slee Parts, whereby will appear how eafly they may be violated and impain'd by an unnatural ufe.

CHAP. III.

## (55)

## C H A P. III.

A Dissertation upon Gene:ration ; and of the Parts admi. niftring thereunto.

I Thall begin with the inftruments of Generation in Men. All the parts of Generation merit the Title of noble Parts, as well as the Brain and the Heart; and fome Authors give them the preference before the other Parts of the Body, upon this confideration, that they preferve the Species, and the others only keep up the Individuum.

The

## (56)

The Yard is call'd by Phyficians the Membrum Virile, becaufe it diftinguifhes a Man from a Woman : It is plac'd at the lower and external part of the cAbdomen, and is faften'd to the Us Pubis. This Situation is the more commodious, for that it does not annoy any other part in the time of enjoyment.

It has a very peculiar Subftance, containing feveral Veffels, Mufcles, Nerves, Arteries, $E^{\circ} \mathrm{c}$. Its Skin is finer than that of any other part, to give it a more exquifite fenfe. It has no Fat; for if it encreas'd in Flefh in proportion with the reft of the Body; it would not only be of too large a fize, but become foft, unactive, and infenfible; and would cloud the Senfe neceffary to excite the Paffion.

The Yard performs its motions by virtue of four Mufcles ; two for Erection. and two for Ejaculaton. Thefelaft fqueeze the feminal Veficles, and convey the Seed into the Uretbra,

## (57)

from whence it fallies out with great force: It is divided into its Body, and two Ends; as for its two extremities one of them is call'd the Glans, on head of the Yard; the other which is faftened to the Belly, is call'd the Root, and is furrounded with Hair, efpecially upon its upper part, which is call'd the Pubis.

The Glans, or head of the Membrum Virile, is the only flefhy part in the Yard; being foft and fmooth, to prevent its hurting the Matrix of the Woman, and running in fome: meafure to a point to facilitate its Entry: It is cover'd with a thin Membrane, which renders it fenfible of the Titillation occafion'd by rubbing upon the Matrix; and in the time of Erection, the Spirits and Blood repair to it vigoroufly, when it fwells and ftarts out of an uncommon length, affuming a lively red Colour ; but upon the retreat of the Blood, it flaggs and becomes pale and Shrivell'd.

The

$$
\left(5^{8}\right)
$$

The prepuce is the loofe Skin at the utmoft end of the Yard, which ftretches out and covers the Nut, or draws down, to uncover it, as there is occafion: In time of Erection, it will draw down the Yard a confiderable way, the eafier to enter in Copulation: 'Tis tied under the Nut, with a fine Ligament call'd the Bridle, which muft be cut when it is to fhort, and draws the orifice of the Nut downwards, by reafon it hinders the Ejaculation of the Seed in a ftraight Line. The Prepuce enlarges the pleafure in Copulation, efpecially of the Women.

The Yard has two Cavernous Bodies, one on each fide, taking their rife from the lower part of the Os Pubis, and the Hip-bone, and thefe cavernous Bodies, or Nerves have two Subftances, external and internal, the external one is thick, hard, and nervous, and the internal one, is fpungy, thin, and fungous.

The

## (59)

The Erection of the Yard is owing to thefe cavernous Bodies, which being fill'd with Spirits, fwell and extend themfelves: And the arterious Blood being poured into the cavernous Bodies effects the diftenfion of the Yard, as its lanknefs is occafion'd by fending of that Blood through the Hypogaftrick Veins. The fpungy Subftance of the cavernous Bodies, ftops the Blood for fome time, whereby an erection is forc'd.

In all Enjoyments, the animal Spirits are rouz'd by fancy, which frikes the Idea of Pleafure, and when the Spirits are thus rais'd, they inftantly repair to the Nerves of the Organs of Generation, and puff them up on mixing with the Blood, convey'd thither by the Arteries; and upon the mixture of thefe two, a Fermentation fucceeds, whereby an Erection is effected.

The Uretbra is a nervous Paffage, extending from the neck of the Bladder, to the end of the Yard.

## (60)

It is a common paffage for the Seed, and Urine.

The Tefticles are fo call'd from the Latin Word Teftes, as they witnefs the vigour of a Man. They are feated without the Abdomen, at the root of the Yard; and enclos'd in the Scrotum, which is a Purfe confifting of two Membranes; thefe Veffels do not prepare or form the Seed ; but their office is to import the Blood from which 'tis feparated.

The Tefticles are of an oval Figure, about the fize of a Pidgeons Egg, and in fome larger: They are wrapt up in five Coats or fine Skins, viz. The Scrotum, Dartos, Eritroides, Elitroides, and the Albuginea; the two firft are call'd common, and the three laft are calld proper. The oater Coat is fhrivell'd and encompafs'd with thin Hair. The Subftance of the Tefticle, is white, foft, and loole, compos'd of feveral fmall Seminals Veffels, and Capillaries, which are the Branches of the Arteries,

## (6I)

teries, Veins, Nerves, and Lymphatick Veffels.

