PREFACE.

In compiling this dictionary of medicine, the publishers have endeavored to render a concise, yet perfectly comprehensive pronunciation and definition of each word classified.

A very complete list of medical terms is presented as in vogue at the date of publication.

Many of the very common medical words and terms have been omitted because their definitions are so well known as to obviate the necessity of their classification.

This is done in order that the work will be what its title signifies, viz., a medical dictionary that can be carried in the pocket.

We especially recommend "Warner's Pocket Medical Dictionary of To-day" to the student for class-room service and to the profession at large, to whom a larger dictionary is many times impracticable, because, being so bulky.

Diphthongs have been omitted, except in instances where the plural of a word is intended as amygdalæ, diarrhea, hemorrhage, etc., etc.

To the Medical Profession.

While presenting this Medical Dictionary we take opportunity to extend our thanks to our many friends who have aided us by their patronage and influence in distributing pharmaceutical preparations of the highest standard, and to express the hope that our efforts in this direction may continue to gain for us a confidence and feeling that our experience, covering as it has a period of thirty years and comprising deep scientific research and skilful manipulations, in conjunction with a conscientious desire to produce only the best, should at least warrant us in claiming a perfection of manufacture unexcelled.

Such facts are worthy the attention of practitioners who are called upon to battle with disease, and who must in using ready-prepared medicines depend upon the correctness of manufacture to gain the looked for therapeutical effects, whereby their own reputations are sustained and the ills of their patients alleviated.

It may be well, in this connection, to reiterate that our endeavors have always been directed towards the production of first-class preparations, regardless of cost, and passing the question of extreme cheapness which so often arises through competition and an anxiety to dispose of products; all of which very naturally has a tendency to depreciate quality correspondingly with the falling off in price.

We maintain that quality is of primary importance, and in this we flatter ourselves that we have received the undivided encouragement and support of an intelligent profession throughout the course of our business career.

With these few preliminary words outlining our policy, we beg leave to suggest the importance of specifying Warner & Co's make when ordering or prescribing effervescing salts or pills of any kind. We have special facilities for preparing in elegant form physician's favorite prescriptions.

Very respectfully,

INGLUVIN

From the Ventriculus Callosus Gallinaceus.

Superior to Pepsin of the Hog.

A Powder:—Prescribed in the same manner, doses, and combinations as Pepsin, 5 to 8 grains.

A SPECIFIC FOR VOMITING IN PREGNANCY,

(In doses of 10 to 20 grains in water, wine or milk),

AND A

Potent and reliable remedy for the cure of **INDIGESTION, DYSPEPSIA, and SICK STOMACH**, caused from debility of that organ. It is superior to the Pepsin Preparations, since it acts with more certainty, and effects cures where they fail.

We will take pleasure in sending to physicians a sample of Ingluvin sufficient for trial, to demonstrate the curative properties of this remedy in the various conditions for which it is indicated, but especially as a specific in vomiting of pregnancy.

(See next page for abstract from Prof. Roberts Bartholow's "Materia Medica and Therapeutics," 1879, 1889 and 1896.)

WM. R. WARNER & CO.,

PHILADELPHIA.

Prof. Roberts Bartholow, M. A., M. D., LL. D., in his work on *Materia Medica and Therapeutics*, says:—

1879 INGLUVIN—This is a preparation from the gizzard of the domestic chicken—*ventriculus callosus gallinaceus*. Dose, gr. v.—j.

Ingluvin has the remarkable property of arresting certain kinds of vomiting—notably the *vomiting of pregnancy*. It is a stomachic tonic, and relieves *indigestion, flatulence* and *dyspepsia*.

The author's experience is confirmatory of the statements which have been put forth regarding the exceptional power of this agent to arrest the vomiting of pregnancy. It can be administered in inflammatory conditions of the mucous membrane, as it has no irritant effect. Under ordinary circumstances, and when the object of its administration is to promote the digestive functions, it should be administered after meals. When the object is to arrest the vomiting of pregnancy, it should be given before meals.

1889 AND 1896 INGLUVIN is a * * preparation said to be made of the gizzard of the domestic chicken—*ventriculus callosus gallinaceus*. Dose, gr. v.—j. Ingluvin has the remarkable property of arresting certain kinds of vomiting—notably the *vomiting of pregnancy*. It is a stomachic tonic, and relieves *indigestion, flatulence* and *dyspepsia*.

