

Pa Patient Saf Advis 2018 Mar;15(1).

## Safety Stories

"Safety Stories" (previously "Saves, System Improvements, and Safety-II") is an occasional feature in the *Pennsylvania Patient Safety Advisory*, highlighting successes of healthcare workers in keeping patients safe. The Safety-II approach assumes that everyday performance variability provides adaptations needed to respond to varying conditions and that humans are a resource for system flexibility and resilience.<sup>1</sup>

### What's Missing?

The following event report, submitted through the Pennsylvania Patient Safety Reporting System (PA-PSRS),\* illustrates the value of a systems perspective:

*Upon collecting a patient's specimen, the RN [registered nurse] noted that the buffer vial did not contain liquid buffer. She obtained another collection kit, collected the specimen, and submitted it to the lab for testing. Staff examined the other collection kits and found another buffer vial that was empty. Lab Director notified the manufacturer.*

It can be difficult to identify when a component of a system is missing. It is often easier to identify that a part is present, but is crooked or the wrong size or color. The Authority applauds this nurse for her alertness in recognizing that a necessary element of a vial was missing.

In addition, the Authority congratulates this nurse and her facility team for not just improving safety for the single patient who was almost affected, but for applying a systems perspective by investigating whether other vials might have a similar problem. After finding more than one problematic vial, the facility notified the manufacturer, so that the problem could be evaluated and mitigated at the point of manufacture. This system perspective will likely enhance the safety of patients in multiple facilities.

The Authority commends the nurse and her facility for recognizing a problem and seeking to correct the problem at its source.