There are two Mufcles call'd Cremafters, which keep the Stones fufpended; and if thefe happen to be ftronger than ordinary, they 11 move the Tefticles of themfelves.

The moft volatile part of the Blood is ftrain'd out from the reft by the Glandulous Pith of the Tefticle, which gives paffage only to the fineft Particles, and obliges the reft to return to the Veins. This part of the Blood thus filtrated, is rais'd to a juft degree of perfection by the length of the Pipes, through which it paffes; and what adds to its refinement is the windings of thefe Pipes, which procure a mutual difunion, by whirling about. When the Seed is prepar'd, it is lodg'd in the expanfion of the Vafa Deferentia; being firft put in motion by the Heat of the Vein call'd the Spermatick eArtery; and when the Imagination is enflam'd by amo-

## (62)

rous Thoughts, it fuddenly breaks forth.

The Vafa Deferentia are Veffels reated partly in the Scrotum, and partly in the eAbdomen; they convey the Seed by drops to the feminal Veficles; the two extremities of the Vafa Deferentia are compar'd to a Bunch of Grapes, and Guts of Birds.

Two finall Ducts of about an Inch in length, fpring from thefe Veficles; they are broad near the Veficles, but dwindle as they approach to the Urethra, which they perforate. Thefe Ducts are calld Ejaculatory Veffels, becaufe in the heat of Action, they throw the Seed of the Veficles into the Uretbra, and they are the chief Subjects of the pleafure attending Ejaculation.

Thefe fmall Ducts have ten or twelve Orifices, opening to the Urethra, each of them being fhut by a fmall Caruncle to prevent the continual efflux of Humour, which has the precedency of the Seed. This

## $\left(\sigma_{3}\right)$

is alledg'd to be the feat of a Clap, by reafon volatile Salts faftning near, occafion Ulcers that corrode the Caruncles, and thereupon the Orifices. of the Duets difcharge their limy Liquor.

The Proftate are two Glandalous: pungy Bodies, fated at the root of the Yard, by the head of the Usethru, and furnifh'd with Arteries from the Pudenda; their use is to make a fecretion of limy oily $\mathrm{Li}-$ quo out of the Blood, to referve it for forme time in its Veficles, and to fqueeze it out by degrees, thro ${ }^{2}$ the Pipes of the fall Ducts, to the Urethra.
'T is reported, that forme Perfons have three Tefticles, and that othersare fo flenderly provided, as to have but one; tho either of the cafes happens very rarely. And Animals which have their Tefticles fituated within, are always. accounted more lafcivious than 0 others.

$$
(64)
$$

There are four Spermatick Veffels belonging to the Privy Parts of a Man, two whereof are Arteries, and the other two Veins. The two fpermatick Arteries fpring from the Trunk of the Aorta; and run obliquely upon the Ureters, and along the Mufcle Pofas, 'till they arrive at the Groin, where they are receiv'd by a production of the Peritonemm, and fo conducted to the Tefticles.

The two fpermatick Veins branch out from the Tefticles towards the Vena Cava. The Right extends it felf ftraight to the Trunk of the Cava; but the Left terminates in the emulgent Vein. In their progrefs, they are join'd by fmall Veins from the Peritonaum, and the neighbouring Mufcles, which are loaded with the fuperfluous Blood of thofe parts, in order to lodge it in the Cava.

The fpermatick Veffels are larger in Men than Women; and in both Sexes the Arteries are always

## (65)

ftronger than the Veins. For the ufe of thefe Veffels, the Blood runs in the two Arteries ftraight to theTefticles, each of them dividing into two fmall Branches, the better to penetrate its Subftance, by entring at feveral places, and to procure an exact feparation of the feminal Particles, that accompany the Arterious Blood. And when this is perfected, the remainder of the Blood enters the Branches of the Veins, in order to return to the Cava.

The Valves in the Cavity of the Veins are plac'd at certain Intervals, in order to prevent the Arterious Blood from falling down. They are ferviceable in promoting the afcent of the Blood, and their natural Difpofition conduets it to the Venia Cava.

Of the Privy Parts of a WOMAN.
To purfue the method I have hitherto oblerv'd, I fhall begin my

## (66)

Defcription of the Privities of a Woman, with the external Parts.

The external Orifice is commonly calld the Pudendum; 'tis compos'd of feveral parts, as the Pubes, the Mons Veneris, the Lips, and the great Slit.