Recent investigations have shown that Ingluvin owes its curative effects, not to any ferment corresponding to pepsin, but to a *peculiar bitter principle*. This result is the more satisfactory, since such an organ as the gizzard could hardly furnish the necessary quantity of a digestive ferment to effect the results now known to be produced by Ingluvin.

Under ordinary circumstances, and when the object of its administration is to promote the digestive function, it should be taken after meals. When the object is to arrest the vomiting of pregnancy, it should be given before meals.

But only the successful use of this agent and the apparent sincerity of the composition as given to the public would seem to justify its mention here.

Rheumatism, Gravel, Stone in the Bladder,
Lithemia, Bright's Disease, Etc.

Each tablet contains three grains of Citrate of Lithia, and affords a convenient method for administering a definite quantity of soluble Lithia in a pleasant form, besides the advantages of having fresh water with each dose; presenting a therapeutic value of a higher standard than the various spring waters, which oftentimes contain but an indefinite quantity of the needed salt.

Our Compressed Lithia Tablets are convenient for the preparation of artificial Lithia Water, useful in the treatment of subacute and chronic cases of Rheumatism, Rheumatic Gout, Uric Acid Diathesis, Renal Calculi composed of Uric Acid, and Irritable Bladder from excess of acid in the urine.

The dose is usually one tablet in a glass of pure water three times daily, except otherwise directed by the physician.

A tablet dropped in a glass of cold water will in a few moments entirely dissolve with effervescence, producing a sparkling draught.

The dose of artificial Lithia Water, as prepared from Warner & Co's Compressed Tablets, can be regulated very readily, by dissolving one or more in any desired quantity of water, from a tumblerful to a pint, quart or gallon, and taken as may be indicated.

PERFECTION IN PILL MAKING.

The manufacture of a perfect pill necessitates the skilful selection and preparation of all material entering into its composition. The use of proper excipients, which will not retard the disintegration and solubility of the mass, is of the highest importance, as it is upon these qualities the therapeutic effect depends, equally with the purity and excellence of the ingredients used. An excipient must not in any respect be incompatible with the ingredients and should not affect the stability, but rather tend to preserve the activity of the medicines comprised in the pill. Pure material, a careful and skilful preparation and combination of the ingredients are equal in importance to a perfect coating. The proper coating of a pill also demands skill and experience; the solubility should be rapid, the coating should be thin, whether of sugar or gelatin; at the same time it should not be affected by atmospheric conditions. Accurate composition and subdivision are also essential. Pills made by Wm. R. Warner & Co. have received the highest possible recognition, for their superiority and perfection in all respects, as a result of over forty years of experience in pill making.

Physicians are requested to specify Warner & Co., and order in bottles of 100 to avoid disappointment in the anticipated therapeutic effects.

SUMBUL ROOT

(The Root of *Ferula Sumbul*)

Nat. Ord. Umbelliferæ.

Common names—Sumbul,
Musk Root, Jatamansi.

DESCRIPTION.—The plant that produces the sumbul root is an herbaceous perennial, with an erect milk-bearing stem, and is a native of Central Asia. The leaves are mostly radical, large, and alternately decompound, with the ultimate segments narrow and toothed. The upper stem leaves are reduced merely to the sheathing bases of the petioles. The flowers are small yellow and disposed in compound umbels.

PROPERTIES AND USES—Sumbul is a stimulant and tonic to the nervous system; it has been recommended in gastric spasms, hysteria, delirium, diarrhoea, dysentery, leucorrhœa, chlorosis, asthma, chronic bronchitis, and other maladies, accompanied with an asthenic condition. In nervous diseases of a low, depressing character, it has been found very useful, especially in the following combination which we prepare in pill form. These pills are prescribed by leading physicians. Don't fail to specify Warner & Co., to avoid substitutes and disappointment.

PIL. SUMBUL COMP. (Dr. Goodell).

	Asafetida, 2 grs.	Ac. Arsenious, 1-40 gr.

"I use this pill for nervous and hysterical women who need building up." One or two pills three times a day. This pill is used with advantage in neurasthenic conditions in conjunction with occasional doses of Warner & Co.'s Bromo Soda, in cases of fatigue, loss of sleep, headache or indigestion.

PIL. SUMBUL APERIENT (Dr. Shoemaker.)

