TOXOPLASMOSIS

A bibliography of literature 1956 - September, 1960

Compiled by
Dorothy Bocker, M. D.

U. S. DEPARTMENT OF HEALTH, EDUCATION, AND WELFARE

Public Health Service
Washington, D. C.
November, 1960

INTRODUCTION

Toxoplasma gondii, a protozoan locating in endothelial tissue, was first isolated in North Africa and also in Brazil in 1909. It was not until 1940 that the first case of human infection was described; since then toxoplasmosis has been called the most frequent parasitic infection in the world.

This bibliography is designed for the use of professional workers in the fields of medicine and public health. English, French, German, Italian, and Spanish references were selected from the literature, and from indexes and catalogs available in the National Library of Medicine; the period covered is 1956-September 1960. Occasional brief annotations have been added to the entries which are listed under four broad headings.

DOROTHY BOCKER, M.D.