The Pubes is feated on the forepart of the Share-bone, juft above the 'Pudendum ; and to keep off the annoyance that might arife from the hardnefs of the Bones in the amorous Adventure, it is rais'd and confifts of Fat, which ferves as a Cuflion. Mons Veneris, rifes like a little Hill about the great Lips, and is cover'd, as well as the Pubes, with a pretty good quantity of rough curling Hair, which begins to fpring when the Female enters her Thirteenth or Fourteenth Year: It is feated a little lower than the Pubes. The great Labia, or great Lips, defcend from the Mons Veneris, and meet in the Perinewm; they confift of doubled Skin, Fat and fpungy Flefh;

## ( 67 )

Flefl; they are cover'd with Hair, but it is not fo ftrong, as that of the Pubes and Mons Veneris. In Girls they are firm, but in thofe who have been enjoy'd, they are flaggy.

The great Slit is the fpace between the two Lips; it is call'd the great Slit, as being much larger than the entry of the Neck of the Womb.

Upon feperating the Thighs, and drawing afide the two Lips, are difcover'd two foft and fpungy Excrefcences call'd Nymphe; they refemble the Thrills, that hang under a Cock's Throat; and their Colour is red, like that of a Cock's Comb; their Subftance is partly flefhy, and partly membranous, confifting of the doubled, and the inner Skin of the Great Labia. The Nymphe condact forth the Urine ; and of Virgins are fo vigorous, that they difcharge their Water with a Noife like hiffing.

Above the Nymphe within the great Cleft is fituated the Clitoris,
(68)
a long round and glandulous Body. This is faid to be the principal feat of Pleafure, being endow'd with an exquifite Senfe. In the heat of Enjoyment, it fwells like unto a Mans Yard on an Erection, by virtue of the Blood and Spirits, that croud into it. For this reafon it is call'd the Female Yard, and indeed, it appears like unto that of a Man in many particulars. This is the part for Friction.

There are two Cavernous Nerves coming from the Hip-bone, call'd the Legs of the Clitoris; and there are four Mufcles in the Clitoris, two for Erection, and two for Ejaculation; the two firlt fun from the Hip-bone under the Caverrious Nerves; and the two others calld Pudendi, take their rife from the Sphincter of the eAmus, Thefe Murcles ferve to ftraighten the Orifice of the Vagina. The Arteric Pudenda furnifh the Clitoris with Blood, and the Veins of that Name

# ( 69 ) 

carry off the fame Blood into the Cava.

Under the Clitoris is the urinary $P_{a}$ ffage, larger and fhorter than that of a Man, whereby Women fend forth their Urine with the greateft violence and difpatch. This Paffage is furrounded with a Sphincter, which is a Mufcle that ferves to confine, or give paffage for the Urine at pleafure.

Between the fleflyy Fibres of the Urethra, and the Membrane of the Vagina, lie the Proftates, having feveral Channels which terminate in the lower part of the Vulva, and thereby difcharge a flimy matter, which mixes with the feed of the Male, in the time of Enjoyment.

And between the two great $L a$ bia, appear the four Caruncles call'd Myrtiformes from the refemblance they bear to Mirtle-berries. They are fmall flefhy Eminences furrounding the fmall Slit, made of the flefly Wrinkles of the Vagina, which render

## (70)

der the Paffage fo much the ftraighter: Their ufe is to heighten the mutual pleafure of Enjoyment, by clinging round and locking up the Yard; and to facilitate the egrefs of the Child by extenfion. They are reddifh firm and high in Virgins, and joind fideways to one another by fmall Membranes, which tie them together, and make them refemble a Rofe-bud half blown: But in other Women they are feperated by the entry of the Yard.

The uniting of the Membranes of the Caruncule Myrtiformes, ftraighten the Paffage, and afford the true mark of Virginity, (if there be any fuch.). The pain of the firft Adventure is owing to the forcing of the Paflage through, and tearing off thofe fmall Membranes; and a Mans Inclinations being always heighten'd in the firft Nights Enjoyment, the pain to the Female is encreas'd by his ardent ftruggles; her Virgin Sufferings augmenting with his

## (7I)

his affection: But in fome Females the Carancles are rang'd in fuch a manner, that the Yard may enter without violence, fo that there is no certain Evidence of a Maiden-head.

Some e Anatomifts mention a Membrane call'd Hymen, feated near the Caruncles in the Vagina, which continues ftretched over the Paffage, 'till the approach of a Man rends it ; and that this $H$ men is a mark of Virginity; but this is more imaginary than proceeding from any Demonftration.