3 Grains. Dose.—1 to 4 Pills.

COMPOSITION :

Ferri Sulph. Fe SO_4	}	Ferri Carb. Fe CO_3
Potass. Carb. $\text{K}_2 \text{CO}_3$	}	= Potass. Sulph. $\text{K}_2 \text{SO}_4$

As prepared by WM. R. WARNER & Co., Philadelphia.

The above combination which we have successfully and scientifically put in pill form, produces when taken into the stomach, Carbonate of the Protoxide of Iron, (Ferrous Carbonate) in a quickly assimilable condition.

This pill contributed to make the reputation of Niemeyer, and the following language, which speaks without comment, is taken from his *Text Book on the Practice of Medicine*.

PROF. NIEMEYER says : " For more than twenty years I have used these pills almost exclusively in Chlorosis, and have witnessed such brilliant results from them in a large number of cases that I have never needed any opportunity to experiment with other articles. At Madgeburg and Greifswald I often had to send my recipe for the pills to a great distance, my good fortune in the treatment of Chlorosis—to which by the by, I owe the rapid growth of my practice—having given me great repute as the possessor of a sovereign remedy against that disease."

The dose of Pil. Chalybeate is from 1 to 4 at meal times and is recommended and successfully used in the treatment of Pulmonary Phthisis or Consumption, Anemia and Chlorosis, Caries and Scrofulous Abscesses, Chronic Discharges, Dyspepsia, Loss of Appetite, etc.

The physician may see that he is obtaining exactly what he prescribes, by ordering in bottles of 100 each.

CAUTION.—Specify WARNER & Co., and see to the special marks and autograph on wrapper. The coating is very soluble, and is colored a delicate pink.

Pills can be safely sent by mail, 40 cents per.100—discount for quantities.

Pil. Chalybeate Comp.

℞ (Chalybeate Mass.) Carb. Prot. of Iron, gr. iiss. Extract Nux Vomica,
gr. ⅓.

DOSE.—One or two pills may be prescribed three times a day. They should be taken immediately after eating.

It is truly stated by eminent practitioners that these pills will cause the pale lips to become red and the rosy flush of health to creep into the face in about two weeks' time.

La Progress Medicale :—"Iron is one of the most important principles of the organism and the only metal the presence of which is indispensable to the maintenance of life. It exists in all parts of the system, but nowhere does it acquire such importance as in the blood.

In a great number of diseases such as anemia, chlorosis, hemorrhages, debility, etc., it sometimes happens that the blood has lost half its iron, and, to cure these diseases, it is absolutely necessary to restore to the blood the iron which it lacks, and great care should be exercised that the most assimilable form of iron should be used, one that penetrates into the organism without unduly taxing the digestive tract or interfering with the essential qualities of the gastric juice."

In chloro-anemia, Warner's Pil. Chalybeate Comp. regenerates the diseased red globules of the blood with a rapidity not before observed under the use of other ferruginous preparations; it adds to their physiological power, and makes them richer in coloring matter. Moreover, being neither styptic nor caustic, and having no coagulating or astringent action on the gastro-intestinal mucous membrane, this preparation of iron causes neither constipation nor diarrhea as it does not need to be digested in order to be absorbed, it does not give rise to the sensation of weight in the stomach, or the gastric pain and indigestion occasioned by other preparations. In women who have not menstruated for many months, the amenorrhea disappears; in others suffering from an anemic state of long duration, by whom the ordinary preparations of iron have not been well borne, Warner's Pil. Chalybeate Comp. one or two after each meal, soon restore the digestive functions to their normal state.

The small quantity of Nux Vomica is added to increase the tonic effect, to give tone to the stomach and nerves and increase the appetite.

ARTHROSIA.

The attention of the Medical Profession is respectfully directed to this *non-secret* and valuable remedy in acute and chronic Gout, Rheumatism, Rheumatic Headache, Sciatica, Neuralgia and disorders of the Liver and Kidneys. The ingredients entering into its composition are each a well-known remedy in the cure of these painful and dangerous conditions, and this preparation is regarded as a specific.

ARTHROSIA CONSISTS OF

Acidum Salicylicum. (Salicylic Acid.)	Ext. Phytolacca. (Poke Root.)
Ext. Colchicum. (Meadow Saffron.)	Quinina. (Quinine.)
Resina Podophyllum. (May Apple.)	Capsicum. (Red Pepper.)

