For St. Vitus' Dance

Take of Roots of Mandrake, Spithguard,  
 Comfrey, Great Mace, Sassafras  
 & Solomon's Seal each a handful,  
 of each & Singlass each 1/2 an ounce  
 of Root Raisins 1 lb. & 3 Tablespoonfull  
 of Blacked Hartshorn.

Put the whole in 3 quarts of Water  
 & boil down to 3 pints.  
 Give 3 Tablespoonfulls 3 or 4  
 times a day.

For Rheumatism

1 Tablespoonfull of Common Salt  
 1/2 teasup " of Vinegar  
 1/2 pint of Soft Soap  
 mix & add meal to make  
 consistence of Poultice.  
 apply to part affected.

For Rheumatism—

Take 6 Bulbs of English Garlic,  
bruse in a mortar so as to  
preserve the juice, till perfectly  
soft, — 2 or 3 Table Spoonfuls of  
fine Sack, & a small Sprinkle  
of flour to make a paste. —

Spread the plaster on a piece  
of Silks oil cloth, & sprinkle a  
small quantity of Mustard,  
not sufficient to blister, but  
just to irritate the skin, & apply  
to the affected part. —

Cham. Th.

To Clean Lustre of White Marble.

Ointment for Burns

Take half a pint of white manure from under the horse's feet, & simmer it in fresh laid tins minutes, then strain it off into a tin top & it is ready for use.

Will heal a burn quicker than any other ever invented.

W. M. A. Rice

Roue, Mass. -

(From Rural N. Yorker Dec. 10. 1889)

To remove Warts on a horse's nose &c. -

See Appendix  
on  
Warts

Take the inside of an old shoe sole recently worn, & burn to a coal, - then powder it & mix with Salt Grease to make a Salve, with which the warts are to be smeared over for 2 or 3 days. - 7/6-1860 J. S. Holmes

Cure for a Felon

Take a half pice of strong Linen,  
dissolve in it, a Table spoon full of  
Sal Eraticus, - heat as hot as flesh can  
bear, - soak the felon therein, &  
repeat as often as the pain returns.

Feb. 4. 1760 - Rural New Yorker

Liquid Opodeldoo

2 quarts Alcohol

2oz Castile Soap

1oz Camphor

oz. Origan. & oz. Rosemary each 3j

- dissolve soap in alc. then all the others.

- for sprains, Chibblains &c -

Henlock oil for sprains, well  
rubbed in 3 times a day

To Cure Chibblains

2 quarts of Lard

1 Pint of Turpentine

$\frac{1}{4}$  lb. Camphor - M

For cleaning Silver Ware (cast)

Add 3 Gallons of Water to 1 lb Cyanide  
of Potash - dip the article in & stir it  
round quickly & immediately remove it  
& hold under a hydient to wash off - dry  
it in Saw Dust - (see answer & co. line)

Cuculio Mixture

To one pound of Whale oil Soap  
add four ounces of Sulphur.  
Mix thoroughly & dissolve in twelve  
gallons of Water.

Take one ~~part~~ half peck of  
quick lime, & when well slacked  
add four gallons of water, &  
Stir well together. When settled  
& clear, pour off the transparent  
part & add to the soap & sulphur  
mixture. —

To this mixture, add four  
gallons of strong tobacco water.  
Apply this compound when thus  
incorporated, with a garden  
syringe to your plums or other  
fruit trees, so as to drench all  
parts of the foliage. If no rains  
succeed for three weeks, one  
application will be sufficient.  
If washed by rains, it should  
be renewed. —

"A. Hort. Observer"

Requires to be applied every  
2 or 3 days from the time the fruit  
is first formed:— (Even then doubtful)  
N.B.

For Dysentery

Take of Saturated Solution of Sulphate  
Magnesia - ℥viij -

Arom. Sulph. acid ℥ij - Mix. -

(Saturated sol. is prepared by dissolving  
Salts in an equal quantity of water,  
(by weight) at 60° Fahrenheit - It will  
be ready for use in 8 or 10 hours, by  
shaking occasionally.)

Medicinal dose for an adult, - table-  
spoonful, with 2 or 3 ounces of water,  
every 4 or 5 hrs till it moves the  
bowels. - If much pain, add opiates  
- morph. - or Paregoric &c. -

Very highly commended in  
Med. Reporter. Vol. 8. No 17. July 26. 1862  
p. 403. - as originally from

Elmer. Vol. 1.  
National Library of Medicine  
Bethesda, MD

Condition On Receipt: The half leather and decorated paper binding was extremely dirty, worn, abraded, deteriorated and powdery, particularly at the corners, edges, endcaps and joints. The joints and internal hinges were partially broken. The sewing was loose. The pages were dirty, discolored, acidic, weak and brittle. There were several loose enclosures at the beginning of the volume. The manuscript inks present were acidic and varied in intensity.