The Vagina is the neck of the Womb, a round Paffage between the outer and inner Orifice, which receives the Yard like a Sheath. In Women that never bore Children, this Neck is about four Inches long, and an Inch and a half broad, but after Child-bearing, its capacity cannot be limited. It is nervous, and fomewhat fpungy, confifting of two Membranes; the Wrinkles of its inner Membrane empower it to pro-

$$
(72)
$$

long, dilate or contract, in order to fit the Yard, of any length or fize, and to afford a Paffage to the Foetus. The Body and Neck of the Womb, make the Figure of a Bottle turn'd upfide down, or rather a proud Flask. The inner Orifice of the Womb, is a perforation like the Head of a Man's Yard; 'tis the beginning of a narrow Paffage, which enlarges to afford a way for whatever enters or comes from the Womb; it opens to receive the Seed in the moment of Ejaculation; and upon Conception fhuts clofe, and fo continues till towards the laft Month of the Woman's Reckoning: It is compos'd of Membranes wrinkled and furl'd up, capable of diliating themfelves to a great extent. This is the part which gives the Woman pain in Child Birth, the Orifice being fmall, and opening but gradually, purfuant to the Efforts of the Fatus, which retards the Birth. After the Child is pait,

$$
(73)
$$

palt; this Orifice is loft, and the whole Womb is only one large Cavity reaching from the entry of its Neck to the bottom; but this is of very fhort duration, for thefe parts very foon contract themfelves like an empty Purfe, and refume their natural poiture. The Action of this inner Orifice is purely natural.

The Subftance of the buttom of the Womb is Membranous, and about a Fingers breadth thick, fo that it dilates its felf very commodioufly: The inner Surface is interlac'd with a great many fmall Pores, and little Veffels which diftil the menftrual Blood in Monthly Quanties.

The Womb has Nerve;, Arteries, and Veins, difpers'd. The Nerves give it a fenfe of Pleafure and Pain, and a fympathy with all parts of the Body: The Arteries and Veins ate call'd the Spermatick and Hypogafrick, and confift of an infinite number of Branches fpringing from all parts of the Womb, exporting the Blood to the

[^0]Trunk

$$
(74)
$$

Trunk of the VenaCavd: The Womb is fprinkled on all fides with Blood imported by the Arteries. Thefe Arteries not only furnifh the Womb with a proper Nourifhment, but alfo pour in Blood upon the Placenta, in order to be fent through the Na vel String to the Fatus. When a Woman is not with Child, this Blood nlips away thro' the feveral Veffels into the Cavity of the Womb, and from thence it paffes the Vagina every Month. In teeming Women thefe Branches formetimes difoharge Blood, when there is a greater quantity than is neceffary for the Nourifhment of the Child.

The fpermatick Artery divides it felf into two Branches, one repairing to the Tefticle, and the other to the Womb. It carries Blood in one of its Branches to the Tefticle, in order to the fecretion of Seed, and by the other Branch it furnifhes the Womb with Blood for its Nourfifment, and the fuperfloons Blood

## (75)

Blood is carried back by two Branclies of Veins, one from the Tefticle, and the others from the Womb.

The Teftieles of a Woman are call'd Ovaria; and they differ in Situation, Figure and Subftance from thofe of Men. They are feated within the Abdomen upon the fides of the bottom of the Womb, Some Writers are of opinion, that Nature plac'd the Tefticles of Women within to heat the Seed and work it up to a degree of perfection: $\mathrm{O}_{7}$ thers tell us, that the delign of this Situation was to excite Women to Generation. The ufe of the Tefticle; is to filtyate the Seed and referve it; and to perform at once the office of a Man's Tefticles.

Their Figure is broard and flat, (feldom exceeding the Subitance of a fimall Pigeons Egg) they are tied and held faft by fome part of the Flag of the Trumpet; and they are knit to the fermatick Veffels, which

## $(76)$

grow larger after the Egg lias taken Root in the Womb. For their Subftance, they are a collection of Veficles, commonly took for Eggs. In the Ovarium of a Woman are a Million of fine fmall Blood Veffels difpers'd upon the Tunicles; and fmall unperceiveable Glandules, that ftrain out a white milky Liquor, which attains perfection in the caviry of thefe Veficles, and then compores the matter of the Egg, which includes the Sperm that contains the Fatas.

