

A

GEOGRAPHICAL AND STATISTICAL ACCOUNT

OF THE

EPIDEMIC CHOLERA,

FROM ITS COMMENCEMENT IN INDIA

TO ITS ENTRANCE INTO THE UNITED STATES:

COMPREHENDED IN A SERIES OF

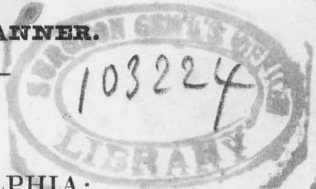

MAPS AND TABLES,

EXHIBITING THE NAMES OF PLACES VISITED BY THE
PESTILENCE—THE TIME OF ITS COMMENCEMENT—
THE NUMBER OF CASES, AND DEATHS, AND DURA-
TION, AT EACH PLACE.

COMPILED FROM A GREAT VARIETY OF

PRINTED AND MANUSCRIPT DOCUMENTS.

BY H. S. TANNER.

PHILADELPHIA:

PUBLISHED BY THE AUTHOR.

1832.

WCB

T164g

1832

Film no. 10707; Item 2

ENTERED according to Act of Congress, in the year 1832, by
H. S. TANNER, in the Clerk's Office of the Eastern District of
Pennsylvania.

ADVERTISEMENT.

AMONG the almost infinite variety of publications on the Epidemic Cholera, there is none, I believe, which gives any satisfactory account of the geographical progress, and statistical details, of the subject.

All the works that I have consulted, while engaged in drawing up the following tables, have manifestly been designed for medical practitioners, and hence, the gradual extension of the pestilence; its localities; the periods of its commencement and termination; the number of human beings who have been subjected to its attacks, and those who have become its victims, and other statistical facts, were either wholly disregarded in those compilations, or given in such a loose and unconnected manner, as to render a reference to them at once irksome and unprofitable.

The leading object of these tables is to give,

1. A concise view of the stations where the disease has shown itself, from its commencement in India to its entrance into the United States.

2. The dates of the origin and termination, at the several places which have been invaded by the disease.

3. The number of cases at each place.

4. The number of deaths; and

5. The duration of the pestilence at each place, so far as authentic data permitted.

To present an accurate and unbroken detail of matters, appropriate to these apparently simple heads, required much labour and research, and, although many important facts, in relation to the various subjects, are given in the tables, many unavoidable blanks will be observed, especially in the columns devoted to the number of cases and deaths, and the months.

In the arrangement of the materials, regard was had to the chronological order in which the epidemic appeared in each country, or series of countries. Thus, for example, the regions visited during the first period, embracing the years 1817 to 1829, inclusive, are indicated on the map by a green colour. Those of the second period, 1830, are coloured yellow. Those of the third period, 1831, blue; and those of the fourth period, 1832, including the United States, are coloured red. So that the disease may, by a reference to the map, be traced with facility, in its westward march, and the time of its invasion of each country readily distinguished.

The supplemental map of India, or Hindoostan, and that of the United States, were designed to give a more comprehensive view of those regions, than is afforded by the general map; the character and small scale of which, prevent that detailed representation of those interesting quarters, which a larger and more complete map enabled me to give.

The large map of the United States is coloured in such a manner, as to indicate each of the principal towns, which has been visited by the Cholera. This is done by a small red dot on the site of each place.

In indicating the various countries visited by the Cholera, it will be perceived, that I have coloured the entire surface of each, as represented by the map of the world, and thus avoided that common and absurd mode of delineating, by definite lines, *the exact route of the pestilence, from place to place!!* as exhibited by nearly all the maps hitherto published on the subject.

H. S. T.

PHILADELPHIA, October, 1832.

TABLE

Exhibiting the chief places visited by the Epidemic Cholera.

HINDOOSTAN.

* It is understood to be admitted, that the Reports of the Board of Health, of Washington, fall considerably short of the actual number of cases and deaths; as some of the physicians declined reporting. Drs. Sim and Thomas had attended, up to the 8th of Sept., 64 cases, 8 of which terminated fatally. These are not included in the above enumeration.