Treatment: The volume was collated and disbound. The inks were tested for solubility. The head, tail and pages were dry cleaned and washed and then buffered (deacidified) with magnesium bicarbonate solution. Tears were mended and folds guarded where necessary with Japanese paper and rice starch paste. The volume was sewn on linen tapes with linen thread. Windsor handmade paper ends with a linen hinge were attached. The volume was case bound in full cloth. A pocket was attached to the back cover to house the loose enclosures. Title information and lines were stamped in gold foil onto the spine.

### Wash for Outbuildings.

I WANT to know how to make a good, permanent whitewash for outside buildings and board fences.—A. LAING, *Simcoe, C. W.*, 1859.

WISHING to know how to make a whitewash that is both durable and good, I thought the inquiry would perhaps be answered by you or your numerous correspondents. I have a fence inclosing about an acre of ground, a poultry house, and a small barn to whitewash, and I would like to have them appear well, and also the whitewash to last some time.—D. GETLAET, *Williamsport, Pa.*, 1859.

Take a barrel and slake in it carefully, with boiling water, half a bushel of fresh lime. Then fill the barrel two-thirds full of water, and add 1 bushel of hydraulic lime or water cement. Dissolve in water and add 3 pounds of sulphate of zinc, (white vitriol,) stirring the whole to incorporate it thoroughly. The wash should be of the consistency of thin paint, and may be laid on with a whitewash or other brush. The color is pale stone color—nearly white. If you wish it to be straw color add yellow ochre, 2 pounds in powder; if drab, add 4 pounds raw umber.

Another good wash is made as follows:—Slake lime with hot water, in a tub to keep in the steam. When dissolved, and in a half fluid state, pass it through a fine seive. Take six quarts of this lime and one quart of clean rock salt for each gallon of water—the salt to be dissolved by boiling, and the impurities to be skimmed off. To five gallons of this mixture, (salt and lime,) add one pound of alum, half a pound of copperas, three-fourths of a pound of potash, (the last to be added gradually,) four quarts of fine sand, or hard wood ashes. Add coloring matter to suit the fancy.

A correspondent of the *Country Gentleman* gives the following:—One bushel unslaked lime; half a gallon salt; three pounds alum, powdered; three pounds saleratus. Mix and put in a tight barrel with one head out. If the lime is quite fresh, cold water—if not, then use hot water. Keep stirring while slaking, adding water as required, so as not to become dry at any time. If it heats dry it becomes lumpy, and must not be overflowed with water so as to prevent the slaking going on. Stir up well from the bottom. When finished it may be thick as mush. When to be applied by a brush, make the mixture the consistency of whitewash—about the thickness of cream. Apply the first coat very thoroughly, filling every crack or interstice between the bricks or in the boards. For wooden fences a second coat of the same material is all that is required. Those who desire to have some other color than white, can add coloring matter to taste.

FOR BRICK HOUSES.—For the second coat, add to the first named materials 12 pounds melted tallow, and mix as before. This coat is impervious to water—is brighter, looking clean longer than paint, and preserves the cement between the bricks better than paint.

Two quarts skimmed milk; 2 oz. fresh slaked lime; 5 lbs. whiting. Put the lime into a stoneware vessel, pour upon it a sufficient quantity of milk to make a mixture resembling cream, the balance of the milk is then to be added; and lastly the whiting is then to be crumbled and spread on the surface of the fluid, in which it gradually sinks. At this period it must be well stirred in, or ground, as you would other paint, and it is fit for use. There may be added any coloring matter that suits the fancy. It is to be applied in the same manner as other paints, and in a few hours it will become perfectly dry. Another coat may then be added, and so on, until the work is completed. This paint is of great tenacity, and possesses a slight elasticity, which enables it to bear rubbing even with a coarse woolen cloth, without being in the least injured. It has little or no smell, even when wet, and when dry is perfectly inodorous. It is not subject to be blackened by sulphurous or animal vapors, and is not injurious to health. The quantity above mentioned, is sufficient for covering 57 yards with one coat.

Take a barrel and slake in it carefully, with boiling water, half a bushel of fresh lime. Then fill the barrel two-thirds full of water, and add one bushel of hydraulic lime or water cement. Dissolve in water

and add three pounds of sulphate of zinc, (white vitriol,) stirring the whole to incorporate it thoroughly. The wash should be of the consistency of thin paint, and may be laid on with a whitewash or other brush. The color is pale stone color, nearly white. If you wish it to be straw color, add yellow ochre, two pounds in powder; if drab, add four pounds raw umber.