The more volatile part of the Seed of a Man paffes through the Tube to the Ovarium, in order to fecundate the Eggs. The Tubee are of the form of a Trumpet, which gives them their Name: They take rife from the bottom of the Womb, and their Orifice, which is continually open, is lac'd round with fmall Membranes like a Fringe, and is call'd the Devil's-bit, or the Flag of the Trimpet. The office of the Tube,
is

## ( 77 )

is to facilitate the defcent of the Egg into the Womb. The feminal Sirit puts the Tube in motion, whereby the jagged part embraces the Ovarium, and the Egg fermented by the Spirits of the Seed, infenfibly, difengases it felf from the Ovurium, and breaking its Membrane, enters the Tube, in order to defend into the Cavity of the Womb: And in cafe of Twins, or where two or three Children are Born; they always firing from the like number of Eggs, difengag'd from the Ovarium at the fame time. The extremities of the Tube inferted into the bottom of the Womb are call'd the Horns.
The Womb is covered with the Peritoneum; and a peculiar Membrake which lines the whole infide; and the bottom is generally froth and even, but the Neck is always fold. The Ligaments are nothing elfe but Productions of the Peritonvaniz, which come from the Loins, and are inferted in the bottom of the

## ( 78 )

Womb to prevent its falling down upon the Neck: They likewife keep the Womb from mounting too high: When thefe Ligaments are unbent, they refemble Bats Wings.

There are feveral Lymphatick Veffels belonging to the Womb, which creep along its outer part, and after a reuniting into large parts, empty themfelves into the Ciftern of the Chyle.

The Womb has a fhort Neck, diftinguifh'd by that Name from the Vagina; it is the Paffage which reaches from the inner Orifice to the principal Cavity of the Womb: It is about an Inch long.

In the Cavity of the Womb, the two Horns dilate themelves, and form particular Bags, each of which contains a Frotus. This Cavity enlarges it felf more or lefs in proportion to the bignefs of the Fatus, or the number of Children, as in cafe of Twins.

## (79)

The Womb is feated in the lower part of the Hypogaftrium, between the ftraight Gut and the Bladder. The Cavity where 'tis lodg'd, is call'd the Pelvis or Bajin, and is larger in Women than in Men, fo as to give the Womb liberty to diftend it felf upon Impregnation; it is tied faft at the bottom, and at the Neck. The Neck is knit before to the Bladder, and the Share-bone, and behind to the ftraight Gut and the Os Sacrum. The bottom is not tied fo faft as the Neck, it requiring more liberty to move and dilate it felf; but to prevent the fhifting of its Seat, the Ligaments are equipp'd, being four in Number, two above, and two below.

Having defcrib'd the Privities of Man and Woman: I come now to my differtation upon the Generation of Man, and the more particular ufe and dimenfions of the Parts employ'd therein.

## ( 80 )

Of the Generation of MAn.
An Animal cannot be produc'd without a Couple, wiz a Male and a Female, each of which performs its part in the work of Generation.

Their entring on this work is call'd Copulation, which is the joining of the Male to the Female: And both of them are equally tranfported with a furious and reftlefs Paffion, occafion'd by a mix'd motion of pleafure and pain in the Genitals, which ftrongly excites a defire for eadh other.

As this Enjoyment is natural, there needs ne Inftruction; Inftinct in all Animal directs the way of aeting, that is voft convenient for propagating their Species : And a Man, though brouglit ap in neven fol great Ignorance, at his Age of Maturity naturally enclines to it, and needs no other Guide but the diatates of

$$
\mathrm{Na}-
$$

# ( $8 \mathbf{I}$ ) 

Nature to find out the center of Enjoyment.

But if Nature had not planted in the Genitals a fenfe of extraordinary pleafure in the amorous Engagement. Man would feldom give himfelf the trouble of Copulation: The caufe of this pleafure fome impute to the mixing of Spirits with the Seed, which give a pleafing tickling ; and that this is encreas'd by the finenefs and bending of the Nervous Fibres of the parts: Others are of opinion, that the Salt in the Seed, and the Spirits accompanying, prick the parts through which they pafs and occafion fuch an agreeable Titillation: And fome give this reafon for the pleafure, that as in Eating we have an Enjoyment, which no part but the Tongue and Palate partake of ; to in Copulation a peculiar pleafure arifes, of which the Generation Organs are only fenfible; and that Animals are mov'd

## $(828)$

mov'd to the Act of Generation, as they are to Eating.

The tickling Pleafure which affeots Women, proceeds from the Emotion, that is excited when the Seed difengages it felf from the Tefticle, and pafles through the Cavities of the ejaculatory Veffels, in order to be darted into the Womb. When a Woman is not with Child, the Seed is thrown into the Womb by the Shorteft Veflel, and when fhe is pregnant, the Seed is thrown into the Neck of the Womb by the longeft Branch: And for this reafor, bigbelly'd Women are more pafionately fond of Embraces than others; for the Seed fpending more time in its intricate Paffage, raifes a more tranfporting and lafting Titillation.

