EXPLANATORY NOTE

This volume supplements a Check List on Chemical Warfare and Decontamination which was issued March 1, 1943.

Many important new works and other editions of issues previously cited have been acquired since the Check List was published and are included in this Supplement. The numbering of the entries in the Supplement is continued in sequence to those of the original issue.

Where the Library has been unable to secure at this time a copy of some important German or other foreign issue dealing with chemical warfare, microfilming has been employed; and such film is available in its Microfilm Reading Room.

No copy of volume two (Wissenschaftlicher teil) of the third edition of Der chemische krieg, a definitive work on the subject, by Dr. Rudolf Hanslian, can be located in this country. This confirms, in some measure, a report from a reliable and authoritative source that the German Government suppressed the issuance of this volume when it was about to be published. However, copies of some of the material to be used in this second volume (see publisher's announcement on last page of volume one [Militärischer teil], third edition, of Der chemische krieg) have now been secured by the Library and are found in this Supplement.

Official publications of Great Britain (which are arranged alphabetically by title) may be assumed to be published by His Majesty's Stationery Office unless otherwise noted.

Separate sections have been added to list outstanding general works on civilian defense which contain chapters on chemical warfare, important issues on military medicine covering the medical aspects of gas warfare, and reports, protocols, etc., of international conferences prohibiting the use of gas in war.