Another good wash is made as follows:—Slake lime with hot water, in a tub, to keep in the steam. When dissolved, and in a half fluid state, pass it through a fine seive. Take six quarts of this lime and one quart of clean rock salt for each gallon of water—the salt to be dissolved by boiling, and the impurities to be skimmed off. To five gallons of this mixture, (salt and lime,) add one pound of alum, half a pound of copperas, three-fourths of a pound of potash, (the last to be added gradually,) four quarts of fine sand, or hard wood ashes. Add coloring matter to suit the fancy.

A correspondent of the Country Gentleman gives the following:—One bushel unslaked lime; half a gallon salt; three pounds alum, powdered; three pounds saleratus. Mix and put in a tight barrel with one head out. If the lime is quite fresh, cold water, —if not, then use hot water. Keep stirring while slaking, adding water as required, so as not to become dry at any time. If it heats dry, it becomes lumpy, and must not be overflowed with water so as to prevent the slaking going on. Stir up well from the bottom. When finished, it may be thick as mush. When to be applied by a brush, make the mixture the consistency of whitewash,—about the thickness of cream. Apply the first coat very thoroughly, filling every crack or interstice between the bricks or in the boards. For wooden fences a second coat of the same material is all that is required. Those who desire to have some other color than white, can add coloring matter to taste.

*For Brick Houses.*—For the second coat, add to the first-named materials, twelve pounds melted tallow, and mix as before. This coat is impervious to water,—is brighter, looking clean longer than paint, and preserves the cement between the bricks better than paint.

Take of  
Horehound,  
Catnip,  
Tansy,  
Hysop,  
Virginia Snake-root, and  
Sarsaparilla, each 1oz.  
Wild-cherry bark, and  
Elecampane, each 2oz.  
Hops . . . 2 dr.  
One Beet-root, sliced

Boil these in two quarts  
of water for half-an-hour  
and strain off the liquor,  
to which add,  
Molasses, a pint & a half,  
Gum Arabic, and  
Licorice, each 1oz.  
Boil again a few minutes  
and add  
Brandy, half a pint  
and juice of three Lemons.

Dose, a wineglassful three or four times a day.

The boiling is directed to be done in a new earthen  
vessel.

Hoping some of your patients may be  
as much benefited by the curious recipe  
as one of mine appears to have been I am  
Yours Respectfully,  
Edward Harvey,

With one bottle

Wm. Elmer M. D.

Bridgeton N. J.

H 29  
Vol 1

Dear Sir, Herewith allow me  
to lay before you an Article  
of my preparation, which  
aspires to the general favor  
of medical men.

Its distinguishing char-  
acteristics will be seen to  
be, that it is prepared from  
the ultimate alkaloids, in  
purity, and contains free,  
permanent Hydrocyanic Acid,  
a desideratum in Medicines,  
not hitherto obtained.

The components are chem-  
ically united so as perfectly to  
resist the action of time,  
and it is believed, such is

the accuracy and purity of the  
preparation, as to afford any  
energy, certainty and uniform-  
ity of remedial effect, sur-  
passing any other in use.

My purpose has been to  
afford to Practitioners an  
Anodyne Expectorant, of such  
intrinsic superiority and  
worth, as should commend  
itself to their attention  
and favor.

Allow me to re-  
quest, you will give  
it a trial, and if you  
find it worthy, yours in  
fluency.

Very Respectfully Yrs.  
James C. Ayer.

To make Black Salve. - Take  $\frac{1}{2}$  pound of hog's lard,  $\frac{1}{4}$  pound <sup>red</sup> lead  
finely powdered, one ounce beeswax; let the lard & wax be melted, then add red lead  
by degrees, & keep stirring the whole till it is mixed; let it boil gently till it  
acquire a black color, stirring it all the time. - You wished directions for  
making black salve, & here it is, if you never have occasion to use it so much the  
better.

At<sup>to</sup> Ochee Pierson.

Your affectionate & Dutiful Son

Daniel Pierson

side, & ~~was~~ This opinion may compare  
soon as he quitted the school in the spring & went to work. - We have a  
fair prospect of getting through with our work sooner than we did last fall,  
& then Jeremiah & Daniel will go to the same school with George, & if  
Azell's health should be good I propose to continue him at school all  
next summer. We should be glad to send Phebe to her former teacher  
the ensuing six months, but her mother cannot spare her this winter.