In refpect to the Parts of a Man employ'd in the work of Generation, the Yard when lank cannot go about it ; and it may be fo ftiff; as not to be proper: And fometimes the erection of the Yard is foftrong,

## ( 83 )

that it is always bent : A large Fard does not ftand fo readily, as a fmall one; and when it does it canot fubffifolong, by reafon it requires more Blood to fill it ; and whien full, it is heavier, and confequently apt to fall in a very little time: And the bufinefs of Genesation fuffers no alteration from the flortnels or length of the Yard within the Neek of the Womb; for the office of the two round Ligaments, is to enforce the bottom of the Womb to approach the liead of the Yard, in order to receive the Seed in time of Ejaculation: But 'tis as difficult a matter to perfwade fome Lafcivious Females, that a Yard of fmall Dimenfions is equally ufeful and pleafurable to one of a confiderable Longitude and Circumference, as it is to perfwade a Club of Ravenous Stomachs, that a thin fhrivell'd Shoulder of Mutton is of equal Goodnefs witl a Haunch of well-fed Venifon.

## $(84)$

The parts of Women frequently differ in their Extent and Furniture ; a great many Husbands are fuch Fools, as to covet difficulty in their firit Approaches; and to meafure the Virtue of their Wives, by the labour of their confummating Attack; not confidering Nature has fo order'd, that the Privy Parts are in the fame Condition with the Mouth and the Eyes; fome are little, and others are large; fo that thofe who have naturally the larger fize, may be unjuftly charg'd with Lewdnefs; and on the other hand, thofe, who by the natural difpofition of the Parts are Itraighter, may after Copulation bereputed Virgins. A Little Woman may have a large Mouth, $E^{\circ} \mathrm{c}$. and a large Woman a little one, whereby the leffer Perfon may have the more capacious Privities: And the fame rule may be obferv'd in Men, in refpect to the Nofe, which feems to have equal Authority in determining the Dimenfions nature has provided in

$$
(85)
$$

the Male, as the Mouth or Eyes in the Female.

Nature does not always observe an exact rule of Symmetry, the vifible Limbs and Parts are oftentimes difproportion'd; we frequently fee a large perfonable Man, fupported with flender Legs, and a Dwarf equip'd with large nervous Calves; and the fame want of proportion is certainly to be found in the Privities.

I have known a wanton Female marry a Perfon of an extraordinary Stature, in expectation of a large Pleafure, with Sorrow confess the was greatly miftaken. And as a ftrong Soil does not conftantly afford the moot plentiful Crop of productive Grain; fo the Privy Parts of a robuft Perfon, are not always ftock'd with the greateft quantity of furrounding Ornaments.

But to return to the Privy Parts of Women ; in forme extraordinary cafes, the Lips of the Matrix, may
I be

$$
\text { ( } 86 \text { ) }
$$

Ge fo clofely join'd, that a Yard of the fmalleft Size, cannot poffibly enter (when they are to be artfully feperated by a Surgeon:) And in other Females the Paffage is fo wide, that the largeft Member will make its way without the leaft difficulty: And I at this time know a Gentleman very well provided in the parts of Generation (beyond what is common) that has had three Wives, all of them of unfpotted Reputations, and the oldeft not above Nineteen; who affirms that the Nights of confummation with each of his Spoufes; he was in quite to the Tefticles in his firft penetrating attempt.

The fame Gentleman has declar'd, that in his Youth, when his Curiofity led him to the utmoft variety; he has fometimes met with a Lady of Pleafure, whofe Parts muft be fuppos'd to be extended to the utmoft latitude of Nature, and to which upon Examination, no binding

Prepa-

## ( 87 )

Preparations had been applied ; that he could not poffibly enter in themoft encountering Embrace, which fufficiently fhews the incertainty of Nature, and the difficulty attending the proof of Virginity. And this Gentleman is of the fame Opinion with many others, that a narrow entrance to the Privy Parts of a $\mathrm{Fe}-$ male, very much impedes a mutual Enjoyment.

Thus much for the Dimenfions of the Privities : I now proceed to Generation. When the Fancy warm'd with an Idea of Pleafure, occafions a diffution of the Animal Juice, of Confequence enfues Erection: An Erection being effected, and the Yard lodg'd in the Neck of the Womb; the Seed taking leave of the feminal Veficles, paffes through the Ejacutory Veffels, and enters the Uretbra; from whence 'tis fquirted out with a Jirk, by vertue of the Convulifions that then feize the Yard: And as Ejaculation the laft point of the I 2 Man's

## ( 88 )

Man's Action, is the critical moment of pleafure, fo 'tis the principal aim, he has in View, and all the Circumftances that uher it in, have an eye upon that Inftant: The fanguine Perfon is the moft amorous, and produces the greateft quantity of laudable Seed.