ARTHROSIA is permanently anti-lithic, a perfect antidote in Rheumatism and Gout, powerfully tonic, alterative and blood restorative. Arthrosia is prepared in pilular form for the convenience of physicians prescribing, and coated with the *superior* non-oxidizable and readily soluble coating of *sugar*.

Arthrosia is put up in bottles, simply labeled with directions for use. There are 100 pills in each, and the physician's directions are written by the pharmacist.

DIRECTIONS FOR USE OF ARTHROSIA.

Two to four pills at one dose, morning, noon and night, one hour before meals, and when the pain or suffering is very severe take two pills during the night. Its use should be persisted in until all inflammation and stiffness in the affected parts totally cease. The dose should be modified according to the purgative effect produced.

Price, 60 Cents. Sent by Mail.

PIL. DIGESTIVA

(WARNER & CO.)

R

Pepsin Conc't . . .	1 gr.	Gingerine . . .	$\frac{1}{16}$ gr.
Pv. Nuc. Vom. . .	$\frac{1}{4}$ gr.	Sulphur . . .	$\frac{1}{8}$ gr.

IN EACH PILL.

This combination is very useful in relieving various forms of Dyspepsia and Indigestion, and will afford permanent benefit in cases of enfeebled digestion, where the gastric juices are not properly secreted.

As a corrective of nausea or lack of appetite in the morning, induced by over indulgence in food or stimulants during the night, these pills are unsurpassed; they should be taken in doses of two pills before retiring, or in the morning at least one hour before eating; the first mentioned time is the most desirable as the effects are more decided, owing to the longer period for action and the natural rest is more fully experienced through their mild but effective influence.

As a dinner pill, Pil. Digestiva is unequalled and may be taken in doses of a single pill either before or after eating.

ELIXIR SALICYLIC COMP.

(WM. R. WARNER & CO.)

**A Potent and Reliable Remedy in Rheumatism, Gout,
Lumbago and Kindred Complaints.**

Combining in a pleasant and permanent form in each fluid drachm, the following :

℞	Acid. Salicylic. (Schering's),	grs. v.	Potass. Iodid.	-	grs. iss.
	Cimicifuga	- - -	Tr. Gelsemium.		gtt. i.
			Sodii Bicarb.		

This preparation is especially valuable for rheumatic diathesis and in the treatment of acute inflammatory, sub-acute and chronic rheumatism; any of which will yield to tablespoonful doses, every three or four hours, until four doses are taken; then a dessertspoonful at a time and finally decrease to a teaspoonful every three or four hours.

In acute inflammatory rheumatism, experience has proved that two tablespoonfuls administered every four hours, until a slight ringing in the ears follows, the dose then decreased to a tablespoonful every three or four hours, will produce the desired effects.

The advantages of Elixir Salicylic Comp. are afforded by the combination of Salicylic Acid with Soda in excess; thus forming a salt less corrosive and irritating, and more readily borne by the stomach.

The other ingredients possess advantages well known to the profession, to whom this preparation is alone introduced. We therefore suggest the propriety of specifying "Warner & Co's," and in ordering in $\frac{1}{3}$ xii quantities, to obtain original bottles.

PRICE, \$1.00 PER BOTTLE.

The best means of re-establishing digestion in enfeebled stomachs, where the power to assimilate and digest food is impaired, is to administer principles capable of communicating the elements necessary to convert food into nutriment.

The value of **Liquid Pancreopepsine** in this connection has been fully established, and we can recommend it with confidence to the profession as superior to pepsin alone. A NEW HYPODERMIC SYRINGE.

ASEPTIC, UNBREAKABLE, ACCURATE.

Always ready for use. No leather or rubber washer on piston. No glass to break at a critical moment.

Piston one solid piece of metal. Graduations marked, in minims and cubic centimeters, on piston.

The entire instrument can be boiled to produce sterilization; this in itself is a most important feature of the new instrument possessed by none of the o'd-fashioned syringes. Each syringe is packed in a handsome aluminum case, containing two needles and four tablet tubes.

The construction of the needle for this instrument presents another valuable addition, in that having a screw which forces the cone-shaped head against corresponding shoulder, making a perfectly air-tight and solid joint, doing away with the necessity of a leather or other washer.

The construction of the entire instrument is of metal, heavily nickel-plated, with the exception of a small cork ring in the cap on barrel of syringe, which upon being screwed down, tightens the ring around piston and serves to take up any possible wear.

Invented by DR. C. W. DENNIS.