The Seed of a Man being fyring'd into the Privy Parts of a Woman by the Yard, it repairs to the bottom of the Womb, and its inner Orifice fhats it felf clofe: ' After ' which the Seed being embrac'd ' and prefs'd by the Womb, all its ' Particles begin to take their re-- fpective Pofts ; the fubtileft con' tinue in the Center, and confe' quently the groffer and fuperfluous ' Parts are thruft towards the Sur' face, where they produce the Af ' ter-birth, the Navel-ftring, and the - Membranes, in which the Fatus ' is wrapt. In the mean time all the

- Partioles calculated for forming the

## ( 89 )

' different parts of the Body, difengage themfelves by the force of their motion, and either part or join according to their mutual Dif-- parity or Conformity ; fo that thofe defign'd for the head Affemble in the place where they ought to be; and thofe for the reft of the 6ody do the like: And at the fame time among thofe calculated for the - Head, the Particles qualify'd for ' forming the Eyes, Ears, Efc. ren${ }^{6}$ dezvous in their proper places: The 6 fame may be faid of the Particles ' of which the Breaft, Belly, and ' Limbs are compos'd. The Form, 6 Structure, Order and Conneetion of ' all thefe parts, depends chiefly up' on the Spirit enclos'd within the - Seed ; which by the meer neceffity ' of its Motions, and without any 6 Knowledge or Underftanding, unravels the Cbaos where the Parti' cles lay confus'd, and ranks them in the fame Order, that they had when lodg'd in the Body of the Ani-

$$
\text { I } 3 \quad 6 \text { mals, }
$$

## ( 90 )

${ }^{6}$ mals, from which they fprung. The
6 parts of the Fatus being thus form'd, ${ }^{6}$ the fubtileft part of the Spirit conti${ }^{6}$ nues in the Center of the new-form'd
6 Body, i. e. the Heart ; and there ${ }^{6}$ makes a fort of Fire without Light 6 (being the natural Heat that gives ${ }^{6}$ Life) which is fed by the circular ${ }^{6}$ motion of the Blood that paffes ' there inceffantly. This is the moft probable Idea of forming the Fastus, and what paffes in the Womb, that is given by any Ancient or Modern Writers.

Some are of Opinion, that the Fatus is form'd of a mixture of the Male and Female Seed ; and that thefe two Seeds impregnated with the Spirit of Life, are the agent and matter of Generation. Some alledge that the Male Seed is fufficient of it felf to form a Fatus; and that the Woman only gives it a lodging, and furnifhes the neceffary Blood for its nourifhment in the Womb: The Male being in this fenfe, look'd upon

## (91)

as an accomplifh'd and perfect piece of Work, and the Female only a fertile Ground, which produces good Seed where the Labourer fows it well: And others are of opinion, that the Woman's Seed contains the firft, and the true Model of the Factus; there being fmall feminal Veficles in the Tefticles of a Woman, call'd the Eggs; which contain within themfelves, all that is neceffary to give the Fatus a Being.

But the moft common and rational Opinion is, that of the Fotus being form'd by the mixing of the two Seeds inthe Womb; that Manand Woman are equally perfect; and that both of them being furnifh'd with Teiticles, which make a fecretion of Seed, both of them muft fupply; and a Woman cannot be got with Child, unlefs fhe and the Man ejaculate their Seed at the fame time.

Thofe enclining to believe, that the Male Seed is fufficient of it felf to form a Fotus, plead that the Seed

## ( 92 )

of a Man differs vaftly from that of a Woman: That the former is white, and of a thick confiftence, compos'd of all the parts that are capable to form a Body; and that the latter is only a fharp and yellowifh ferofity, which cannot contribute any thing towards the form of the Feetus. But this is efteem'd by other Perfons a groundlefs fancy; for the Structure of a Womans Tefticle is more admirable than that of a Man, which fhews that the Seed feparated by it, is of confiderable ufe: And feveral Children have their Mothers Features and Hümour, which demonftrates that the Father, to whom they oftentimes bear no refemblance, does not furnifh all himfelf.

Thofe Perfons who pretend that the Womans Seed contains the firft, and the true Model of the Fatus. Compare the Female Tefticles to a bunch of Grapes, or a Bee-hive; confifting of Veficles, each of which contains a little Animal, almoft compleated

## ( 93 )

pleated in all its Parts, after the fame manner as the Egg of a Fowl : And that Man's Seed contributes to Gerteration, no otherwife than as it animates the Egg: But the Opinion which is generally receiv'd, is that both the Male and the Female Seed contain fuch Particles, as are qualify'd to form a Body and a Spirit capable of all the Motions perform'd by the Animal, from which they have Being ; and that Generation depends upon an exact mixture of the two Seeds.

The Opinions relating to the matter whereof the Seed is compos'd, are no lefs various than thofe of the forming of the Faetus; fome Anatomifts fay, 'tis prepar'd by the conco? and converfion of Blood, effected in this manner. The Blood imported to the Tefticles by four fpermatick Veffels, two Arteries and two Veins: The Vein and Artery of the fame fide, having a mutual Communication, blend the arterious and venous Blood

## ( 94 )

Blood together; and this mixture of arterious and venous Blood boyl and convert into Seed by the peculiar faculty and virtue of the Organs of the Tefticles: This was the Opinion of the Antients.

Others fay, that the Seed is a Juice imported by the Nerves to the Organs of Generation; and that it difills from the Brain to the Privities; that in the time of Ejaculation one may feel it trickling along the Spina of the Back; that when the Adventure is over, the Animal is feeble and dejected through the great Diffipation of the Spirits that are hurry'd along with the Seed; and that the Seed is of the fame colour with the animal juice of the Nerves.

Other Anatomifts tell ye the Seed is compos'd of an infinity of little A nimals, which they call feminary; that thefe fwim and flutter about in the Liquor, and may be eafily dif cover'd with a Mifcrofcope; that thefe feminal Animals are fo many

## (95)

Seeds of Men, which being convey'd to the Ovarium, ftrike at the firft Egg they meet with; upon which one of them perforates the Membrane, or gets into the Egg by a fuppos'd Orifice, and prefently fhuts it felf up, leaving the reft to perifh without Doors, unlefs fome of them have the good Fortune to flip into another Egg. The Animal that enters the Egg, ferves for Sperm, which by fwelling it up, prompts it to difengage it felf from the Ovarium, and tumble into the Tuba, which conducts it to the Womb.

But the moft fubftantial reafons given for the compofure of the Seed are grounded upon Circulation, that the feminal Particles are feparated and filtrated from the Blood by the Tefticles ; and Anatomifts acquainted with the Structure of the Tefticles, fay, that the Seed is produc'd by a continual Filtration of feveral Particles, which being gather'd into a

Body,

## $(96)$

Body, make a Liquor that is qualify'd for the forming of a Man.

Mr. Lamy in his Anatomical Difcourfes, fays, that the fame neceffity which obliges Plants after a fet period of time to put forth the Seeds which give being to others, does likewife influence Animals at a certain Age to produce prolifick Seed, which he explains thus: The moifture of Infancy being confum'd by the overpowering Heat, the Blood is crouded with a greater number of Corpufculums qualified to nourifh the Parts and repair their Loffes, than there is occafion for; fo that a great number of thefe nutritious Particles meeting with no reception in the refpective Parts, return along with the Blood. The Head fends back fuch Particles as are proper for recempofing all the different Parts it is made of; and fo do the other parts. Now all thefe various forts of Particles being mix'd with the Blood, are ftrain'd through the Tefticles; after which they rally
and compofe a Humour which is the fenfible and corporeal part of the Seed of Man.

Seed is a very fweet Liquor when 'tis in a regular State, but when 'tis long under confinement, it turns perfectly fower, and caufes very pernicious effects in both Male and Fe male. Men are harfher in their Tempers, and frequently attack'd with Vapours to a degree; and Women are thrown into a deplorable Condition, which will find no abfolute Cure, till the ftagnating Seed is evacuated by Marriage: The Seed mixing with the Blood breaks it Texture and changes its Confiftence; fo that by rendring it more ferous, liquid and cold, and by flattening the Rednefs of the Blood, it makes the colour of the Skin lefs lively; and at length occafions the Virgins Diftemper.

Monfieur DroNis is of opinion, that moft of the Nuns and other Girls that are taken to be poffers'd with Devils, were fubject to Va-

pours only when they acted the awkard extravagancies that Hiftory is full of. And I have been inform'd by the learned $\mathrm{Dr} . C-n$, and other eminent Phyficians, that Yapours will fo powerfully prevait in fome Young Females, by a ftagnation of the Seed, that they are oblig'd to prefcribe extraordinary Remedies, and fometimes Friction to procure relief; and to prevent Convulfions, irregular Imaginations, $\xi^{\circ} c$. which would otherwife enfue, if not a perfect Lunacy for a time.

An early Marriage is the moft effectual Prefervative againft the numerous Diforders proceeding from quantities of Seed unnaturally confin'd; and will render a perfect Health and Tranquility; unlefs it be in the cafe of Impotency; or in fome Countries where a Man by tying a Knot upon his Codpiece, when the Prieft pronounces fuch and fuch Words on the day of Marriage ; lays claim to a right of preventing its

its Confummation: But if a Man cannot confummate his Marriage, you'll always find it proceed from a natural Caufe ; and that the Devil has no hand in it.

To conclude my Subject of Generation, and the Parts employ'd therein : I fhall here infert an Obfervation of St. auguftin. The Inftruments of Generation (fays he) are a calld Pudenda, becaufe they fipeak our Shame in this, that be who commands all the other Parts, cannot reduce the fe to Obedience.
